

## Contents

INTRODUCTION TO THE SERIES	V
PREFACE	VII
NOTATION	XVII
INTRODUCTION	XIX
1. The role of the production function	XIX
2. Micro and macro production functions	XIX
3. The efficiency distribution of firms as a micro-macro link in production analysis	XXI
4. Aggregation of production functions and aggregation of heterogeneous capital	XXII
5. Ex ante/ex post or long run/short run	XXIII
6. Outline of the book	XXVI
Notes	XXVII
TECHNICAL NOTES	XXIX

### *Part I. Aggregation of micro production functions*

CHAPTER 1. AN INTRODUCTORY ANALYSIS	3
1. Introduction	3
2. The Solow-Fisher aggregation problem	3
3. A new view on the aggregation problem	7
4. The efficiency-distribution approach	10
Notes	13
CHAPTER 2. THE EXISTENCE AND INVARIANCE OF AN AGGREGATE PRODUCTION FUNCTION WITH CAPITAL AND LABOR AGGREGATES	15
1. Determination of industry employment and output	15
1.1. Micro production functions with interfirm heterogeneous capital	15

1.2. Micro equilibrium in the short run	16
1.3. Industry employment and output	17
2. The aggregate production function and its existence conditions	18
2.1. An aggregate production function with capital and labor aggregates	18
2.2. The existence conditions of an aggregate production function with capital and labor aggregates	20
2.3. Macro elasticity of substitution	23
2.4. Capital-generalized constant returns	24
2.5. The Pareto distribution and the aggregate Cobb–Douglas production function	25
3. The aggregate production function and its invariance conditions	27
3.1. The invariance conditions of an aggregate production function	27
3.2. Interfirm efficiency differences and the nature of macro differences of efficiency	32
4. Other related problems	33
4.1. Measurement of output and capital	33
4.2. The coexistence of more-than-one types of micro production functions	33
4.3. Approximate aggregation	34
5. Summary	37
Appendix A. Aggregation of fixed-proportions micro production functions	38
A.1. The aggregate production function associated with fixed-proportions micro production functions	38
A.2. Solutions	39
A.3. Examples	40
A.4. Macro elasticity of substitution	42
Appendix B. Aggregation in cases other than when the micro elasticity of substitution is less than unity	43
B.1. Aggregation in the case of micro Cobb–Douglas production functions	43
B.2. Aggregation in the case of micro production functions with $\sigma > 1$	44
B.3. Aggregation in other cases	44
Appendix C. A special case of nonconstant returns	45
Notes	46
CHAPTER 3. MICRO AND MACRO CONSTANT-ELASTICITY-OF-SUBSTITUTION PRODUCTION FUNCTIONS	53
1. Introduction	53
2. Industry production functions arising from micro CES production functions	53

3. An industry production function which has a constant elasticity of substitution	55
3.1. $0 < \sigma < 1$	55
3.2. $\sigma > 1$	61
3.3. $\sigma = 1$	62
4. Concluding remarks	62
Notes	63
CHAPTER 4. AGGREGATION OF MANY VARIABLES	65
1. Introduction	65
2. More-than-one variable inputs: labor and materials	65
3. More-than-one variable labor inputs	68
4. More-than-one fixed inputs	69
5. More-than-one outputs	71
Notes	71
CHAPTER 5. IMPERFECT COMPETITION, SUBAGGREGATION, AND VALUE-ADDED PRODUCTION FUNCTIONS	73
1. Imperfect competition and aggregation	73
1.1. Imperfect competition and the aggregate production function	73
1.2. Cartel quotas and the aggregate production function	75
1.3. Horizontal marginal-cost curves and demand shifts	76
2. Subaggregation and the efficiency distribution	76
2.1. Introduction	76
2.2. A special case of subaggregation	77
2.3. Subaggregation with a common functional form	78
2.4. Disaggregation before aggregation	81
3. Validity of the value-added production function	81
3.1. Introduction	81
3.2. Gross and value-added production functions	82
3.3. Validity of the value-added production function	83
3.4. Aggregate value-added production function	84
3.5. Fixed-proportions case	84
Notes	85
CHAPTER 6. HOURS OF WORK AND AN AGGREGATE PRODUCTION FUNCTION	89
1. Introduction	89
2. Hours of work in micro production functions	89
3. Cases of the uniform wage rate	90
3.1. Case (1)	90
3.2. Case (2)	92

4. Cases of the marginally variable wage rate	93
4.1. Case (1)	93
4.2. Case (2)	95
5. Variable-proportions production functions	97
6. Concluding remarks	98
Notes	98

*Part II. Efficiency distributions and the nature of aggregate production functions*

CHAPTER 7. GENERATION OF THE EFFICIENCY DISTRIBUTION OF FIRMS	103
1. Efficiency distributions	103
2. Choice of best-practice techniques	104
3. Generation of efficiency differences	110
4. Dynamics of the efficiency distribution	113
Notes	114
CHAPTER 8. INTERFIRM EFFICIENCY DIFFERENCES AND THE NATURE OF CROSS-SECTION PRODUCTION FUNCTIONS	117
1. Introduction	117
2. Efficiency differences among firms	117
3. Nonneutral efficiency differences in micro production functions	118
4. Cross-section production functions	121
5. Early discussions of the relation of micro and cross-section production functions	122
5.1. Douglas	122
5.2. Reder	123
5.3. Bronfenbrenner	123
5.4. Marschak and Andrews	123
6. Econometric specifications of interfirm efficiency differences	124
7. Basic nature of the cross-section production function in the econometric literature	126
Notes	127
CHAPTER 9. SHORT-RUN AND LONG-RUN AGGREGATE PRODUCTION FUNCTIONS	131
1. Introduction	131
2. Short-run aggregate production functions	132
3. Shifts of the short-run aggregate production function	133

