Contents

Part I (Planar) Maps

1 Discrete Random Surfaces in High Genus 3
1.1 What Is a Map? Different Points of View 3
1.1.1 Gluing of Polygons and a First Exploration 3
1.1.2 Other Definitions of Maps 8
1.1.3 Duality 9
1.2 Geometry and Topology of Uniform Maps 10
1.2.1 Enumeration "à la Tutte" 11
1.2.2 Uniform Maps Are Almost Uniform Permutations 12
1.3 Exploring Random Maps with Prescribed Faces and a Conjecture 15
1.3.1 Random Gluing of Prescribed Polygons 15
1.3.2 Peeling Explorations of $\mathbf{M}_{\mathcal{P}}$ 17
1.3.3 Examples of Peeling Explorations 18

2 Why Are Planar Maps Exceptional? 21
2.1 Finite and Infinite Planar Maps 21
2.1.1 Finite Planar Maps 21
2.1.2 Local Topology and Infinite Maps 23
2.1.3 Infinite Maps of the Plane and the Half-Plane 25
2.2 Euler's Formula and Applications 27
2.2.1 k-Angulations and Bipartite Maps 27
2.2.2 Platonic Solids 28
2.2.3 Fàry Theorem 30
2.2.4 6–5–4 Color Theorem 31
2.2.5 Moser's circle 31
2.3 Faithful Representations of Planar Maps 31
2.3.1 Tutte's Barycentric Embedding 32
2.3.2 Circle Packing 33

3 The Miraculous Enumeration of Bipartite Maps 37
3.1 Maps with a Boundary and a Target 37
3.1.1 Maps with a Boundary 38
3.1.2 Maps with a Target 39
3.2 Counting Planar Maps and Tutte's Equation 40
3.2.1 The Case of Quadrangulations 40
3.2.2 Boltzmann Maps and Tutte Slicing Formula 42
3.3 Formulas for Disk Partition Functions 42
3.3.1 Boltzmann Measure 43
3.3.2 Admissibility 44
3.4 Getting Our Hands on $W^{(\ell)}$ 47
3.4.1 Towards an Expression for $W^{(\ell)}$ 48
3.4.2 Back to the Admissibility Criterion 49
3.5 Examples 50
3.5.1 $2p$-Angulations 50
3.5.2 Uniform Bipartite Maps 51
3.5.3 Triangulations 52
3.5.4 Canonical Stable Maps 53

Part II Peeling Explorations

4 Peeling of Finite Boltzmann Maps 59
4.1 Peeling Processes 59
4.1.1 Gluing Maps with a Boundary 59
4.1.2 Peeling Process 61
4.1.3 Peeling Process with a Target and Filled-in Explorations 64
4.2 Law of the Peeling Under the Boltzmann Measures 65
4.2.1 **q**-Boltzmann Maps 65
4.2.2 **q**-Boltzmann Maps Without Target 66
4.2.3 **q**-Boltzmann Maps with Target 67
4.3 Simple Submaps and Simple Peeling Explorations 68
4.3.1 Maps with Simple Boundary 68
4.3.2 Simple Submaps 69
4.3.3 Simple Peeling Exploration 70
4.3.4 Law of the Simple Peeling Under the Boltzmann Measure 71

5 Classification of Weight Sequences 73
5.1 The ν-Random Walk 73
5.1.1 The Step Distribution ν 73
5.1.2 Probabilistic Interpretation of the $h_p^{\downarrow}$-Transformation 75
5.2 Critical Weight Sequences 76
5.2.1 Equivalent Definitions of Criticality 77
5.2.2 $h^{\uparrow}$-Transform 78

5.3 Discrete Stable Weight Sequences 79
5.3.1 Subcritical Case: $a = \frac{3}{2}$ 80
5.3.2 Critical Generic Case: $a = \frac{5}{2}$ 81
5.3.3 Critical Non-generic: $a \in (3/2; 5/2)$ 82
5.3.4 Examples 83

