

CONTENTS

Introduction	1
I. Organization and Regulation of The Electricity Supply Industry in Iran	
Abstract	
1. The Evolution of the Iranian ESI	1
1.1 Main Characteristics of Iran	1
1.2 History of Electricity in Iran	1
2. Organization of the Industry	2
2.1 Generation	4
2.1.1 Nominal and actual capacity of power plants	4
2.1.2 Power generation	5
2.1.3 Power required for consumption	6
2.1.4 Fuel consumption and efficiency	7
2.2 Transmission and distribution	9
2.2.1 Transmission lines	9
2.2.2 High voltage sub-stations	10
2.2.3 Sub-transmission lines	10
2.2.4 Distribution sub-stations	10
2.2.5 Network losses	11
2.3 Electricity consumption	11
2.4 Planning for network expansion	12
3. Regulation of the Industry	15
3.1 Regulatory systems in theory	16
3.2 Regulatory systems in practice	19
3.3 Regulation in the Iranian electricity-supply industry	22
3.3.1 Electricity tariffs	23
3.3.2 Investment decisions	26
4. Future Outlook	27
5. Summary and Conclusion	30
6. References	31
Tables	33
Figures	44
II. Total Factor Productivity Growth in The Iranian Electric Power Industry	
Abstract	
1. Introduction	1
2. The Econometric model	2
2.1 The translog cost function	2
2.2 Technical change and Economies of scale	5
2.3 Factor bias of technological change	6
2.4 Total factor productivity (TFP) growth	9
3. Estimation Procedure	10
4. Data Description	11
5. Empirical Results	12

5.1 Specification of technology	12
5.2 Input elasticities and economies of scale	13
5.3 Technical change and its components	16
5.4 Total factor productivity growth	16
5.5 Factor bias of technological change	17
6. Conclusions	18
7. References	19
Tables	21
Figures	28

III. Technical Efficiency and Its Time Pattern in The Iranian Electric Power Industry

Abstract	
1. Introduction	1
2. Efficiency Measures	3
3. Models Specification	4
3.1 Stochastic Frontiers	4
3.1.1 CSS Model	4
3.1.2 LS Model	7
3.2 Data Envelopment Analysis (DEA)	8
4. Data Description	13
5. Empirical Results	14
5.1 Specification Tests	14
5.2 Technical Efficiency Scores	15
6. Conclusion	19
7. References	20
Tables	23
Figures	29
Appendix	34

IV. Least Cost Expansion Planning Model for The Power System in Iran

Abstract	
1. Introduction	1
2. Model Structure	2
3. The Reference Energy System (RES) in Iran	7
3.1 Note on the load duration curve	8
4. Data and Assumptions	11
5. Optimal Capacity Expansion and Investment	15
6. Empirical Results	17
6.1 Unrestricted CO ₂ emissions (Reference Scenario)	17
6.2 Taxation of CO ₂ emissions (Second Scenario)	19
6.3 Taxation of CO ₂ emissions +15% discount rate (Third Scenario)	20
6.4 Taxation of CO ₂ emissions +Fuel cost increase (Fourth Scenario)	21
6.5 Restriction of CO ₂ emissions (Fifth Scenario)	23
6.6 No Integration Case	24
7. Remarks on The Dual Solution	24
8. Conclusion	25

9. References	27
