Preface ix

Guide for the Reader xiii

I A Comprehensive Introduction 1

1 A Comprehensive Introduction 3
- 1.1 The Potential Theory Setting 4
- 1.2 The Differential Operator Setting 5
- 1.3 The Correspondence Principle 7
- 1.4 Canonical Operators 9
- 1.5 Gradient-Free Operators 14
- 1.6 Operators Involving Gårding–Dirichlet Polynomials 15
- 1.7 General Potential-Theoretic Comparison Theorems 20
- 1.8 Limitations of the Method and Comparison with the Literature 24
- 1.9 Reflections on "Potential Theory versus Operator Theory" 28

II The Potential Theory Approach 33

2 Constant-Coefficient Constraint Sets and Their Subharmonics 35

3 Dirichlet Duality and $\mathcal{F}$-Subharmonic Functions 42

4 Monotonicity Cones for Constant-Coefficient Subequations 50
- 4.1 The Maximal Monotonicity Cone Subequation 51
- 4.2 Product Monotonicity Cone Subequations 54

5 A Fundamental Family of Monotonicity Cone Subequations 56
- 5.1 Construction of the Fundamental Family 56
- 5.2 Nesting, Limit Cases, and Simplifying the Family of Cones 59
- 5.3 The Fundamental Nature of the Family of Monotonicity Cones 61

6 The Zero Maximum Principle for Dual Monotonicity Cones **64**

7 Comparison Principles for Potential Theories with Sufficient Monotonicity **69**

8 Comparison on Arbitrary Domains by Additional Monotonicity **75**

9 Failure of Comparison with Insufficient Maximal Monotonicity **79**
9.1 Finite R and Failure of Comparison on Large Domains 79
9.2 Failure of Comparison on Arbitrarily Small Domains 82

10 Special Cases: Reduced Constraint Sets **86**
10.1 Pure Second Order 86
10.2 Gradient-Free 89
10.3 First Order and Pure First Order 93
10.4 Zero-Order-Free 95
10.5 Summary 96

III Marrying Potential Theory to Operator Theory via the Correspondence Principle **99**

11 The Correspondence Principle for Compatible Operator-Subequation Pairs **101**
11.1 Compatible Operator-Subequation Pairs and Topological Tameness 102
11.2 The Correspondence Principle for Compatible Pairs 107
11.3 A Structure Theorem Derived from Subequation Monotonicity 109
11.4 Canonical Operators for Subequations with Monotonicity 112
11.5 Lipschitz Regularity of Subequation Boundaries 120
11.6 Gårding–Dirichlet Operators 125
11.7 Subequation Branches 131

IV Applications to PDEs **133**

12 Comparison Principles for Operators with Sufficient Monotonicity **135**
12.1 Proper Elliptic Gradient-Free Operators 136
12.2 Degenerate Elliptic Operators with Strict Monotonicity in r 141
12.3 Proper Operators with Some Degree of Strict Ellipticity 143
12.4 From Linear Operators to Hamilton–Jacobi–Bellman Operators 148

12.5 Proper Elliptic Operators with Directionality in the Gradient 160
12.6 Parabolic Operators 165

Appendix **171**

A Existence Holds and Uniqueness Implies Comparison **173**

B Failure of Comparison on Small Balls: Radial Proof **177**

C Equivalent Definitions of $\mathcal{F}$-Subharmonic Functions **181**

D Elementary Properties of $\mathcal{F}$-Subharmonic Functions **185**

Bibliography **191**

Index **199**