Part III Infinite Boltzmann Maps

6 Infinite Boltzmann Maps of the Half-Plane 87
6.1 The Half-Planar Boltzmann Map 88
6.1.1 Characterizing $\mathbb{P}^{(\infty)}$ 88
6.1.2 Peeling Process Under $\mathbb{P}^{(\infty)}$ 90
6.1.3 Constructing $\mathbb{P}^{(\infty)}$ 91
6.1.4 $\mathbb{P}^{(\infty)}$ as the Weak Limit of $\mathbb{P}^{(\ell)}$ as $\ell \to \infty$ 94
6.2 Basic Properties 95
6.2.1 Translation Invariance and Ergodicity 95
6.2.2 Cut-Edges and Cut-Points 96

7 Infinite Boltzmann Maps of the Plane 99
7.1 Infinite Boltzmann Maps of the Plane 100
7.1.1 Characterizing $\mathbb{P}_{\infty}^{(\ell)}$ 101
7.1.2 Peeling Process Under $\mathbb{P}_{\infty}^{(\ell)}$ 101
7.1.3 Constructing $\mathbb{P}_{\infty}^{(\ell)}$ 102
7.1.4 $\mathbb{P}_{\infty}^{(\ell)}$ as the Limit of Maps Conditioned to be Large 103
7.2 Basic Properties 104
7.2.1 Stationarity and Reversibility 105
7.2.2 Ergodicity 106

8 Hyperbolic Random Maps 109
8.1 Constructions 111
8.2 Basic Properties 113
8.2.1 Stationarity, Reversibility and Ergodicity 113
8.2.2 Anchored Expansion 114

9 Simple Boundary, Yet a Bit More Complicated 117
9.1 Enumeration of Maps with a Simple Boundary 118
9.1.1 The Core Decomposition 118
9.1.2 Free Boltzmann Map and Exploration of the Core 120
9.2 Infinite ∂-Simple Boltzmann Maps of the Half-Plane 126
9.2.1 Defining $\widetilde{\mathfrak{M}}^{(\infty)}$ and $\hat{\mathfrak{M}}^{(\infty)}$ 126
9.2.2 Simple Peeling Exploration of $\hat{\mathfrak{M}}^{(\infty)}$ 130
9.2.3 $\hat{\mathbb{P}}^{(\infty)}$ as the Weak Limit of $\hat{\mathbb{P}}^{(\ell)}$ 133
9.3 Basic Properties 134

10 Scaling Limit for the Peeling Process 135
10.1 Invariance Principles for the Perimeter Process 135
10.1.1 The Case of the ν-Walk S 135
10.1.2 The Cases of $S^{\uparrow}$ and $S^{\downarrow}$ 138
10.2 Scaling Limit for the Volume Process 139
10.2.1 Stable Limit for the Volume of Boltzmann Maps 139
10.2.2 Functional Scaling Limit for the Volume and Perimeter Processes 142
10.2.3 Law of "Iterated" Logarithm 144
10.3 Scaling Limits in the Hyperbolic Regime 147
10.4 Markovian Explorations Are Always Roundish 148

Part IV Percolation(s)

11 Percolation Thresholds in the Half-Plane 153
11.1 Prerequisites 153
11.1.1 Randomized Peeling Process 153
11.1.2 Mean Gulp and Exposure 154
11.2 Face Percolation 155
11.2.1 Annealed Threshold and Exploration of Face Percolation 156
11.2.2 Proof of Theorem 11.3 159
11.2.3 Dual Exploration 160
11.2.4 Degree Percolation 161
11.3 Bond Percolation 162
11.3.1 A Heuristic Before the Proof: Adding Faces of Degree 2 162
11.3.2 The True Proof: Adding Crosses! 165
11.4 Site Percolation and the Simple Peeling 169
11.4.1 Back to Bond and Face Percolations 170
11.4.2 Site Percolation 172

12 More on Bond Percolation 177
12.1 Critical Exponents in the Half-Plane 178
12.1.1 Length of Exploration 178
12.1.2 More Open Questions 180
12.2 A Boltzmann Approach to Bond Percolation 181
12.2.1 Duality of Stable Maps Via Percolation 182
12.2.2 Critical Exponents and Open Questions 183
12.3 Percolations on $\mathfrak{M}_{\infty}$ 185
12.3.1 Do Plane and Half-Plane Bond Percolation Thresholds Coincide? 185
12.3.2 Open Questions 189
12.4 Percolation on Hyperbolic Random Maps 189
12.4.1 Critical and Uniqueness Thresholds 190
12.4.2 Open Questions 191

