Introduction to the Series	v
Foreword by Richard E. Quandt	vii
Preface	ix
1. The Scope and Objectives of Urban Travel Demand Analysis	1
1.1 Introduction	1
1.2 Travel demand	2
1.3 The objectives of urban travel demand analysis	2
1.4 The behavioral approach	4
1.5 Policy sensitive models	5
1.6 Transportation system attributes and travel demand decisions	6
1.7 Diversity of modes in the modal choice decision	7
1.8 Time of day of travel	7
1.9 Trip destination	8
1.10 Trip frequency	8
1.11 Location and mode availability	9
1.12 Attitudinal versus behavioral models	10
1.13 Aggregated data versus individual observations	11
1.14 Equilibration	13
1.15 The plan of the book	14
2. A Survey of Urban Travel Demand Models	17
2.1 Introduction	17
2.2 Conventional urban transportation planning models	17
2.3 A critique of conventional models	21
2.4 Probabilistic models	22
2.5 Probabilistic choice of mode studies	25
2.6 Direct demand models	27
2.7 Attitudinal studies	30

3.	A Theory of Individual Travel Demand	33
3.1	Introduction	33
3.2	Rational choice behavior	34
3.3	Substitutes, complements, and independence	36
3.4	Factoring the demand model	38
3.5	Summary	45
4.	A Theory of Population Travel Demand Behavior	47
4.1	Introduction	47
4.2	Trip tables and choice probabilities	47
4.3	Determination of population choice probabilities	48
4.4	Probability functions for binary choice	53
4.5	Probability functions for multiple choice	65
4.6	The multinomial logit model	68
4.7	Independence of irrelevant alternatives and demand for a new transportation mode	69
4.8	Applications of behavioral travel demand models	80
4.9	Marginal and conditional trip tables	87
4.10	Population travel demand and cost-benefit analysis	94
5.	Statistical Estimation of Choice Probability Functions	101
5.1	Introduction	101
5.2	Estimation of the binary-choice model	101
5.3	The linear probability model	102
5.4	Estimation of nonlinear response functions	108
5.5	A Monte Carlo comparison of nonlinear estimators	112
5.6	Estimation of the multiple-choice model	117
5.7	Multinomial logit analysis	120
5.8	Measures of goodness of fit	122
6.	Data, Sample, and Variables	127
6.1	Introduction	127
6.2	Selection of metropolitan area	129
6.3	Review and evaluation of the Pittsburgh data	131
6.4	The home interview survey	132
6.5	Network data	134
6.6	Selecting the areas to be sampled	139
6.7	Variables for analysis of individual trips	142
6.8	Auto and transit line-haul times for work trips	142

6.9	Auto and transit line-haul times for shopping trips	144
6.10	Park and unpark times	146
6.11	Walking times—auto and transit	147
6.12	Transit wait and transfer times	149
6.13	Travel costs—auto and transit	150
6.14	Socioeconomic variables	152
7.	Estimation Results and Conclusions	155
7.1	Introduction	155
7.2	Work modal choice	158
7.3	Shopping choice of mode	165
7.4	Shopping choice of time of day of travel	167
7.5	Shopping choice of destination	170
7.6	Shopping trip frequency	173
7.7	Summary and implications	177
Appendix:	Sample Frequencies of Unlinked Trips by Purpose, Mode, and Household Characteristics	185
