<b>Acknowledgments</b>	<b>VII</b>
<b>1 Introduction</b>	<b>1</b>
1.1 Motivation . . . . .	1
1.1.1 Counterparty Default Risk . . . . .	2
1.1.2 Derivatives on Defaultable Assets . . . . .	7
1.1.3 Credit Derivatives . . . . .	8
1.2 Objectives . . . . .	9
1.3 Structure . . . . .	11
<b>2 Contingent Claim Valuation</b>	<b>15</b>
2.1 Valuation in Discrete Time . . . . .	16
2.1.1 Definitions . . . . .	16
2.1.2 The Finite Setting . . . . .	18
2.1.3 Extensions . . . . .	22
2.2 Valuation in Continuous Time . . . . .	22
2.2.1 Definitions . . . . .	23
2.2.2 Arbitrage Pricing . . . . .	24
2.2.3 Fundamental Asset Pricing Theorem . . . . .	30
2.3 Applications in Continuous Time . . . . .	31
2.3.1 Black-Scholes Model . . . . .	31
2.3.2 Margrabe's Model . . . . .	36
2.3.3 Heath-Jarrow-Morton Framework . . . . .	39
2.3.4 Forward Measure . . . . .	45
2.4 Applications in Discrete Time . . . . .	48

2.4.1	Geometric Brownian Motion . . . . .	49
2.4.2	Heath-Jarrow-Morton Forward Rates . . . . .	50
2.5	Summary . . . . .	53
<b>3</b>	<b>Review of Credit Risk Models</b>	<b>55</b>
3.1	Pricing Credit-Risky Bonds . . . . .	56
3.1.1	Traditional Methods . . . . .	56
3.1.2	Firm Value Models . . . . .	57
3.1.2.1	Merton's Model . . . . .	57
3.1.2.2	Extensions and Applications of Merton's Model . . . . .	60
3.1.2.3	Bankruptcy Costs and Endogenous Default	61
3.1.3	First Passage Time Models . . . . .	63
3.1.4	Intensity Models . . . . .	69
3.1.4.1	Jarrow-Turnbull Model . . . . .	69
3.1.4.2	Jarrow-Lando-Turnbull Model . . . . .	75
3.1.4.3	Other Intensity Models . . . . .	78
3.2	Pricing Derivatives with Counterparty Risk . . . . .	79
3.2.1	Firm Value Models . . . . .	79
3.2.2	Intensity Models . . . . .	81
3.2.3	Swaps . . . . .	83
3.3	Pricing Credit Derivatives . . . . .	85
3.3.1	Debt Insurance . . . . .	85
3.3.2	Spread Derivatives . . . . .	86
3.4	Empirical Evidence . . . . .	88
3.5	Summary . . . . .	89
<b>4</b>	<b>Firm Value Model</b>	<b>91</b>
4.1	Credit Spreads . . . . .	92
4.2	The Credit Risk Model . . . . .	94
4.3	Deterministic Liabilities . . . . .	95
4.3.1	Prices for Vulnerable Options . . . . .	96
4.3.2	Special Cases . . . . .	99
4.3.2.1	Fixed recovery rate . . . . .	100
4.3.2.2	Deterministic Claims . . . . .	101
4.4	Stochastic Liabilities . . . . .	102

4.4.1	Prices of Vulnerable Options . . . . .	104
4.4.2	Special Cases . . . . .	106
4.4.2.1	Asset Claims . . . . .	107
4.4.2.2	Debt Claims . . . . .	107
4.5	Gaussian Interest Rates . . . . .	109
4.5.1	Forward Measure . . . . .	110
4.5.2	Prices of Vulnerable Stock Options . . . . .	112
4.5.3	Prices of Vulnerable Bond Options . . . . .	115
4.5.4	Special Cases . . . . .	115
4.6	Stochastic Liabilities . . . . .	116
4.6.1	Prices of Vulnerable Stock Options . . . . .	117
4.6.2	Prices of Vulnerable Bond Options . . . . .	119
4.6.3	Special Cases . . . . .	120
4.7	Vulnerable Forward Contracts . . . . .	120
4.8	Numerical Examples . . . . .	121
4.8.1	Deterministic Interest Rates . . . . .	121
4.8.2	Stochastic Interest Rates . . . . .	125
4.8.3	Forward Contracts . . . . .	134
4.9	Summary . . . . .	137
<b>5</b>	<b>Hybrid Model</b> . . . . .	<b>141</b>
5.1	The General Credit Risk Framework . . . . .	141
5.1.1	Independence and Constant Parameters . . . . .	144
5.1.2	Price Reduction and Bond Prices . . . . .	146
5.1.3	Model Specifications . . . . .	147
5.1.3.1	Arrival Rate of Default . . . . .	147
5.1.3.2	Recovery Rate . . . . .	148
5.1.3.3	Bankruptcy Costs . . . . .	149
5.2	Implementations . . . . .	151
5.2.1	Lattice with Deterministic Interest Rates . . . . .	151
5.2.2	The Bankruptcy Process . . . . .	157
5.2.3	An Extended Lattice Model . . . . .	160
5.2.3.1	Stochastic Interest Rates . . . . .	161
5.2.3.2	Recombining Lattice versus Binary Tree . . . . .	163
5.3	Prices of Vulnerable Options . . . . .	164
5.4	Recovering Observed Term Structures . . . . .	166

