

## CONTENTS

Introduction to the Series . . . . .	v
<i>Introduction</i> . . . . .	1
 <b><i>Part I: Decision-making in a planned economy</i></b>	
<b><i>Chapter 1. Decision-making systems and control systems</i></b>	
1.1. Classification criteria: the structure of preferences and the level of decision-making . . . . .	9
1.2. System 1: Central preferences — direct allocation of resources . . . . .	10
1.3. System 2: Central preferences — direct and indirect allocation of resources . . . . .	13
1.4. System 3: Consumers' preferences decisive for the final demand structure for consumer goods . . . . .	14
1.5. Mixed systems . . . . .	15
 <b><i>Chapter 2. Decision-making as a multi-stage and multi-phase process</i></b>	
2.1. Decision-making as a multi-stage process . . . . .	19
2.2. Decision-making as a multi-phase process . . . . .	25
 <b><i>Chapter 3. The selection and sequence of spheres of implementation of efficiency systems</i></b>	
3.1. The mathematical economist's approach . . . . .	29
3.2. The separate treatment of the short-run . . . . .	31
3.3. Factors influencing the selection of decision-making systems . . . . .	33
3.4. The logic of the sequence of implementation of efficiency systems . . . . .	36
 <b><i>Part II: Models</i></b>	
<b><i>Chapter 4. The stage of partial analysis of efficiency in foreign trade</i></b>	
4.1. General remarks . . . . .	41
4.2. Partial efficiency criteria . . . . .	41

4.2.1. Financial indicator . . . . .	42
4.2.2. Last-phase labour cost indicator . . . . .	42
4.2.3. Coefficients of material intensity . . . . .	44
4.3. Shortcomings of partial methods of efficiency analysis . . . . .	45
4.4. Applicability conditions. . . . .	46
<i>Chapter 5. The model of short-run optimization of geographical allocation of foreign trade</i>	
5.1. The initial setup . . . . .	49
5.2. The model of optimization of geographical allocation of foreign trade (assumptions, formulations, conclusions) . . . . .	54
5.3. Variants of determining the directional rates . . . . .	60
5.4. The search for computational optimization methods . . . . .	61
Appendix to chapter 5: Numerical illustration of the iterative method of determination of $K'$ . . . . .	64
<i>Chapter 6. The overall model of current optimization of foreign trade (of the volume, commodity structure and geographical allocation)</i>	
6.1. The general approach and the basic assumptions . . . . .	67
6.2. The model of current optimization of the volume and commodity structure in trade with one foreign market and no limitations among commodities . . . . .	71
6.3. The model of current optimization of the volume and commodity structure in trade with one foreign market. The first emergence of the profit criterion . . . . .	76
6.4. The general model of short-run optimization of the volume, commodity structure and geographical allocation of foreign trade . . . . .	81
6.5. The implications of the model analysis for the practical improvement of planning and management . . . . .	86
Appendix to chapter 6: The decomposition theorem . . . . .	88
Appendix to chapters 5 and 6: The method of determining activities . . . . .	94
<i>Chapter 7. The model of optimization of complementary investments</i>	
7.1. The mathematical formulation of the model . . . . .	101
7.2. The correct measure of the investment funds and of capital inputs . . . . .	105
7.3. Planning of complementary investments. . . . .	106
7.4. The simplest cases . . . . .	108
7.5. The proper division of the total investment fund . . . . .	114
<i>Chapter 8. The financial system and efficiency in management</i>	
8.1. Introduction . . . . .	117
8.2. Shadow prices and retail prices . . . . .	119

8.3. The principles of the proposed financial system . . . . .	122
8.4. Variants of the financial system . . . . .	126
8.5. Remarks on taxes and subsidies . . . . .	128

### ***Part III: Practical applications in Poland***

#### *Chapter 9. The transition from models to practical applications*

9.1. General problems . . . . .	133
9.2. Problems of application. . . . .	136

#### *Chapter 10. Statistical determination of rates of structural and directional efficiency as initial rates of the optimization calculation for a foreign trade plan*

10.1. The statistical determination of $M^*$ and $K^*$ . . . . .	139
10.2. Statistical analysis of export rates . . . . .	141
10.3. Statistical determination of the rates for imports . . . . .	144
10.4. The graphic method for determining optimal rates including the planned balance $S^*$ . . . . .	150
10.5. Methods of determining the marginal rate of interest on complementary investments connected with foreign trade . . . . .	155

#### *Chapter 11. Efficiency in planning*

11.1. The general guidelines of the "Kalecki Commission" . . . . .	157
11.2. The profit maximization criterion in decentralized planning . . . . .	160
11.3. The efficiency indicator $E_k^*$ and its application . . . . .	162
11.4. The allocation of funds for investments connected with foreign trade . . . . .	165

#### *Chapter 12. Systems of indirect control in 1966–1970. Construction principles and application*

12.1. The calculative approach in export promotion as the first complex system of indirect control . . . . .	169
12.2. The <i>POLFA</i> experiment—the integration of the calculative system with the financial system . . . . .	172
12.3. Experiment with the <i>ZPO</i> ( <i>Shipbuilding Industry Association</i> ) as a model management system for branches specializing in exports. . . . .	175
12.4. The reform of prices . . . . .	178

#### *Chapter 13. The premises of socioeconomic policy after 1970 as a basis for system designs*

13.1. The premises of the proposed general system . . . . .	182
13.2. Problems in the strategy of systemic changes . . . . .	188

*Chapter 14. System constructions in foreign trade proposed for the period 1971–1980*

14.1. Designs of corrective instruments in an incentive-passive financial system . . . . .	199
14.2. The envisaged system of planning and organization in foreign trade	202
14.2.1. Problems in planning . . . . .	202
14.2.2. Organization problems . . . . .	209
14.3. Variants of choice of the foreign exchange conversion coefficient and of corrective and taxation systems . . . . .	213
14.4. Practical determination of the level of equilibrium foreign trade conversion coefficient . . . . .	232
14.5. Foreign trade conversion coefficients, prices and external inflation	235
14.6. Price parameters and the strategy of systemic changes. . . . .	237
14.6.1. Domestic prices and efficiency . . . . .	237
14.6.2. Parameters in foreign trade and domestic prices . . . . .	239
14.6.3. The prices and the integration of the financial results — the extent of applicability of the incentive-active rules . . . . .	241
14.7. Problems of internal consistency . . . . .	242

*Chapter 15. Directions for further studies*

Appendix to chapter 15: Value added as a criterion of allocation of resources and a basis for correcting the wage fund . . . . .	253
