

CONTENTS

Series Editor's Introduction	v
Acknowledgment	vii
1. Introduction and Overview	1
2. Latent Class Models	5
A. The General Model	5
B. Estimating Parameters	12
C. Assessing the Fit of Models to Data	14
D. A Note on Notation	24
3. Extreme-Types Models	25
A. Saturated Models	25
B. Cheating Data Example	30
C. Estimating the π^* Measure of Fit	34
D. Estimating Standard Errors	35
E. Classifying Respondents	38
F. Validation	39
G. Mixture-Binomial Model	40
4. Linear Scales	44
A. Introduction	44
B. Models with Response Errors	45
C. Clinical Scale Example	49
D. Extended Models	53
E. Lazarsfeld-Toby Data Example	55
F. Latent Distance Models	58
G. Latent Markov Models	62
H. Other Scaling Models	63
I. Repetitive Patterns	65
5. Joint Scales	66
A. Introduction	66
B. Biform and Multiform Scales	66
C. IEA Bus Data	68

6. Multiple Groups Analysis	71
A. Multiple-Group Extreme-Types Model	72
B. Multiple-Group Analysis of the Cheating Data	74
C. Significance Tests for Individual Parameters	77
D. Partial Homogeneity	78
E. Multiple-Group Scaling Models	78
F. Additional Considerations	80
7. Concomitant-Variable Models	81
A. The Concomitant-Variable Latent Class Model	81
B. Parameter Estimation	83
C. Cheating Data Example	84
D. Mixture-Binomial Concomitant-Variable Latent Class Model	87
Notes	89