Part V Geometry

13 Metric Growths 195
13.1 Eden Model: Exponential FPP Distances on the Dual 195
13.1.1 Definition of the Eden Distance 196
13.1.2 Uniform Peeling 196
13.1.3 Fpp Growth on $\mathfrak{M}_\infty$ 199
13.1.4 Fpp Growth on $\mathfrak{H}_\infty$ 203
13.2 Dual Graph Distances 204
13.2.1 Exploration of Dual Metric 205
13.2.2 Growth of the Dual Metric in $\mathfrak{M}_\infty$ 207
13.2.3 Growth of the Dual Metric on $\mathfrak{H}_\infty$ 210
13.2.4 Cut-Points in the Dense Phase 210
13.3 Primal Graph Distances 211
13.3.1 Triangulations 212
13.3.2 Quadrangulations 213
13.3.3 General Case 214
13.4 ... and for the Half-Plane ? 216

14 A Taste of Scaling Limit 217
14.1 Gromov–Hausdorff Topology 217
14.1.1 Space of Metric Spaces 217
14.1.2 Gromov–Hausdorff Topology 218
14.1.3 Properties 219
14.2 Scaling Limits for Large Boltzmann Maps 220
14.2.1 The Brownian Sphere 220
14.2.2 The Stable Maps 222
14.3 Scaling Limit for Dual Maps and Growth-Fragmentation Trees ... 223
14.3.1 Genealogy on Holes 223
14.3.2 Slicing at Heights 225

Part VI Simple Random Walk

15 Recurrence, Transience, Liouville and Speed 229
15.1 $\mathfrak{M}_\infty$ Is Recurrent 231
15.1.1 Discrete Uniformization of Infinite Planar Graphs 231
15.1.2 Benjamini–Schramm Limits 232
15.2 Simple Random Walk on $\mathfrak{M}_\infty^\dagger$ 235
15.2.1 Transience of $\mathfrak{M}_\infty^\dagger$ in the Dense Case 235
15.2.2 Intersection and Recurrence 236
15.3 Hyperbolic Maps and Positive Speed 238
15.3.1 Anchored Expansion, Speed and Stationarity 238

16 Subdiffusivity and Pioneer Points 241
16.1 Pioneer Points and Subdiffusivity 244
16.1.1 Pioneer Points 244
16.1.2 Primal Distances 245

16.1.3 About Tentacles 246
16.2 Subdiffusivity via Stationarity 246
16.2.1 Subdiffusivity from Diffusivity on a Sparse Subgraph ... 246
16.2.2 Heuristic for $\mathcal{G}_R$ 248

A Elements of Fluctuation Theory 251
A.1 Oscillations, Duality 251
A.2 Cyclic Lemma and Applications 254
A.2.1 Feller's Cyclic Lemma 254
A.2.2 Applications 256
A.3 Random Walks Conditioned to Stay Positive 258
A.3.1 h-Transform of Markov Chains 258
A.3.2 Renewal Function 259
A.3.3 Oscillating Case and Limit of Large Conditionings 260
A.3.4 Tanaka's Construction 262
A.3.5 Drift to $-\infty$ and Cramér's Condition 263
A.4 Ratio and Local Limit Theorem 264
A.4.1 Strong Ratio Limit Theorem 265
A.4.2 Local Limit Theorem 266

B Coding of Bipartite Maps with Labeled Trees 269
B.1 Bouttier–Di Francesco–Guitter Coding of Bipartite Maps 269
B.1.1 From Maps to Trees 269
B.1.2 From Trees to Maps 270
B.2 Distribution of the Forest of Mobiles 272
B.2.1 Janson and Stefansson's Trick 272
B.2.2 Law of the Unlabeled Forest 273
B.3 Back to the Enumeration Results 274
B.3.1 Back to the Admissibility Criterion 274
B.3.2 Interpretation of the Law J and Back to Criticality 275

Bibliography 277
