Abbreviations and Notations	xv
Preface	xvii
1 Multivariate Methods: An Overview	1
1.1 Introduction	1
1.2 One- and Two-Sample Problems	3
1.3 Detecting Change-Point	6
1.4 Data from More Than Two Populations: (MANOVA)	8
1.5 Classification, Discrimination, and Closeness	11
1.6 Multivariate Regression Analysis	12
1.7 Growth Curve Models	17
1.8 Principal Component Analysis	18
1.9 Appendix	19
2 Multivariate Normal Distributions	20
2.1 Introduction	20
2.2 Some Notation	20
2.3 Estimation of Mean and Covariance	24
2.4 Definition of Multivariate Normal	28
2.5 Properties of Multivariate Normal Distributions	29
2.6 Maximum Likelihood Estimates of μ and Σ	37
2.7 Some Results on Quadratic Forms	38
2.8 Appendix	41
2.8.1 Moment-generating Function	41
2.8.2 Jacobian of Transformations	42
2.8.3 Square Root of a Positive Definite Matrix	43
2.8.4 Matrix Differentiation	44
2.8.5 SAS Computational Procedures	45
2.9 Problems	50
3 Outliers Detection and Normality Check	57
3.1 Introduction	57
3.2 Detecting an Outlier in Multivariate Data	58
3.3 Assessing Normality of the Data	60
3.4 Assessing Univariate Normality	60

3.4.1	Kolmogorov's Test	61
3.4.2	Shapiro-Wilk Test	63
3.4.3	A Graphical Method	65
3.4.4	Transformations to Achieve Normality	65
3.5	Assessing Multivariate Normality	68
3.5.1	Small's Graphical Method	69
3.5.2	Srivastava's Graphical Method	70
3.5.3	A Test for Multivariate Normality	71
3.5.4	Test Based on Skewness and Kurtosis Statistic	73
3.5.5	Transformations to Achieve Normality	74
3.6	Examples	74
4	Inference on Location-Hotelling's T^2	89
4.1	Introduction	89
4.2	Univariate Testing Problems	89
4.2.1	One-Sample Student's t -Test	89
4.2.2	Two-Sample Student's t -Test	91
4.3	Multivariate One-Sample Testing	92
4.3.1	Multivariate One-Sample Problem	92
4.3.2	Confidence Regions	96
4.3.3	Fixed-Width Confidence Regions	101
4.3.4	Some Remarks	102
4.3.5	Roy's Union-Intersection Method	103
4.3.6	One-sided Tests	104
4.4	Multivariate Two-Sample Testing	109
4.4.1	Two-Sample Problem: Equal Covariance	109
4.4.2	One-Sided Tests with Equal Covariance	112
4.4.3	Paired T^2 -Test	114
4.4.4	One-Sided paired T^2 -Test	116
4.4.5	Behrens-Fisher Problem: Unequal Covariance	118
4.5	A Test for a Subvector	122
4.5.1	One-Sample Case	123
4.5.2	Two-Sample Case	125
4.6	Tests for Detecting a Change in Mean	129
4.6.1	An Estimate of the Change Point	130
4.6.2	Two More Tests for a Shift in the Mean	131
4.7	Tests for Linear Contrasts	133
4.7.1	Testing the Equality of Mean Components	134
4.7.2	One-Sided Tests for Equality of Means	138
4.8	Appendix	140
4.8.1	Analysis of Variance Model	140
4.8.2	Derivation of LRT for $\mu = \mu_0$	142
4.9	Problems	144

