

TABLE OF CONTENTS

I. THEORETICAL MODELS

Types of Asymptotic Approximations for Normal Probability Integrals	1
--	---

K. Breitung

Strong Convexity and Directional Derivatives of Marginal Values in Two-Stage Stochastic Programming	8
--	---

D. Dentecheva, W. Römisch and R. Schultz

Computation of Probability Functions and its Derivatives by means of Orthogonal Function Series Expansions	22
---	----

K. Marti

II. NUMERICAL METHODS AND COMPUTER SUPPORT

Computer Support for Modeling in Stochastic Linear Programming	54
---	----

P. Kall and J. Mayer

Structural Design via Evolution Strategies	71
--	----

B. Kost

On the Regularized Decomposition Method for Stochastic Programming Problems	93
--	----

A. Ruszczyński

Multipoint Approximation Method for Structural Optimization Problems with Noisy Function Values	109
V.V. Toropov	
Sequential Convex Programming Methods	123
K. Schittkowski and C. Zillober	
 III. ENGINEERING APPLICATIONS	
Target Costing: The Data Problem	142
P. Abel, S. Niemand and M. Wolbold	
Statistical Characterization of Granular Assemblies	177
K. Bagi and A. Vásárhelyi	
On Stochastic Aspects of a Metal Cutting Problem	196
J. Dupačová, P. Charamza and J. Mádl	
Consideration of Stochastic Effects for Finding Optimal Layouts of Mechanical Structures	210
H.A. Eschenauer and T. Vietor	
Tolerance Dynamics for a High Precision Balance	230
E. Franz and F. Pfeiffer	
On Boundary-Initial Value Problem for Linear Hyperbolic Thermoelasticity Equations with Control of Temperature	253
J. Gawinecki and L. Kowalski	

Optimal Trajectory Planning for Robots under the Consideration of Stochastic Parameters and Disturbances - Computation of an Efficient Open-Loop Strategy	268
K. Marti and S. Qu	
Performance Characteristics of OC Methods with Applications in Topology Design	289
G.I.N. Rozvany and M. Zhou	
Stochastic Optimization Models for Machining Operations	329
T. Szántai, I. Mészáros and J. Völgyi
