Preface	x
1 Introduction	1
1.1 A simple example	1
1.2 Repeated measures experiments	4
1.3 Longitudinal data	5
1.4 An example	7
1.5 Balanced compound symmetry	11
1.5.1 Maximum likelihood estimation	11
1.6 Missing observations	21
1.7 Exercises	24
2 A General Linear Mixed Model	26
2.1 The Laird-Ware Model	26
2.2 The likelihood function	32
2.2.1 Numerical evaluation	33
2.3 Variance heterogeneity	37
2.4 Residuals	38
2.5 Restricted maximum likelihood	39
2.6 The EM algorithm	40
2.7 Predictions	42
2.7.1 Population mean curves	43
2.7.2 Individual predictions	43
2.8 Model selection	44
2.9 Testing contrasts	47
2.10 An example	50
2.11 Exercises	51

3	First Order Autoregressive Errors	52
3.1	Introduction	52
3.2	Equally spaced observations	53
3.3	Unequally spaced observations	56
3.4	Some simulated error structures	60
3.5	Other possible error structures	65
3.6	Circadian rhythms	67
3.7	Exercises	74
4	State Space Representations	77
4.1	A tracking example	78
4.2	The Kalman recursion	86
4.2.1	Missing observations	89
4.3	AR(1) process with observational error	90
4.3.1	Equally spaced data	90
4.3.2	Arbitrarily spaced data	92
4.4	Derivation of the Kalman recursion	94
4.5	Numerical considerations	96
4.6	Exercises	98
5	The Laird-Ware Model in State Space Form	100
5.1	Fixed effects	100
5.1.1	The algorithm	103
5.1.2	Estimating an unknown mean	107
5.2	Random effects in the state	111
5.2.1	An example	113
5.3	Predictions	115
5.4	Shrinkage estimates	116
5.5	Data analysis	117
5.6	Exercises	118
6	Autoregressive Moving Average Errors	120
6.1	Equally spaced observations	120
6.1.1	The initial state covariance matrix	123
6.1.2	Reparameterizing for stability	127
6.2	Unequally spaced observations	128
6.2.1	The state space method	131
6.3	An exercise	138

7 Nonlinear Models	139
7.1 Fitting nonlinear models	139
7.2 Nonlinear random effects	142
7.2.1 The Michaelis-Menten equation	142
7.2.2 Simulated data	147
7.2.3 A general nonlinear equation	151
7.3 A four parameter logistic model	154
8 Multivariate Models	156
8.1 Multivariate AR(1) errors	161
8.2 Multivariate mixed models	166
8.3 The multivariate algorithm	167
8.3.1 Model fitting strategy	170
8.4 A bivariate example	171
8.4.1 Predictions	177
8.5 Doubly labeled water	181
8.6 Exercise	183
Appendix	186
A FORTRAN subroutines	186
A.1 Matrix factorization	186
A.2 Equally spaced ARMA processes	189
A.3 Unequally spaced ARMA processes	197
A.4 A multivariate subroutine	205
References	218
Index	224
