<i>Introduction to the series</i>	v
<i>Preface</i>	vii
<i>List of tables</i>	xv
<i>List of illustrations</i>	xix
<i>Chapter 1. Introduction</i>	1
<i>Chapter 2. Decision theory and appropriate models of choice under uncertainty for peasant farmers</i>	13
2.1 Risk, uncertainty, and probability	13
2.2 Expected utility maximization	19
2.2.1 Mean-variance analysis: A special case	22
2.2.2 Expected utility maximization vs. bounded rationality: The question of decision costs	24
2.2.3 On the existence of utility functions in one-period money	27
2.2.4 Some problems with estimating utility functions	28
2.3 Shackle's focus loss—a behavioralist alternative	32
2.4 Safety-first rules-of-thumb	37
2.5 Multiple goal models	41
<i>Chapter 3. Choice of technique by Lexicographic Safety First and reswitching of risky techniques</i>	48
3.1 A model of choice of technique in the short-run	49
3.2 Choice of technique under uncertainty	51
	xi

3.3	Models of rice production decisions in the Philippines	52
3.4	An example	53
3.5	LSF solutions: Regions of optimality	57
3.6	Exogenous specification of $\bar{\alpha}$ and \bar{d}	57
3.7	Irrigated rice farms	61
3.8	Reswitching of optimal techniques	63
3.9	Risk premium and certainty equivalence	66
3.10	Summary and conclusions	68
 <i>Chapter 4. Optimal contractual choice, sharecropping under heterogeneous land, and the inverse relationship</i>		 69
4.1	Towards a theory of contractual choice in agriculture	69
4.1.1	The determinants of contractual choice	74
4.1.2	The nature of the sharecropping contracts in the Philippines	76
4.2	Optimal farm size under share tenancy with heterogeneous land	79
4.3	The inverse relationship between farm size and yield per hectare	85
4.4	Philippine evidence	87
4.4.1	The Laguna data	87
4.4.2	The inverse relationship on yields	88
4.4.3	Land quality, farm size, and yields	88
4.4.4	Tenancy and productivity	91
4.4.5	Inputs and farm size	91
4.4.6	Land quality and the incidence of share tenancy	92
4.5	Alternative explanations of the relationship between land quality and farm size and some comparative notes from the Indian experience	94
4.6	Factors that may complicate the relationship between farm size and land quality	96
4.7	Other factors influencing the efficiency of different tenancy contracts and implications for land reform	96
Appendix		98

Chapter 5. Measuring the risk of investing in nitrogen fertilizer **101**

5.1	The "naive method"	102
5.2	An econometric approach	103
5.3	Estimating risk from experimental data	105
5.3.1	Deviation from normality	111
5.3.2	Relationship of sample moments to nitrogen level	112
5.3.3	Explaining the shapes of the frequency distributions	112
5.4	Combining experimental production functions with farm data on crop damages	118
5.4.1	The no-damage production functions	119
5.4.2	Incorporating farm-level information on damages: The Biñan survey	121
5.4.3	The expected production function	130
5.4.4	Risk in Bicol and an alternative approach	136
5.5	The feasibility of estimating probabilistic production functions of insecticide	142
5.6	Conclusions	145
Appendix 5.1. An application of stochastic dominance theory for single-crossing frequency curves		147

Chapter 6. Optimum fertilizer rates under uncertainty and the role of risk in the demand for fertilizer **155**

6.1	Optimal nitrogen inputs under risk neutrality	156
6.2	The risk sensitivity index	161
6.3	Optimal fertilizer under LSF_1 and LSF_2	162
6.4	Two additional multiple goal models and their solutions	166
6.5	Does risk matter?	168
6.6	Is there a conflict between expected profit and safety?	172
6.7	Conclusions and generality of the results	177
Appendix 6.1. Isorisk curves		179

Appendix 6.2. Sensitivity of the results to use of the empirical distribution	182
Appendix 6.3. Sensitivity to new probability estimates: Interdependence among types of insect damage	195
Appendix 6.4. The computer program OPT/RICE (with NICHOLAS KNUEPPEL)	199
<i>Chapter 7. Summary, conclusions, and implications for agricultural policy</i>	211
7.1 Summary	211
7.2 Implications for devising recommended farm practices	219
7.3 Implications for research methodology in agricultural economics	221
7.4 Implications for agricultural policy	222
7.4.1 Crop insurance	222
7.4.2 Learning, dynamic uncertainty, and government intervention	223
7.4.3 Implications for land reform	226
7.5 Directions for further research	228
7.6 Does diversification imply risk aversion?	232