5	Repeated Measures	152
5.1	Introduction	152
5.2	Intraclass Correlation Model	152
5.3	Repeated Measures: One-Sample Case	154
5.3.1	Testing Equality of Means	154
5.3.2	ANOVA Table in Terms of Sufficient Statistic	155
5.3.3	Confidence Intervals	156
5.3.4	Examples	157
5.3.5	Justification for the Results in (5.3.2)	161
5.4	"Inter" and Intraclass Correlation Model	162
5.4.1	Model for Familial Data with Children Only	162
5.4.2	Model for the Familial Data with Mother	163
5.5	Hereditary Coefficient	165
5.5.1	Solution of Testing Problem in (i)	166
5.5.2	Solution of Testing Problem in (ii)	167
5.5.3	Solution for Testing Problem in (iii)	167
5.5.4	Equal Sample Size Case	168
5.6	Split-Plot and MANOVA Designs	169
5.7	Problems	171
6	Multivariate Analysis of Variance	178
6.1	Introduction	178
6.2	Completely Randomized Design	178
6.2.1	Derivation of the Likelihood Ratio Test	186
6.2.2	Some Other Possible Tests	186
6.3	Randomized Complete Block Design	187
6.4	Latin Square Design	194
6.5	Factorial Experiments	198
6.6	Analysis of Covariance	203
6.7	Appendix	208
6.8	Problems	211
7	Profile Analysis	219
7.1	Introduction	219
7.2	Profile Analysis of Two Groups	220
7.2.1	Tests for Similarity of Profiles	222
7.2.2	Tests of the Level Hypothesis	223
7.2.3	Test for the Condition Variation	225
7.3	General Case of J Groups	232
7.4	Problems	242
8	Classification and Discrimination	246
8.1	Introduction	246
8.2	Classifying into Two Known Normals	247
8.3	Classifying into Two Normals, Means Unknown	249
8.3.1	Estimates of e_1 and e_2	250
8.3.2	An Example	251

8.4	Classifying into Two Unknown Normals	252
8.4.1	Estimates of the Errors of Misclassification	253
8.4.2	An Example	254
8.5	Classifying into k Normals	255
8.6	The Canonical Variates Method	257
8.6.1	An Example	259
8.6.2	Proof of (8.6.3)	261
8.7	A Test for Reduction in Number of Variables	262
8.8	Stepwise Discriminant Analysis	263
8.9	Reduced Rank Discrimination	264
8.10	Classification with Covariates	264
8.11	Classifying into Two Normals with Unequal Covariance	265
8.12	Problems	265
9	Multivariate Regression	
9.1	Introduction	269
9.2	Multiple Linear Regression	269
9.3	Multivariate Linear Regression Model	277
9.3.1	Prediction, Residual, and Covariance Estimate	281
9.3.2	A Measure of Fit	281
9.4	Tests and Confidence Intervals	282
9.5	Comparing Regression Models	302
9.6	Testing Bilinear Hypotheses	305
9.7	Selection of Independent Variables	310
9.8	Prediction by Principal Component Method	312
9.8.1	Centering the Regression Model	313
9.8.2	Centering and Scaling the Regression Model	314
9.8.3	Scaled Version of the Regression Model	316
9.8.4	Principal Component Method	316
9.8.5	PC Method in Multivariate Regression Model	319
9.8.6	How to Choose Between the LSE and PC Method	322
9.9	Ridge Regression Estimators	327
9.9.1	Bayes Estimator of Regression Parameters	331
9.9.2	Empirical Bayes Estimator of c or λ	333
9.9.3	Ridge-Principal Component Estimators	334
9.9.4	Empirical Bayes Multivariate Ridge Estimator	336
9.10	Shrinkage or Stein Type of Estimators	337
9.11	Random Design Matrix	340
9.11.1	Least Squares Estimator for Random Design Matrix	340
9.11.2	Testing $\xi_0 = 0$	341
9.11.3	Testing $C\xi = 0$	342
9.12	Detecting Outliers and Assessing Normality	344
9.13	Appendix	347
9.13.1	Distributional Results for Matrix of Normals	347
9.13.2	Maximization of R_a^2 in Subsection 9.3.1	348
9.13.3	Variance Stabilizing Transformations.	348
9.13.4	Proof of $Z'y_{(0)} = Z'y$ in Section 9.8	349
9.13.5	Bias and Mean Square Error in PC Method	350

