<i>Introduction to the series</i>	v
<i>Preface</i>	vii
1 Introduction	1
1.1 Methodology	1
1.2 Evaluating the literature	2
1.3 Our approach	3
1.4 Some limitations	4
2 Taxes and the public sector	7
2.1 Introduction	7
2.2 The economy	7
2.3 Tax instruments	9
2.4 Tax incidence	10
2.5 Different views on incidence	13
2.6 Summary	14
3 Dalton's Law	17
3.1 Introduction	17
3.2 Dalton's Law	17
3.3 A simple general equilibrium model	21
3.4 The numeraire	24
3.5 Comparative statics	26
3.6 Summary	29
4 Household behaviour	31
4.1 Introduction	31
4.2 Micro-economic theory	32
4.3 The elasticity of substitution	37
4.4 Changing the origin	39

4.5	Reducing the number of unknowns	46
4.6	Aggregation over households	48
4.7	Summary	52
	Appendix: A nested-CES utility function	53
5	Firm behaviour	59
5.1	Introduction	59
5.2	Micro-economic theory	60
5.3	Perfect competition	63
5.4	Substitution and scale effects	69
5.5	Reducing the number of unknowns	70
5.6	Aggregation over firms	72
5.7	The inverse supply function	76
5.8	Summary	78
	Appendix: A nested-CES production function	79
6	The basic general equilibrium model	85
6.1	Introduction	85
6.2	The model	86
6.3	Comparative statics	88
6.4	Price burden and tax shifting	90
6.5	The three-good economy	93
6.5.1	The general case	93
6.5.2	A more specific case	97
6.6	Summary	101
7	The excess burden in a general equilibrium model	103
7.1	Introduction	103
7.2	The transfer model	104
7.3	Comparative statics	105
7.4	Individual burden and compensating variation	109
7.5	The aggregate burden	114
7.5.1	Efficiency and equity	114
7.5.2	The excess burden	117
7.6	The three-good economy	120
7.6.1	The model	120
7.6.2	Fixed labour supply	122
7.6.3	Price effects	125
7.6.4	Income effects	126
7.7	Summary	129

8	Public consumption	131
8.1	Introduction	131
8.2	The private households, the public household, and the fisc	131
8.3	The provision of public goods	133
8.4	The benefits of public goods	139
8.5	Balanced-budget and differential incidence	143
8.6	Summary	147
9	Disaggregating the household sector	149
9.1	Introduction	149
9.2	The general equilibrium model	150
9.3	Comparative statics	152
9.3.1	The aggregate household sector	152
9.3.2	The solution	156
9.4	The two-household, three-good model	160
9.4.1	The model	160
9.4.2	The effects of transaction taxes	164
9.4.3	The effects of lump-sum redistribution	167
9.5	Summary	170
10	The final general equilibrium model	173
10.1	Introduction	173
10.2	The general equilibrium model with discriminatory taxes	174
10.3	Comparative statics: households	179
10.4	Comparative statics: firms	182
10.5	Another look at the aggregate firm sector	187
10.6	Comparative statics: the final solution	192
10.7	An example: The Harberger model	197
10.7.1	Introduction	197
10.7.2	The household sector	199
10.7.3	The firm sectors	200
10.7.4	The aggregate firm sector	201
10.7.5	The effects of taxes with fixed output levels	205
10.7.6	The general equilibrium effects	207
10.8	Summary	211
	Appendix: The solution in the general case	213
11	Towards an operational model	215
11.1	Introduction	215
11.2	The foreign sector	215

11.2.1	Introduction	215
11.2.2	The foreign household	216
11.2.3	The "small-open-country" assumption	219
11.2.4	The magnitudes of the parameters	223
11.2.5	Summary	226
11.3	Savings and investment	227
11.3.1	Introduction	227
11.3.2	Intertemporal household and firm behaviour	227
11.3.3	Static and dynamic equilibria	232
11.3.4	Summary	234
11.4	Mobility, malleability and substitutability	235
11.4.1	Labour mobility	235
11.4.2	Capital mobility	238
11.4.3	Summary	240
11.5	Various tax functions	241
11.5.1	Introduction	241
11.5.2	Proportional taxes	241
11.5.3	Non-proportional taxes	244
11.5.4	The "multi-fisc" model	248
11.5.5	Summary	255
11.6	Imperfect competition and decreasing returns to scale	256
11.6.1	Introduction	256
11.6.2	Oligopoly	256
11.6.3	Decreasing returns to scale	259
11.6.4	Summary	262
11.7	Walrasian or Keynesian?	262
11.7.1	Introduction	262
11.7.2	Short and long run	263
11.7.3	Price rigidities and rationing	264
11.7.4	Price rigidities in a simple Walrasian model	266
11.7.5	Incorporating unemployment into general equilibrium models	270
11.7.6	Summary	274
12	A multi-sector model for the Netherlands	277
12.1	Introduction	277
12.2	Basic definitions and assumptions	278
12.3	The comparative-static solution	283
12.4	A multi-sector model for the Netherlands	289
12.4.1	Introduction	289

12.4.2	An overview	290
12.4.3	Information describing the initial situation	294
12.4.4	Information describing marginal behaviour of agents	300
12.4.5	Information describing the marginal characteristics of the tax system	308
12.5	The results	311
12.5.1	Introduction	311
12.5.2	General effects of taxes	317
12.5.3	The effects of the corporate income tax	324
12.5.4	Final remarks	327
12.6	Summary	331
Appendix: Price elasticities		334
