

TABLE OF CONTENTS

INTRODUCTION TO THE SERIES	V
PREFACE	VI
ABBREVIATED CONTENTS	VIII
TABLE OF CONTENTS.	IX
LIST OF TABLES	XIV
LIST OF FIGURES.	XVIII
 OUTLINE OF THE BOOK	 XIX
 CHAPTER 1. THE INFORMATION CONCEPT	
1. The Dog and the Chess-board	1
2. The Information Content of a Definite Message	3
3. An Axiomatic Approach to the Information Concept	5
4. The Information Gain of Weather Forecasts; A Generalization of the Information Concept	8
5. The Information Gain of Survey Forecasts; The Relative Gain.	10
6. The Information Gain of Survey Forecasts, Given Last Period's Pre- diction and Realization Experience.	14
7. The Sampling Variability of the Information Value	18
8. Historical Notes	19
Appendix	
 CHAPTER 2. EXPECTED INFORMATION	
1. The Expected Information in a Determinative Message; The Entropy Concept	24
2. The Expected Information of an Indirect Message	27
3. The Information Content of Survey Forecasts	29
4. Bivariate Information Theory	33
5. The Information Inaccuracy of Decomposition Forecasts	35
6. The Information Inaccuracy of Input Structure Predictions and the Information Improvement of Forecast Revisions.	39
7. The Aggregation Theory of the Information Inaccuracy.	43
8. Summary of Concepts	46

CHAPTER 3. ECONOMIC RELATIONS INVOLVING CONDITIONAL PROBABILITIES

1. Conditional Distributions and Their Entropies	49
2. The Determinants of Production Plan Revisions	52
3. Multivariate Information Theory	55
4. A Log-linear Model for Conditional Odds; The Logit	59
5. Statistical Estimation of the Log-linear Model	65
6. A Partial Log-linear Model	69
7. Logit Regressions.	71
8. Simulation of Logit Regressions	76
Appendix	

CHAPTER 4. THE MEASUREMENT OF INCOME INEQUALITY

1. Inequality at the Individual Level; The Aggregation Problem	91
2. Some Simple Continuous Income Distributions; White and Nonwhite Families in the United States	96
3. Two-level Aggregation: States and Sets of States in the United States	101
4. Income Inequality among Countries: 1949, 1957, 1976	107
5. Inequality Changes in the Case of Unchanged Population Shares	110
6. Migration and Its Effect on Per Capita Income; Maxwell's Demon on Ellis Island.	114
Appendix	
A. Notes on Some Alternative Measures of Income Inequality.	121
B. Details on White and Nonwhite Family Incomes.	128
C. Limits on Inequality when Income Brackets are Used	128

CHAPTER 5. A STATISTICAL APPROACH TO THE PROBLEM OF PRICE AND QUANTITY COMPARISONS

1. Random Selection of Commodities.	135
2. Coal Miners in the European Economic Community; The Factor Reversal Test and the Allocation Discrepancy	138
3. One-dimensional Price and Quantity Scales	146
4. Variation over Time: Consumption in the Netherlands, 1921-1963	150
5. Variances and Covariances of Logarithmic Price and Quantity Differences	154
6. Partial Index Numbers and the Decomposition of Price and Quantity Variances and Covariances	158
7. The Decomposition of the Dispersion of Value Share Changes: An Informational Approach	163

8. Concluding Remarks 166

Appendix

A. Details on the Cross-section Data 169

B. Details on the Time Series Data 172

C. The Decomposition of the Variance of Value Share Changes 180

CHAPTER 6. THE CONSUMER'S ALLOCATION PROBLEM

1. The Consumer's Optimality Conditions and the General Form of Demand Equations 182

2. The Fundamental Matrix Equation of Consumer Demand Theory 188

3. The Income Effect and the Substitution Effects of Price Changes 191

4. Demand Equations in Infinitesimal Changes; Preference Independence and Block-Independence 194

5. Demand Equations in Finite Changes; Real Income and Two Kinds of Relative Prices 200

6. The Marginal Utility of Income as a Function of Income and Prices 206

7. The Indirect Utility Function, Its Income Solution, and the True Cost of Living Price Index 208

8. A Comparison of Cost of Living and Marginal Price Index Numbers 212

9. Monotonic Transformations of the Utility Function 219

Appendix

A. Proof of the Lemma on Local Quadratic Approximation 222

B. The True Index of Real Income 223

CHAPTER 7. EMPIRICAL IMPLICATIONS OF THE ALLOCATION MODEL OF THE CONSUMER

1. A Reformulation of the Demand Equations; A Marginal Utility Shock Model 227

2. Aggregation and Disaggregation of Demand Equations; Partitioning of Demand Analysis 233

3. A Numerical Illustration; The Information Value of Demand Equations 237

4. The Information Value of Demand Predictions; The Impact of the Random Variability of Coefficients and Disturbances 245

