About the Cover	ii
About the Authors	v
Introduction: Looking Toward the Future	vi–vii
Acknowledgments	vii
Chapter 1. Traditional and Digital Color Prints, Color Negatives, and Color Slides: Which Products Last Longest?	1
The Hidden Problem: Simply Looking at a Beautiful Color Photograph Provides Absolutely No Indication of How Long It Will Retain Its Original Brilliance — Whether Exposed to Light on Display or Stored in the Dark	
Chapter 1 Recommendations:	3
Chapter 2. Accelerated Tests for Measuring Light Fading, Dark Fading, and Yellowish Stain Formation in Color Prints and Films	61
Chapter 3. Light Fading Stability of Displayed Color Prints	101
Light-Induced Cracking of RC Papers: Is It Still a Problem with Color Prints?	
Chapter 4. The Effects of Print Lacquers, Plastic Laminates, 3M Photogard, and UV-Absorbing Plastic Filters	145
The Myth of UV Protection for Ektacolor, Fujicolor, and Similar Color Prints	
Chapter 4 Recommendations:	147
Chapter 5. Dark Fading and Yellowish Staining of Color Prints, Transparencies, and Negatives	163
Chapter 6. Projector-Caused Fading of 35mm Color Slides	211
Fujichrome Films Have the Longest Life When Projected	
Chapter 6 Recommendations:	213
Chapter 7. Monitoring the Long-Term Fading and Staining of Color Photographs in Museum and Archive Collections	239
Similar Procedures Can Be Employed with Black-and-White Prints	
Chapter 7 Recommendations:	241
Chapter 8. Color Print Fading and the Professional Portrait and Wedding Photographer – What to Do About a Troubling Situation	267
Fujicolor SFA3 Papers Are by Far the Longest-Lasting Color Negative Papers Available	
Chapter 8 Recommendations:	279
Chapter 9. The Permanent Preservation of Color Motion Pictures	299
Low-Temperature, Humidity-Controlled Storage of Original Camera Negatives, Color Reversal Originals, Laboratory Intermediates, and Release Prints Is the Only Viable Way to Keep Color Motion Pictures Unchanged for Many Hundreds or Even Thousands of Years	
Chapter 9 Recommendations:	301
Chapter 10. The Extraordinarily Stable Technicolor Dye-Imbibition Motion Picture Color Print Process (1932–1978)	345
Chapter 10 Recommendations:	347

Contents

Chapter 11. Print Mounting Adhesives and Techniques, Tapes, Rubber Stamps, Pencils, Inks, and Spotting Methods for Color and B&W Prints	367
Chapter 11 Recommendations:	369
Chapter 12. The Handling, Presentation, and Conservation Matting of Photographs <i>By Carol Brower</i>	393
Chapter 13. Composition, pH, Testing, and Light Fading Stability of Mount Boards and Other Paper Products Used with Photographs <i>By Carol Brower and Henry Wilhelm</i>	451
Chapter 13 Recommendations:	453
Chapter 14. Envelopes and Sleeves for Films and Prints	485
Chapter 14 Recommendations:	485
Chapter 15. Framing Materials, Storage Boxes, Portfolio Cases, Albums, Cabinets, and Shelves	509
Chapter 15 Recommendations:	511
Chapter 16. The Storage Environment for Photographs: Relative Humidity, Temperature, Air Pollution, Dust, and the Prevention of Fungus	539
Chapter 16 Recommendations:	544
Chapter 17. Display and Illumination of Color and Black-and-White Prints The Alarming Light-Induced Image Discoloration and Base Cracking of B&W RC Prints on Long-Term Display	575
Chapter 17 Recommendations:	577
Chapter 18. Handling and Preservation of Color Slide Collections Selection of Films, Slide Mounts, Slide Pages, and Individual Slide Sleeves	625
Chapter 18 Recommendations:	629
Chapter 19. Frost-Free Refrigerators for Storing Color and Black-and-White Films and Prints Appendix 19.1: Freezer Storage for Permanent Preservation of Cellulose Nitrate Still-Camera Negatives and Motion Pictures	655
Chapter 19 Recommendations:	658
Chapter 20. Large-Scale, Humidity-Controlled Cold Storage Facilities for the Permanent Preservation of B&W and Color Films, Prints, and Motion Pictures	687
Chapter 20 Recommendations:	697
