CONTENTS

PREFA	ACE	VII
Conte	ENTS	IX
I.	INTRODUCTION	1
	1.1. Aspects of the problem	1
	1.2. Types of aggregation	3
	1.3. Approaches to the problem	4
	1.4. Survey of contents	7
II,	AGGREGATION OVER ONE SET OF INDIVIDUALS	10
	2.1. Assumptions	10
	2.2. The relations between macro and microparameters	
	(1)	12
	2.3. The relations between macro and microparameters	
	(2)	14
	2.4. Some special cases	17
	2.5. On the selective nature of linear aggregation	23
III.	AGGREGATION OVER SEVERAL SETS OF INDIVIDUALS OR	
	COMMODITIES	27
	3.1. The isomorphism of aggregation over commodities	
	and aggregation over individuals	27
	3.2. A generalisation	28
	3.3. Remarks and special cases	31
	3.4. Comments on the assumptions	34
IV.	Aggregation over time periods	39
	4.1. The case of equations containing no lagged	
	variables	39

	4.2. The case of equations containing lagged exogenous	
	variables	40
	4.3. Clarifications and special cases	45
	4.4. The case of equations containing lagged endogenous	
	variables	53
	4.5. Stock variables versus flow variables	56
V.	SYSTEMS OF SIMULTANEOUS MACROEQUATIONS	59
	5.1. An example	59
	5.2. The reduced-form approach	61
	5.3. The example of section 5.1 further considered	74
	5.4. Further remarks on corresponding and noncorre-	
	sponding parameters	78
	5.5. Remarks on overidentified macroequations	85
	5.6. Multiple aggregation	87
VI.	FURTHER EXTENSIONS	91
	6.1. Aggregation in a changing economy (1)	91
	6.2. Aggregation in a changing economy (2)	100
	6.3. The disturbances of macroequations	110
	6.4. The implications of different statistical methods of	
	6.4. The implications of different statistical methods of estimating macroequations	116
	 6.4. The implications of different statistical methods of estimating macroequations	116 126
VII.	 6.4. The implications of different statistical methods of estimating macroequations	116 126 133
VII.	 6.4. The implications of different statistical methods of estimating macroequations	116 126 133 133
VII.	 6.4. The implications of different statistical methods of estimating macroequations	116 126 133 133
VII.	 6.4. The implications of different statistical methods of estimating macroequations 6.5. Nonlinear equations; nonlinear aggregation 7.1. Summary of some of the results 7.2. The Rule of Perfection and its application to linear one-equation macromodels 	116 126 133 133
VII.	 6.4. The implications of different statistical methods of estimating macroequations 6.5. Nonlinear equations; nonlinear aggregation 7.1. Summary of some of the results 7.2. The Rule of Perfection and its application to linear one-equation macromodels 7.3. The Rule applied to nonlinear one-equation macro- 	116 126 133 133 133
VII.	 6.4. The implications of different statistical methods of estimating macroequations 6.5. Nonlinear equations; nonlinear aggregation 7.1. Summary of some of the results 7.2. The Rule of Perfection and its application to linear one-equation macromodels 7.3. The Rule applied to nonlinear one-equation macromodels 	116 126 133 133 139 146
VII.	 6.4. The implications of different statistical methods of estimating macroequations 6.5. Nonlinear equations; nonlinear aggregation 7.1. Summary of some of the results 7.2. The Rule of Perfection and its application to linear one-equation macromodels 7.3. The Rule applied to nonlinear one-equation macromodels 7.4. The Rule applied to linear models of several macro- 	116 126 133 133 139 146
VII.	 6.4. The implications of different statistical methods of estimating macroequations 6.5. Nonlinear equations; nonlinear aggregation 7.1. Summary of some of the results 7.2. The Rule of Perfection and its application to linear one-equation macromodels 7.3. The Rule applied to nonlinear one-equation macromodels 7.4. The Rule applied to linear models of several macroequations (1) 	116 126 133 133 133 139 146 152
VII.	 6.4. The implications of different statistical methods of estimating macroequations 6.5. Nonlinear equations; nonlinear aggregation 7.1. Summary of some of the results 7.2. The Rule of Perfection and its application to linear one-equation macromodels 7.3. The Rule applied to nonlinear one-equation macromodels 7.4. The Rule applied to linear models of several macroequations (1) 7.5. The Rule applied to linear models of several macro- 	116 126 133 133 139 146 152
VII.	 6.4. The implications of different statistical methods of estimating macroequations 6.5. Nonlinear equations; nonlinear aggregation 7.1. Summary of some of the results 7.2. The Rule of Perfection and its application to linear one-equation macromodels 7.3. The Rule applied to nonlinear one-equation macromodels 7.4. The Rule applied to linear models of several macroequations (1) 7.5. The Rule applied to linear models of several macroequations (2) 	116 126 133 133 139 146 152 159
VII.	 6.4. The implications of different statistical methods of estimating macroequations 6.5. Nonlinear equations; nonlinear aggregation 7.1. Summary of some of the results 7.2. The Rule of Perfection and its application to linear one-equation macromodels 7.3. The Rule applied to nonlinear one-equation macromodels 7.4. The Rule applied to linear models of several macroequations (1) 7.5. The Rule applied to linear models of several macroequations (2) 7.6. The Rule applied to linear macromodels describing 	116 126 133 133 139 146 152 159
VII.	 6.4. The implications of different statistical methods of estimating macroequations 6.5. Nonlinear equations; nonlinear aggregation 7.1. Summary of some of the results 7.2. The Rule of Perfection and its application to linear one-equation macromodels 7.3. The Rule applied to nonlinear one-equation macromodels 7.4. The Rule applied to linear models of several macroequations (1) 7.5. The Rule applied to linear models of several macroequations (2) 7.6. The Rule applied to linear macromodels describing a changing economy 	116 126 133 133 139 146 152 159 167
VII. VIII.	 6.4. The implications of different statistical methods of estimating macroequations 6.5. Nonlinear equations; nonlinear aggregation 7.1. Summary of some of the results 7.2. The Rule of Perfection and its application to linear one-equation macromodels 7.3. The Rule applied to nonlinear one-equation macromodels 7.4. The Rule applied to linear models of several macroequations (1) 7.5. The Rule applied to linear models of several macroequations (2) 7.6. The Rule applied to linear macromodels describing a changing economy CONCLUSION. 	116 126 133 133 139 146 152 159 167 171
VII. VIII.	 6.4. The implications of different statistical methods of estimating macroequations 6.5. Nonlinear equations; nonlinear aggregation 7.1. Summary of some of the results 7.2. The Rule of Perfection and its application to linear one-equation macromodels 7.3. The Rule applied to nonlinear one-equation macromodels 7.4. The Rule applied to linear models of several macroequations (1) 7.5. The Rule applied to linear models of several macroequations (2) 7.6. The Rule applied to linear macromodels describing a changing economy CONCLUSION. 8.1. Retrospect 	116 126 133 133 139 146 152 159 167 171 171