9.13.6	Effect on Estimates of ξ_j	352
9.13.7	Bias in Prediction	353
9.13.8	Mallow's C_q -Statistic	355
9.13.9	Akaike's Criterion	358
9.14	Problems	359
10	Growth Curve Models	365
10.1	Introduction	365
10.2	One-Sample GCM-Polynomial Regression	365
10.2.1	Test of the Adequacy of the Model	366
10.2.2	Estimates and Confidence Intervals for ψ	369
10.2.3	Test of the General Linear Hypotheses	369
10.3	Generalized MANOVA-GCM Model	373
10.3.1	Test for the Adequacy of the Model	375
10.3.2	MLE of the Parameters ψ and Σ	376
10.3.3	LRT for Testing a Submatrix of ψ to Be Zero	376
10.3.4	LRT for Testing $\psi = 0$	377
10.3.5	LRT for General Hypotheses	378
10.3.6	Simultaneous Confidence Intervals	378
10.4	Testing for an Outlier in Growth Curve Models	389
10.5	Problems	392
11	Principal Component Analysis	397
11.1	Introduction	397
11.2	PC Analysis Based on the Covariance Matrix	397
11.3	PC Analysis Based on the Sample Covariance	402
11.3.1	LRT for the Equality of the Last $p - k$ Eigenvalues of Σ	408
11.3.2	Some Asymptotic Distributions	408
11.3.3	Effect of Units of Measurement	409
11.4	Uses of Principal Components	410
11.5	PC Based on Sample Correlation Matrix	413
11.6	Problems	421
12	Factor Analysis	428
12.1	Introduction	428
12.2	Model	430
12.3	Communality, Variance of a Factor, and Total Variance	435
12.4	Comparison with Principal Components	436
12.5	Estimation of Parameters	438
12.5.1	Maximum Likelihood Estimates	438
12.5.2	Principal Factor Analysis	439
12.6	Choosing the Number of Factors	441
12.7	Problem of Negative Estimates of the Variances (Ψ_i)	443
12.8	Selection of Loadings and Factors	445
12.8.1	Factor Rotation	445
12.8.2	Varimax Rotation	446

12.8.3	Quartimax Rotation	452
12.8.4	Oblimin Rotations	453
12.9	Factor Scores	454
12.10	Examples	454
12.11	Appendix	468
12.11.1	Verification of (12.1.1)	468
12.11.2	Derivative of the Maximum Likelihood Solution	468
12.11.3	An Iterative Solution without Normality Assumption	470
12.12	Problems	471
13	Inference on Covariance Matrices	479
13.1	Introduction	479
13.2	A Test for $\Sigma = \Sigma_0$	479
13.2.1	Statement of the Problem	480
13.2.2	LRT and Its Asymptotic Distribution	480
13.2.3	A Test for $\Sigma = I$	481
13.2.4	Derivation of the LRT	481
13.3	A Test for Sphericity	481
13.3.1	Statement of the Problem	481
13.3.2	LRT and Its Asymptotic Distribution	482
13.3.3	Derivation of LRT	482
13.3.4	Some Comments	482
13.4	A Test for an Intraclass Correlation Model	483
13.4.1	Statement of the Problem	484
13.4.2	LRT and Its Asymptotic Distribution	484
13.4.3	Derivation of LRT	485
13.5	A Test for Equicorrelation	486
13.5.1	Statement of the Problem	487
13.5.2	A Test	487
13.6	A Test for Zero Correlation	489
13.6.1	Statement of the Problem	489
13.6.2	LRT and Its Asymptotic Distribution	489
13.7	A Test for Equality of Covariances	489
13.7.1	Statement of the Problem	489
13.7.2	LRT and Its Asymptotic Distribution	490
13.8	A Test for Independence	492
13.9	Testing for $\Sigma = I$ and $\mu = 0$	494
13.9.1	Statement of the Problem	494
13.9.2	LRT and Its Asymptotic Distribution	494
13.10	A Test for $\Sigma = \sigma^2 I$ and $\mu = 0$	494
13.10.1	Statement of the Problem	494
13.10.2	LRT and Its Asymptotic Distribution	495
13.11	Equality of Mean Vectors and Covariances	495
13.12	Problems	497