5. The Marginal Price Index and the Marginal Utility of Income; Standard Errors of Their Log-changes 251

6. The Covariance of Price and Quantity Log-changes; Statistical Testing of the Income Flexibility 253

7. Moments of Log-changes Based on Marginal Value Shares; The Luxury-Necessity Index 258

8. Equivalent Income Changes	263
9. The Coal Miner Families Revisited: Cost of Living Comparisons at Different Real Income Levels	268
Appendix	
A. Breese and Chead: The Principal Components of Consumer Prefer- ences	276
B. Sampling Variances and Covariances of Coefficient Estimates	280
C. Summary of the Main Symbols Used in Chapters 5, 6 and 7	282
 CHAPTER 8. INDUSTRIAL CONCENTRATION AND THE ALLOCATION PROBLEM OF THE FIRM	
1. The Measurement of Industrial Concentration	290
2. Concentration in Different Geographic Areas: New Car Registrations in the United States, 1959-1964	295
3. Further Details on the New Car Registrations	300
4. The Demand for Factors of Production: The Fundamental Matrix Equation of Production Theory.	302
5. Solving the Fundamental Matrix Equation in the Case of Constant Returns to Scale; The Substitution Flexibility	306
6. The Special C.E.S. Case; The Problem of the Specification of the Factor Demand Equations	311
Appendix	
 CHAPTER 9. INPUT-OUTPUT ANALYSIS AND ITS AGGREGATION PROBLEMS	
1. The Input-Output Technique: A Brief Summary	319
2. The Aggregation Bias of Intermediate Demand Predictions.	322
3. The Aggregation Bias of Primary Demand Predictions	328
4. The Information Content of an Input-Output Table	331
5. The Information Decomposition Equation of Input-Output Aggre- gation	335
6. An Application to the Dutch Input-Output Tables, 1949-1960.	341
7. Partial Disaggregation of the Food Industry Set	345
8. Input-Output Prediction Before and After Disaggregation; A Mini- max Interpretation of the Input Heterogeneity Criterion.	348
Appendix	
 CHAPTER 10. INFORMATION MEASURES IN THE ANALYSIS OF INTERNATIONAL TRADE	
1. Predicting Trade Flows from Total Exports and Total Imports	357

2. An Application to the Trade of Eight Regions 360

3. Concentration with Respect to Origin, Destination and Composition for
Separate Countries and Commodity Groups 365

4. Aggregative Measures of Concentration 372

5. Two Country Sets: The Common Market and the Rest 377

Appendix

A. The RAS Method for Adjusting Bivariate Frequency Tables 388

B. Some Details on the Import-Export Data of Eight Countries 389

CHAPTER 11. CONTINUOUS INFORMATION THEORY AND A MULTIPLICATIVE
DECOMPOSITION OF PREDICTION ERROR VARIANCES

1. The Entropy of a Continuous Distribution; The Case of the Normal
Distribution 390

2. Predicting the Future and Estimating the Past 392

3. The Distribution of the Prediction and Estimation Errors; A Multi-
plicative Decomposition of Error Variances 397

4. The Adjustment of the Parameters of the Error Variances; Tests for
Normality 399

5. The Information Gain of the Next Stage 406

6. A Mean-square-error Evaluation of Individual Variables and Years. . . 409

7. An Informational Appraisal of Stage 1. 413

Appendix

BIBLIOGRAPHY 423

TABLES

A. Logarithms to the Base 2 and Natural Logarithms of Integers from 1
to 10,000 429

B. Logarithms to the Base 2 and Natural Logarithms of Reciprocals of
Probabilities 448

C. Logits to the Base 2 and Natural Logits 458

D. Transformation of Relative Changes to Log-changes and Vice Versa . . 463

INDEX 483
