

Contents

1 Preliminaries	5
1.1 General Definition of Causal Fermion Systems	5
1.1.1 The General Framework of Causal Fermion Systems	5
1.1.2 The Spin Space and the Euclidean Sign Operator	9
1.2 Gauss-Bonnet Theorem	12
1.2.1 Euler characteristic in geometry and topology	14
Topological Invariants	14
The Euler characteristic	14
2 Construction of Lorentzian Quantum Geometry of Spin Dimension One	19
2.1 Clifford Extensions and The Tangent Space	19
2.2 Spin Connection	25
2.3 The Induced Metric Connection	28
2.4 Three Dimensional Clifford Extension	29
3 Riemannian Clifford Subspace and Its Spin Connection	31
4 The Dirac Sphere and Its Curvature	37
4.1 The Dirac Sphere	37
4.2 Synchronization Map and The Notion of Circumference	42
4.3 Splice Map and The Notion of Gauss curvature	45
5 A Gauss-Bonnet Theorem for Causal Fermion Systems	49
6 Summary and Outlook	59