14 Correlations	501
14.1 Introduction	501
14.2 Correlation Between Two Random Variables	502
14.2.1 Estimating ρ When $\sigma_{11} = \sigma_{22} = \sigma^2$	504
14.2.2 Estimating ρ When $\sigma_{11} = \sigma_{22} = 1$ and $\rho > 0$ (or < 0)	504
14.3 Estimating ρ in the Intraclass Correlation Model	505
14.4 Matrix of Sample Correlations	506
14.5 Partial Correlations	507
14.6 Multiple Correlation	509
14.7 Canonical Correlations	512
14.7.1 Sample Canonical Correlation	515
14.7.2 Some Tests	516
14.7.3 Likelihood Ratio Test for Independence	517
14.7.4 An Example	518
14.8 Problems	520
15 Missing Observations: General Case	528
15.1 Introduction	528
15.2 MLE: Bivariate Case	528
15.2.1 Iterative Solution of the Likelihood Equations	530
15.2.2 Testing of Hypothesis: $\mu = \mu_0$	532
15.3 General p	534
15.4 EM Algorithm	538
15.5 Appendix	541
16 Missing Observations: Monotone Sample	551
16.1 Introduction	551
16.2 Tests and Estimates: Bivariate Case	552
16.3 General p : Estimation	556
16.4 General p : Testing for Location	560
16.5 Testing Equality of the Mean Components	565
16.6 Testing Equality of Two Mean Vectors	566
16.7 Problems	571
17 Bootstrapping	572
17.1 Introduction	572
17.2 Bootstrap Methods	573
17.3 Bootstrapping from Residuals	575
17.4 Confidence Interval for a Parametric Function	577
17.5 Bootstrapping in Multiple Regression Model	580
17.6 Testing About the Variance	584
17.7 Testing that the Mean Vector $\mu = \mu_0$	586
17.8 Testing the Equality of Two Mean Vectors	590
17.9 Bootstrapping Multivariate Regression	594
17.10 Testing that the Covariance Is a Specified Matrix	596

17.11 Testing the Equality of Two Covariance Matrices	599
17.12 Appendix	604
17.12.1 Asymptotic Distribution Theory	604
17.12.2 Consistency of Sample cdf	605
18 Imputing Missing Data	607
18.1 Introduction	607
18.2 Regression Model with Missing Observations	611
18.2.1 Bootstrap Estimate of the Covariance of $\mathbf{b}_1^*$	613
18.2.2 Bootstrap Distribution	615
18.3 Multivariate Data with Missing Observations	615
18.3.1 Description of Missing Observations	617
18.3.2 Imputing Missing Values and Estimates of Parameters	618
18.3.3 Bootstrap Estimate of the Covariance of $\hat{\mu}^*$	619
18.3.4 An Example	620
18.4 Bootstrap Method in Multivariate Incomplete Data	621
18.5 Appendix: Covariance of $\hat{\mu}^*$	623
A Some Results on Matrices	626
A.1 Notation and Definitions	626
A.2 Matrix Operations	628
A.3 Determinants	630
A.3.1 Cofactors of a Square Matrix	631
A.3.2 Minor, Principal Minor, and Trace of a Matrix	631
A.3.3 Eigenvalues and Eigenvectors	632
A.4 Rank of a Matrix	633
A.5 Inverse of a Nonsingular Matrix	634
A.6 Generalized Inverse of a Matrix	635
A.7 Idempotent Matrices	636
A.8 Positive Definite and Positive Semidefinite Matrices	636
A.9 Some Inequalities	637
A.10 Problems	638
B Tables	640
Bibliography	664
