

# CONTENTS

INTRODUCTION TO THE SERIES . . . . .	v
PREFACE TO THE FIRST ENGLISH EDITION . . . . .	vii
PREFACE TO THE SECOND ENGLISH EDITION . . . . .	xiii
LIST OF TABLES . . . . .	xxv
SIGNS AND SYMBOLS . . . . .	xxix

## PART 1: TRADITIONAL METHODS AND INPUT-OUTPUT TABLES

### *Chapter 1*

THE TRADITIONAL PLAN INDEX SYSTEM . . . . .	5
1.1. The main groups of indices . . . . .	5
1.2. The consistency of the index system . . . . .	11
1.3. The plan as an equation system . . . . .	13
1.4. Plan coordination . . . . .	17

### *Chapter 2*

THE TRADITIONAL INVESTMENT EFFICIENCY CALCULATIONS . . . . .	22
2.1. Central permits for the main investments . . . . .	22
2.2. The index $\theta_n$ . . . . .	23

### *Chapter 3*

INPUT-OUTPUT TABLES . . . . .	28
3.1. Main definitions . . . . .	28
3.2. Total contents calculations . . . . .	30
3.3. The characteristics of the breakdown by sectors . . . . .	32
3.4. The "chessboard" balance broken down by authorities . . . . .	34
3.5. Interbranch balances . . . . .	37
3.6. Balance based on breakdown by products . . . . .	38
3.7. Checking the consistency of the plan . . . . .	40
3.8. Other input-output tables . . . . .	42

### *Chapter 4*

THE "FOOTHOLDS" OF MATHEMATICAL PLANNING . . . . .	43
--	----

## PART 2: SECTORAL PROGRAMMING MODELS

*Chapter 5*

<b>THE CHOICE BETWEEN TECHNOLOGICAL ALTERNATIVES. THE MODEL FOR THE COTTON INDUSTRY</b> . . . . .	51
5.1. Decision problems . . . . .	51
5.2. The scope of programming . . . . .	52
5.3. Activities, the variables of the model . . . . .	55
5.4. External constraints . . . . .	58
5.5. Internal constraints . . . . .	62
5.6. The objective function . . . . .	64
5.7. The mathematical summary of the problem . . . . .	67
5.8. The practical results of programming in the cotton industry . . . . .	68

*Chapter 6*

<b>THE PROPORTIONS OF PRODUCTION, EXPORTS AND IMPORTS. THE MODEL OF THE MAN-MADE FIBRES INDUSTRY</b> . . . . .	74
6.1. Decision problems . . . . .	74
6.2. The scope of programming . . . . .	76
6.3. The activities . . . . .	78
6.4. The constraints . . . . .	79
6.5. The objective function . . . . .	82
6.6. The practical results of programming in the man-made fibres industry . . . . .	83

*Chapter 7*

<b>COSTS AS A FUNCTION OF THE ACTIVITY LEVEL</b> . . . . .	85
7.1. The subject and arrangement of the treatment . . . . .	85
7.2. Common simplifying assumptions . . . . .	86
7.3. The classification of cost functions from the mathematical and computational point of view . . . . .	89
7.4. The characteristic development of costs for various types of activity . . . . .	96
7.5. The consideration of the advantages of mass production in the man-made fibres industry . . . . .	100
7.6. Determination of the parameters of the function . . . . .	107

*Chapter 8*

<b>FIRST COMPARISON WITH THE TRADITIONAL METHODS</b> . . . . .	110
8.1. Broader opportunities for choices . . . . .	110
8.2. Choice based on simple ranking . . . . .	114
8.3. The balance method and the requirement of economic efficiency . . . . .	117
8.4. The connection between the sector programming model and the traditional plan index system . . . . .	119
8.5. The computing-technical limitations . . . . .	121

## PART 3: THE TREATMENT OF UNCERTAIN DATA

*Chapter 9*

THE DIFFICULTIES OF DETERMINING TECHNICAL AND COST DATA . . . . .	127
9.1. The mechanism of data supply . . . . .	127
9.2. Random and tendentious errors in estimation . . . . .	129
9.3. Promoting unbiased work . . . . .	136

*Chapter 10*

SENSITIVITY ANALYSIS. PARAMETRIC PROGRAMMING . . . . .	139
10.1. Serial calculations . . . . .	139
10.2. Parametric programming . . . . .	140
10.3. Some practical examples . . . . .	143
10.4. The "neighbourhood" of the optimum . . . . .	147
10.5. The significance of sensitivity analysis . . . . .	148