4. From the short-run to the long-run aggregate production functions	134
5. Econometric problems of estimating long-run production functions	138
6. Measurement of technical change	139
7. Distinction of alternative production functions	140
Notes	141

CHAPTER 10. THE LONG-RUN AGGREGATE PRODUCTION FUNCTION OF THE UNITED STATES ECONOMY	143
1. Introduction	143
2. Estimating equations	144
3. Data and alternative estimates	144
4. Extraneous information	146
5. Time-series analysis	148
6. Short-run and long-run isoquants	152
7. Contributions of factor substitution and technical change to productivity increase	153
Notes	154

### *Part III. Empirical examinations of the efficiency distribution*

CHAPTER 11. THE EFFICIENCY DISTRIBUTION: THE CASE OF JAPAN'S COTTON SPINNING INDUSTRY, 1956-1959	159
1. Data	159
2. Historical background of the industry	159
3. The efficiency distribution, 1956-1959	162
4. Micro and macro production functions	165
5. Estimation of cross-section production functions	167
Notes	170

CHAPTER 12. THE EFFICIENCY DISTRIBUTION: THE CASE OF TWO NORWEGIAN MANUFACTURING INDUSTRIES, 1963	173
1. Introduction	173
2. Data	173
3. Efficiency distribution	174
3.1. General characteristics	174
3.2. Elasticity of substitution	177
3.3. Labor efficiency distribution	178
Notes	180

CHAPTER 13. THE LABOR EFFICIENCY DISTRIBUTION: THE CASE OF UNITED STATES MANUFACTURING, 1958 AND 1963	183
1. Introduction	183
2. Nature of data	184
3. Patterns of wage-share distributions	185
4. Intertemporal stability of wage-share distributions	188
5. Other characteristics of the distributions	189
6. Explanation of the wage-share distribution	192
Appendix. Interindustry variations in the average wage share	195
Notes	196
CHAPTER 14. EMPIRICAL ESTIMATION OF CAPACITY DENSITY FUNCTIONS OF THE BETA TYPE	197
1. Introduction	197
2. Beta-distributed capacity density functions	198
2.1. Capacity density functions of the Beta type	198
2.2. Transform of the Beta distribution	199
2.3. Estimation of the labor efficiency distribution when micro production functions have fixed coefficients	200
2.4. Estimation of the labor efficiency distribution when micro production functions are CES functions	201
3. Empirical applications	203
3.1. Japan's cotton spinning industry, 1956-1959	203
3.2. Selected United States manufacturing industries, 1963	204
3.3. Concluding remarks	205
Notes	206
<i>Part IV. Numerical exercises with aggregate production functions</i>	
CHAPTER 15. AGGREGATE PRODUCTION FUNCTIONS UNDER CONSTANTLY GROWING INVESTMENT AND TECHNOLOGY	209
1. Introduction	209
2. General model	210
3. The case of fixed proportions on the micro level	214
3.1. Aggregate production function	214
3.2. Macro elasticity of substitution	216
3.3. Numerical examples	216
3.4. Tenability of the fixed coefficient model	219
4. The case of variable proportions ( $\sigma < 1$ )	220

4.1. Aggregate production function	220
4.2. Macro elasticity of substitution	221
4.3. Numerical examples	222
4.4. Capacity density function	227
5. The case of variable proportions ( $\sigma > 1$ )	228
5.1. Aggregate production function	228
5.2. Macro elasticity of substitution	229
5.3. Numerical examples	229
6. Best-practice and average levels of productivity	231
6.1. Average labor productivity	232
6.2. Total factor productivity	234
7. Concluding remarks	236
Notes	236

CHAPTER 16. HOW GOOD ARE CES AND VES APPROXIMATIONS OF AGGREGATE PRODUCTION FUNCTIONS?	239
1. Introduction	239
2. CES approximation (I)	239
3. CES approximation (II)	241
4. VES approximation (I)	241
5. VES approximation (II)	243
Notes	246

CHAPTER 17. AGGREGATE PRODUCTION FUNCTIONS ASSOCIATED WITH CAPACITY DENSITY FUNCTIONS OF THE BETA TYPE	247
1. Capacity density functions of the Beta type	247
2. Micro production functions with fixed proportions	248
3. Explicit solutions when $\lambda$ and $\mu$ are integers	249
4. Macro elasticity of substitution	251
5. Numerical exercise	252
6. Empirical plausibility	254
6.1. Case (1): $\lambda = 1, \mu = 30$	254
6.2. Case (2): $\lambda = 2, \mu = 10$	255
Notes	256

## Part V. Economy-wide aggregation

CHAPTER 18. LOCAL AGGREGATION OF INDUSTRY PRODUCTION FUNCTIONS	259
1. Setting of the problem	259
2. Intraindustry relations	261
