

Preface

Contents

§ 1	<u>Introduction</u>	1
§ 2	<u>Theoretical foundations of allocation policy</u>	3
1.	Benefit-cost analysis and consumer surplus	3
1.1	An empirically applicable welfare basis for public enterprise policy	3
1.2	Different kinds of consumer surplus reconsidered	11
2.	Partial versus general microeconomic analysis	19
3.	The quantitative importance of allocative efficiency	21
§ 3	<u>Marginal-cost pricing</u>	25
1.	Economic interpretation of marginal-cost pricing	26
2.	Joint production, quality differentiation and peak-load pricing	31
3.	Zerotariffs as a special concept for allocation	34
4.	Regulating marginal-cost prices	36
4.1	Theoretical background	36
4.2	The problem of cross-subsidization	39
4.3	Problems of practical application of marginal-cost prices	39
4.4	The British experiences	41
5.	Consequences for allocation, distribution and stabilization	44
§ 4	<u>Welfare maximization under a revenue-cost constraint</u>	47
1.	Nonlinear and nonuniform pricing	47
1.1	In search of an optimal price schedule	47
1.2	Nonuniform pricing	48
2.	Uniform pricing à la Ramsey	52

3.	On the opportunity costs of financing deficits	58
4.	Regulating Ramsey prices	60
4.1	Regulation by changing environment	61
4.2	Regulation by fixing relevant variables in a given environment	62
5.	Economic consequences of Ramsey prices and of two-part tariffs	67
5.1	Cross-subsidization	67
5.2	Influence on allocation, distribution and stabilization	69
§ 5	<u>Interdependencies with the private economy</u>	71
1.	Interdependencies caused by producers	71
1.1	A simple (graphical) example	73
1.2	Welfare maximizing public enterprise with profit constrained private enterprises	78
2.	Interdependencies caused by consumers	82
2.1	Congestion effects	83
2.2	Capacity limits of public peak traffic	84
2.3	Demand interdependencies and energy conservation	85
§ 6	<u>Non-allocational objectives</u>	87
1.	Description of different non-allocative objectives	89
1.1	Maximizing a distributionally weighted consumer surplus	89
1.2	Minimizing price indices	90
1.3	Sales (revenue) maximization	92
1.4	Output maximization	93
2.	The fundamental optimization problem	94
3.	Economic interpretation of the results	98
3.1	Optimization approaches of the allocative basic structure	98
3.2	Optimization approaches with distributional interference	98
4.	Some remarks on other non-allocational objectives	106

§ 7	<u>Public-good pricing</u>	107
1.	Optimal prices for public goods	108
2.	Some remarks on the applicability of public-good pricing	109
§ 8	<u>Conclusion: Welfare economics, business economics, and political economics</u>	113
1.	Business economics of public enterprises	113
1.1	Comparing efficiency of public and private production	113
1.2	Cost-axiomatic public pricing	115
2.	Political economics of public enterprises	118
2.1	Public versus private supply	118
2.2	The voting decision of a rational consumer	120
2.3	The politician's decision	121
Appendix	Obtaining the Ramsey price structure from maximization of consumer surplus	124