*Chapter 11*

"PESSIMISTIC" AND "OPTIMISTIC" RANKING . . . . .	149
11.1. The problem of decisions with uncertain consequences . . . . .	149
11.2. The "from-to" form of estimation . . . . .	150
11.3. Ranking in the man-made fibres industry . . . . .	152
11.4. First selection . . . . .	155
11.5. The safety ranking of alternatives . . . . .	156
11.6. The deficiencies of the procedure . . . . .	159

*Chapter 12*

SAFETY PROGRAMMING (Co-author: TH. LIPTÁK) . . . . .	161
12.1. Survey of the exposition . . . . .	161
12.2. The justification for applying probabilistic methods . . . . .	161
12.3. Uncertainty and probability . . . . .	165
12.4. The model of safety programming . . . . .	169
12.5. The economic interpretation of safety programming . . . . .	171

*Chapter 13*

SAFETY AND RISK-TAKING . . . . .	176
13.1. A diagrammatic representation of safety strategy . . . . .	176
13.2. Executives interviewed . . . . .	177
13.3. The justification for risk-aversion . . . . .	182

*Chapter 14*

STOCHASTIC CALCULATIONS IN PRACTICE . . . . .	187
14.1. Supplementary assumptions . . . . .	187
14.2. The problem narrowed down . . . . .	188

14.3. The most important calculations . . . . .	190
14.4. The effects of the concentration of activities . . . . .	194
14.5. A methodological remark . . . . .	196
<i>Chapter 15</i>	
SECOND COMPARISON WITH THE TRADITIONAL METHODS . . . . .	198

#### PART 4: COMPUTATIONAL EVALUATIONS

##### *Chapter 16*

THE GENERAL ACCOUNTING PRINCIPLES OF THE COMPUTATIONAL PRICE SYSTEM	207
16.1. The role of the accounting principles . . . . .	207
16.2. The general formula of the computational price . . . . .	208
16.3. The sphere of application of foreign-trade prices . . . . .	211
16.4. The treatment of the dynamics of inputs . . . . .	214
16.5. The further course of the exposition . . . . .	217

##### *Chapter 17*

DETERMINATION OF TOTAL PRODUCTION-FUND REQUIREMENTS AND OF TOTAL WAGE CONTENTS . . . . .	218
17.1. An outline of the problem . . . . .	218
17.2. The use of input-output tables . . . . .	219
17.3. Simplifying assumptions concerning input-output tables . . . . .	222
17.4. Partial "tracing back" . . . . .	227
17.5. The traditional method of "real cost calculation" . . . . .	229
17.6. The official methodology of investment efficiency calculations . . . . .	232

##### *Chapter 18*

ATTEMPTS AT THE DETERMINATION OF THE COMPUTATIONAL RENTAL ON CAPITAL AND OF THE COMPUTATIONAL WAGE FACTOR . . . . .	234
18.1. Objective of the analysis . . . . .	234
18.2. The aggregate production function of the national economy . . . . .	236
18.3. The definition and feasibility of the rational computational rental on capital and wage rate . . . . .	241
18.4. On the ratio of the rental on capital and the wage rate . . . . .	247
18.5. First experiment: Observation of the "capital market" . . . . .	248
18.6. Second experiment: Conclusion from plan-variants . . . . .	253
18.7. Third experiment: Conclusion from the distribution of national income . . . . .	255
18.8. Fourth experiment: Conclusion drawn from the growth rate of the national economy. Description of the model . . . . .	258
18.9. Fourth experiment: Conclusion from the growth rate of the national economy. The propositions . . . . .	263
18.10. Fifth experiment: Statistical investigation . . . . .	266

18.11. Sixth experiment: The determination of computational evaluations through mathematical programming . . . . .	269
18.12. Accounting principles . . . . .	270
18.13. General conclusions . . . . .	273
18.14. Sensitivity analyses . . . . .	274

### Chapter 19

IMPORT MATERIAL COSTS. FOREIGN TRADE PRICES . . . . .	279
19.1. The problem surveyed . . . . .	279
19.2. What should be regarded as a foreign trade price? . . . . .	280
19.3. Characteristic trends of price movements . . . . .	282
19.4. Price trends of new commodity types . . . . .	283
19.5. The forms and bases of estimation . . . . .	292
19.6. The indirect import material costs . . . . .	300