5.4.1	Recovering the Risk-Free Term Structure . . . . .	166
5.4.2	Recovering the Defaultable Term Structure . . . . .	166
5.5	Default-free Options on Risky Bonds . . . . .	168
5.5.1	Put-Call Parity . . . . .	169
5.6	Numerical Examples . . . . .	170
5.6.1	Deterministic Interest Rates . . . . .	170
5.6.2	Stochastic Interest Rates . . . . .	176
5.7	Computational Cost . . . . .	180
5.8	Summary . . . . .	182
<b>6</b>	<b>Credit Derivatives</b>	<b>185</b>
6.1	Credit Derivative Instruments . . . . .	186
6.1.1	Credit Forward Contracts . . . . .	187
6.1.2	Credit Options . . . . .	189
6.1.3	Other Credit Derivatives . . . . .	190
6.2	The Compound Pricing Approach . . . . .	191
6.2.1	Firm Value Model . . . . .	193
6.2.2	Stochastic Interest Rates . . . . .	195
6.2.3	Intensity and Hybrid Credit Risk Models . . . . .	196
6.3	Numerical Examples . . . . .	196
6.3.1	Deterministic Interest Rates . . . . .	197
6.3.2	Stochastic Interest Rates . . . . .	201
6.4	Summary . . . . .	203
<b>7</b>	<b>Conclusion</b>	<b>205</b>
7.1	Summary . . . . .	206
7.2	Practical Implications . . . . .	208
7.3	Future Research . . . . .	209
<b>A</b>	<b>Proofs</b>	<b>211</b>
A.1	Proof of Proposition 4.1 . . . . .	211
A.2	Proof of Proposition 4.4 . . . . .	217
A.3	Proof of Proposition 4.6 . . . . .	223
A.4	Proof of Proposition 4.8 . . . . .	231
A.5	Proof of Proposition 6.1 . . . . .	240

<b>B Stochastic Utilities</b>	<b>245</b>
B.1 Probabilistic Foundations . . . . .	245
B.2 Process Classes . . . . .	247
B.3 Martingales . . . . .	248
B.4 Brownian Motion . . . . .	250
B.5 Stochastic Integration . . . . .	252
B.6 Change of Measure . . . . .	257

# List of Figures

1.1	Outstanding OTC interest rate options . . . . .	4
1.2	Average cumulated default rates for U.S. investment-grade bonds . . . . .	6
1.3	Average cumulated default rates for U.S. speculative-grade bonds . . . . .	6
1.4	Classification of credit risk models . . . . .	12
3.1	Lattice with bankruptcy process . . . . .	71
4.1	Implied bond volatility . . . . .	127
4.2	Implied bond prices . . . . .	130
4.3	Implied term structures . . . . .	130
4.4	Implied yield spreads . . . . .	131
4.5	Price reductions for different maturities . . . . .	132
5.1	Bivariate Lattice . . . . .	153
5.2	Bankruptcy process with stochastic recovery rate . . . . .	158
5.3	Multidimensional lattice with bankruptcy process . . . . .	159
6.1	Implied credit-risky term structure . . . . .	198
6.2	Forward yield spread . . . . .	199
6.3	Absolute forward bond spread . . . . .	200
6.4	Implied risky term structures for different correlations . . . . .	202

# List of Tables

1.1	U.S. corporate bond yield spreads 1985-1995 . . . . .	2
1.2	Credit derivatives use by U.S. commercial banks . . . . .	8
3.1	First passage time models . . . . .	65
4.1	Price reductions for different $\rho_{SV}$ . . . . .	123
4.2	Price reductions for different $\rho_{VD}$ . . . . .	124
4.3	Price reductions for various correlations . . . . .	124
4.4	Price reductions for different $\rho_{VP}$ . . . . .	131
4.5	Price reductions for different $\rho_{VP}, \rho_{SV}, \rho_{SP}$ . . . . .	133
4.6	Deviations from forward bond price . . . . .	136
4.7	Deviations from forward stock price . . . . .	136
5.1	Price reductions for different correlations . . . . .	172
5.2	Price reductions for different correlations . . . . .	172
5.3	Price reductions for different correlations . . . . .	173
5.4	Price reductions with default cost . . . . .	175
5.5	Term structure data . . . . .	176
5.6	Prices of vulnerable bond options . . . . .	178
5.7	Implied default probabilities . . . . .	178
5.8	Prices of options on credit-risky bond . . . . .	179
5.9	Price reductions for various $\rho_{VP}$ under HJM . . . . .	182
6.1	Prices of credit spread options on yield spread . . . . .	197
6.2	Yield spread to bond spread conversion . . . . .	200

6.3	Prices of credit spread options on bond spread . . . . .	201
6.4	Prices of credit spread options with Vasicek interest rates	202
