

CONTENTS

Chapter 1	
THE NATURE OF OPERATIONS RESEARCH	1
1.1 Introduction	1
1.2 The Need for Operations Research	2
1.3 The Scientific Method, Models and Operations Research.....	7
1.4 The Methodology of Operations Research.....	9
1.5 Basic Model Types of Operations Research.....	15
Problems	17
Chapter 2	
ALLOCATION MODELS	18
2.1 Introduction	18
2.2 Linear Programming Models	20
2.3 Geometric Interpretation of Linear Programming Models.....	34
Problems	38
Chapter 3	
SOLUTION OF LINEAR PROGRAMMING MODELS	46
3.1 Obtaining Solutions to Linear Programming Problems	46
3.2 Obtaining Solutions to Transportation Problems	56
Problems	67
Chapter 4	
ADDITIONAL ALLOCATION MODELS	70
4.1 Geometric Interpretation of Integer Linear Programming Models	70
4.2 Uses of Integer Programming in Model Formulation	71
4.3 Solving Allocation Models by Dynamic Programming	77
Problems	81
Chapter 5	
NETWORK MODELS	86
5.1 Introduction	86
5.2 The Maximum Flow Problem.....	86
5.3 An Algorithm for the Maximum Flow Problem	89
5.4 The Shortest Path Problem	94
	vii

5.5 A Solution Technique for the Shortest Route Problem.....	99
5.6 The Transportation Problem	103
5.7 The Transshipment Problem	104
5.8 The Assignment Problem.....	107
Problems	110
 Chapter 6	
LOCATION MODELS.....	124
6.1 Introduction	124
6.2 Single Source Continuous Location Problems	126
6.3 Multiple Source Continuous Location Problems	132
6.4 Feasible Set Formulation of Location Problems	140
6.5 Generalizations of Continuous Location Problems	142
Problems	144
 Chapter 7	
SCHEDULING MODELS.....	148
7.1 Introduction	148
7.2 Job Shop Scheduling Models.....	148
7.3 CPM: Critical Path Method.....	157
7.4 Employee Scheduling	162
7.5 The Traveling Salesman Problem.....	167
Problems	171
 Chapter 8	
EMPIRICAL PROBABILITY MODELS.....	179
Problems	196
 Chapter 9	
SIMPLE PROBABILITY MODELS.....	202
9.1 Model Development	202
9.2 Determination of Model Parameters	220
9.3 Model Validation	224
Problems	229
 Chapter 10	
PROBABILISTIC DECISION MODELS.....	234
10.1 Basic Probability Concepts	234
10.2 Conditional Probability and Independence.....	238
10.3 Bayes' Theorem and Applications	243
10.4 Decision Making Using Expected Values.....	246
10.5 Strategies for Decision Making.....	254
10.6 Decision Trees	257
Problems.....	260

Chapter 11	
MARKOV MODELS	268
11.1 Stochastic Process.....	268
11.2 Markov Models with Discrete Index Parameters.....	271
11.3 Markov Models with Continuous Index Parameters.....	287
Problems.....	290
Chapter 12	
QUEUING MODELS	298
12.1 Introduction.....	298
12.2 Model Structure and Description.....	303
12.3 System Performance and Improvement.....	306
Problems.....	321
Chapter 13	
INVENTORY MODELS	325
13.1 Introduction.....	325
13.2 The Economic Order Quantity Model.....	326
13.3 The Economic Order Quantity Model with Shortages.....	330
13.4 A Multi-Period Model.....	332
13.5 A Single Period Stochastic Inventory Model.....	338
Problems.....	350
Chapter 14	
CASE STUDIES IN OPERATIONS RESEARCH	355
Case Study 1—A Multi-Period Production–Inventory Model.....	355
Case Study 2—Shell Oil’s Multiproduct Distribution Problem.....	360
Case Study 3—An Analysis of the Parking Situation in the Downtown Area of West Berlin.....	366
Case Study 4—A Location Study.....	373
Case Study 5—A Queuing Study.....	376
APPENDIX	385
INDEX	401