### Chapter 20

THE COMPUTATIONAL FOREIGN EXCHANGE RATE . . . . .	301
20.1. The necessity of uniform foreign exchange rates . . . . .	301
20.2. The economic contents of the rate of exchange . . . . .	304
20.3. Determination of foreign exchange rates by means of the input-output table . . . . .	305
20.4. The program's foreign exchange-rate sensitivity . . . . .	307

### Chapter 21

THIRD COMPARISON WITH THE TRADITIONAL METHODS . . . . .	310
21.1. Divergences from the actual prices . . . . .	310
21.2. The rational relationship between computational and actual prices . . . . .	314

## PART 5: CONNECTING ECONOMY-WIDE AND SECTORAL PROGRAMMING

### Chapter 22

THE CENTRAL PLAN FIGURE AS A PARAMETER . . . . .	323
22.1. Some practical examples from the material of the sectoral programming projects . . . . .	323
22.2. Economic experimentation . . . . .	330
22.3. Survey of the sensitivity tests carried out in sector programming . . . . .	332

### Chapter 23

IMPROVING ON THE PLAN OF THE NATIONAL ECONOMY . . . . .	337
23.1. Consistency analysis . . . . .	337
23.2. The redistribution of resources between two sectors . . . . .	338

*Chapter 24*

<b>THE MODEL OF "TWO-LEVEL PLANNING" (Co-author: TIL LIPTÁK)</b> . . . . .	345
24.1. The course of the discussion . . . . .	345
24.2. Imitation of the usual course of planning . . . . .	347
24.3. The central model . . . . .	348
24.4. The primal sector model . . . . .	350
24.5. The dual sector model . . . . .	355
24.6. The course of programming . . . . .	357
24.7. Detailed description of the algorithm . . . . .	360
24.8. Interpretation of the problem in terms of the theory of games . .	368
24.9. The treatment of investments in the model . . . . .	370

*Chapter 25*

<b>THE FUTURE OF MULTI-LEVEL PLANNING</b> . . . . .	373
25.1. Aspects of the model of two-level planning . . . . .	373
25.2. Computation-technical properties of the algorithm . . . . .	373
25.3. The "pyramidal" network of programming models . . . . .	376
25.4. Multi-level programming as a simulation of economic planning	381

*Chapter 26*

<b>THE SHADOW PRICES</b> . . . . .	385
26.1. The equalization of shadow prices . . . . .	385
26.2. The relative character of the optimality of shadow prices . . .	386
26.3. The use of shadow prices outside the model . . . . .	387
26.4. The rental on capital and the rate of interest . . . . .	389

*Chapter 27*

<b>THE OPTIMALITY CRITERION</b> . . . . .	393
27.1. Serving the aims of the economic policy . . . . .	393
27.2. "Weights" and "absolute target" . . . . .	398
27.3. The planning process and the model . . . . .	403
27.4. The "tightness" of targets of economic policy . . . . .	404
27.5. Checking the feasibility of the targets . . . . .	409
27.6. Efficient programs . . . . .	410
27.7. Are there revealed preferences on the part of higher economic administration? . . . . .	413
27.8. Economico-politically admissible programs . . . . .	417
27.9. The surplus creating role of the objective function . . . . .	422
27.10. Is programming really worth while? . . . . .	426

PART 6: POSTSCRIPT: RECENT EXPERIENCES  
IN MATHEMATICAL PLANNING

*Chapter 28*

<b>THE FIRST EXPERIMENTAL MULTI-LEVEL ECONOMY-WIDE PROGRAMMING . . . .</b>	<b>432</b>
28.1 Introduction . . . . .	432
28.2 Variables . . . . .	433
28.3 Economic contents of the constraints . . . . .	436
28.4 The objective functions . . . . .	439
28.5. The "levels" of the system of constraints . . . . .	440
28.6. Advantageous features of the multi-level structure . . . . .	443
28.7. A system of models . . . . .	447
28.8 On the results of the computations . . . . .	448
28.9 Shadow prices and incremental ratios . . . . .	454
28.10 Sensitivity of the marginal indicators as exemplified with the aid of the R/D indicator . . . . .	458
28.11 On the rental on capital . . . . .	460
28.12 The shadow prices in the aggregate programming model . . . .	462

*Chapter 29*

<b>MATHEMATICAL PROGRAMMING OF FIVE-YEAR PLANNING. A SURVEY OF THE YEARS 1969-1971 . . . . .</b>	<b>465</b>
29.1 Structure of the survey . . . . .	465
29.2 Sector models . . . . .	466
29.3 The programming model of five-year planning of physical, value and financial processes: The "large model" . . . . .	470
29.4 Computations performed with the large model . . . . .	478
29.5 Multi-period programming . . . . .	483
29.6 Plan macrofunctions . . . . .	488

*Chapter 30*

<b>ONCE AGAIN ON MULTI-LEVEL PLANNING . . . . .</b>	<b>501</b>
30.1 Clarification of concepts . . . . .	501
30.2 Utilization and interpretation possibilities of the decomposition procedures . . . . .	504
30.3 The notion of multi-level planning . . . . .	511
30.4. Computerization of the plan-instructions mechanism. . . . .	513
30.5. The economy regulated by shadow prices . . . . .	517
30.6 The place of the multi-level model system in the combined control of the economy . . . . .	519
30.7 "Computopia" or a modest extension of rationality? . . . . .	523

## APPENDICES

*Appendix A*

APPROXIMATION OF THE CONCAVE MINIMIZATION PROBLEM . . . . .	529
A.1. The problem outlined . . . . .	529
A.2. The method of "progress at random" . . . . .	530
A.3. The "curving" of the objective function . . . . .	531

*Appendix B*

FROM THE MATERIAL OF THE PROGRAMMING PROJECT FOR THE MAN-MADE FIBRES INDUSTRY . . . . .	534
B.1. Some examples of forecasting the trend of world-market prices	534
B.2. Correlation estimates . . . . .	538
B.3. Expected value and standard deviation of the stochastic cost function . . . . .	540

*Appendix C*

THE EFFECTS OF THE CONCENTRATION AND THE SCATTERING OF THE ACTIVITIES (by TH. LIPTÁK) . . . . .	544
--	-----

*Appendix D*

COMPOUND INTEREST FORMULAE . . . . .	547
D.1. The rental formula . . . . .	547
D.2. Investment cost with interest added . . . . .	547
D.3. Costs discounted . . . . .	549
D.4. The rate of interest used in compound interest formulae . . . . .	550

*Appendix E*

PROOFS OF THE PROPOSITIONS RELATING TO THE RENTAL ON CAPITAL (by P. WELLISCH) . . . . .	553
--	-----

*Appendix F*

THE STATISTICAL EXAMINATION OF MACROECONOMIC GROWTH PROCESSES (Co-author: P. WELLISCH) . . . . .	557
F.1. Aim of the examination . . . . .	557
F.2. The growth of national income, of the production fund and the labour force . . . . .	558
F.3. The more important production ratio figures . . . . .	562
F.4. The time series relating to the utilization of the national income	565
F.5. Regression analysis . . . . .	568
F.6. Estimation of the parameters of the production function . . . . .	574

*Appendix G*

A. SURVEY ON THE DISPUTE ON THE RENTAL ON CAPITAL . . . . .	578
G.1. Character of the survey . . . . .	578
G.2. The views connected with the production of national income . . .	579
G.3. The views connected with the distribution of national income	582
G.4. Distribution and optimality . . . . .	583
G.5. Other questions under debate . . . . .	585

*Appendix H*

THE GENERAL MODEL OF "TWO-LEVEL PLANNING": "TWO-LEVEL PROGRAMMING" (by TH. LIPTÁK) . . . . .	588
H.1. Introduction . . . . .	588
H.2. The overall central information problem . . . . .	589
H.3. Sector partitioning . . . . .	590
H.4. Evaluable central programs . . . . .	591
H.5. Generator sets . . . . .	592
H.6. The two-level problem . . . . .	594
H.7. Derived polyhedral game . . . . .	596
H.8. Regularity . . . . .	599
H.9. Fictitious play . . . . .	601
H.10. The termination of the iteration: $\delta$ -optimal solution . . . . .	603
H.11. The "equalization" of the shadow prices . . . . .	604
H.12. A general decomposition and embedding technique for solving an arbitrary solvable linear programming problem by the use of the method of two-level programming . . . . .	605

*Appendix I*

THE PLAN-IMPROVEMENT PROCEDURE . . . . .	608
--	-----

*Appendix J*

ON THE RELATION BETWEEN "CAPITAL-LABOUR" ANALYSIS PERFORMED IN THE FRAMEWORK OF ECONOMY-WIDE PROGRAMMING AND IN PRODUCTION THEORY	615
J.1. Similarities and dissimilarities . . . . .	615
J.2. Determination of production functions . . . . .	619
REFERENCES . . . . .	621
AUTHOR INDEX . . . . .	637
SUBJECT INDEX . . . . .	640
