	Preface	XIII
	<i>Geoffrey A. Manley</i>	
	List of Abbreviations	XVII
	Introduction	1
	<i>Geoffrey A. Manley and Georg Klump</i>	
1	Design plasticity in the evolution of the amniote hearing organ	7
	<i>Geoffrey A. Manley</i>	
1.1	The origin of the amniote hearing organ, the basilar papilla.....	7
1.2	The origin and evolution of the mammalian cochlea	8
1.3	The origin and evolution of the hearing organ of archosaurs	10
1.4	The origin and evolution of the hearing organ of lepidosaurs.....	12
1.5	General evolutionary trends in the physiology of amniote hearing organs	14
1.5.1	Functional principles seen in all auditory organs	14
1.5.2	Parallel trends in the evolution of amniote auditory organs	14
1.5.3	Specialization of hair-cell populations across the papilla in birds and mammals.....	15
2	Comparative anatomy and physiology of hearing organs	18
2.1	Anatomy of the cochlea in birds	18
	<i>Franz Peter Fischer, Otto Gleich, Christine Köppl and Geoffrey A. Manley</i>	
2.1.1	Anatomy and evolution of the avian basilar papilla	18
2.1.2	Basic structure of the avian hearing organ	20
2.1.3	The hair cells.....	22
2.1.4	Hair-cell ultrastructure and synapses	23
2.1.5	Gradients in hair-cell morphology.....	24
2.1.5.1	Gradients in the shape of the hair cells	25
2.1.5.2	Stereovillar bundle shape	26
2.1.5.3	Stereovillar bundle orientation	28
2.1.6	Hair-cell innervation.....	28
2.2	A special case of congenital hearing deficits: The Waterslager canary	31
	<i>Otto Gleich</i>	

2.3	Micromechanical properties of chicken hair-cell bundles..... <i>Jutta Brix and Geoffrey A. Manley</i>	33
2.4	Potassium concentration and its development in the chicken cochlea <i>Geoffrey A. Manley</i>	34
2.5	Discharge activity of afferent fibres in the avian hearing organ <i>Otto Gleich, Christine Köppl and Geoffrey A. Manley</i>	35
2.5.1	Spontaneous activity of afferent nerve fibres.....	36
2.5.2	Responses to simple tonal stimuli.....	38
2.5.3	Frequency selectivity.....	39
2.5.4	Excitation patterns on the starling hearing organ.....	41
2.5.5	Phase locking to tones.....	41
2.5.6	Birds and mammals – similarities and differences in auditory organs.....	43
2.6	Function of the cochlear efferent system – a comparative approach <i>Alexander Kaiser, Geoffrey A. Manley and Grit Taschenberger</i>	44
2.6.1	Why are birds valuable for studying hearing-organ efferents?	44
2.6.2	Comparative physiology of the avian efferent system.....	45
2.6.3	Putative efferent influences on otoacoustic emissions in the barn owl.....	45
2.6.4	Input to avian cochlear efferents.....	48
2.6.5	Speculations on the functional significance of cochlear efferents.....	48
2.7	The lagenar macula and its neural connections to the brainstem <i>Geoffrey A. Manley and Alexander Kaiser</i>	49
2.7.1	Efferent connections.....	50
2.7.2	Afferent connections	50
2.8	Anatomy of the cochlea and physiology of auditory afferents in lizards	52
	<i>Christine Köppl and Geoffrey A. Manley</i>	
2.8.1	Basilar-papilla morphology in the bobtail lizard	52
2.8.2	Characteristics of primary auditory afferent fibres in the bobtail lizard.....	54
2.8.3	A model of frequency tuning and tonotopic organization in the bobtail lizard.....	56
2.8.4	Basilar-papilla morphology in the Tokay gecko.....	57
2.8.5	A model of frequency tuning and tonotopic organization in the Tokay gecko	58
3	Cochlear frequency maps and their specializations in mammals and birds.....	60
3.1	Cochlear specializations in bats	61
	<i>Marianne Vater</i>	
3.1.1	Structure-function correlations in echolocating bats	61
3.1.2	Cochlear fine structure and immunocytochemistry	65
3.1.2.1	Receptor surface and tectorial membrane	66
3.1.2.2	Organization of OHCs and their attachments.....	67
3.1.2.3	Cochlear development in the horseshoe bat	69

3.2	Cochlear maps in birds.....	70
	<i>Otto Gleich, Alexander Kaiser, Christine Köppl and Geoffrey A. Manley</i>	
3.2.1	Frequency representation along the basilar papilla	70
3.2.2	Possible changes in function across the papilla's width	72
3.2.3	Development of body temperature in chickens – Implications for the development of frequency maps	73
3.3	The auditory fovea of the barn owl	75
	<i>Christine Köppl</i>	
4	Models of the human auditory system	76
4.1	Psychoacoustically-based models of the inner ear.....	76
	<i>Hugo Fastl for Eberhard Zwicker[†]</i>	
4.1.1	A hydrodynamic model of the human cochlea.....	76
4.1.2	An electronic model of the human cochlea	77
4.1.3	A computer model of the human cochlea	79
4.2	Linear model of peripheral-ear transduction (PET)	81
	<i>Ernst Terhardt</i>	
4.2.1	Basic definitions and features.....	81
4.2.1.1	The ECR filter	82
4.2.1.2	The CTF filter.....	82
4.2.1.3	Temporal behaviour	83
4.2.2	Setting PET's parameters	84
4.2.2.1	The ECR filter	84
4.2.2.2	The CTF filters	84
4.2.3	Simulation of the threshold of hearing.....	86
4.2.4	Simulation of tuning curves	87
4.2.5	Scaling of characteristic frequencies.....	87
4.2.6	Digital computation	88
4.2.7	PET and gammatone	89
4.3	Nonlinear mechanics of the organ of Corti.....	90
	<i>Frank Boehnke</i>	
5	Active mechanics and otoacoustic emissions in animals and man ...	93
5.1	Otoacoustic emissions in lizards.....	93
	<i>Geoffrey A. Manley</i>	
5.1.1	The origin of lizard SOAE.....	95
5.1.2	The influence of changes in head temperature on lizard SOAE	97
5.1.3	Interactions between SOAE and external tones	99
5.1.3.1	Level suppression by external tones	99
5.1.3.2	Facilitation by external tones.....	100
5.1.3.3	Shifts in SOAE frequency due to external tones.....	101
5.1.4	Distortion-product otoacoustic emissions in lizards	102
5.2	Otoacoustic emissions in birds.....	103
	<i>Geoffrey A. Manley and Grit Taschenberger</i>	
5.2.1	Simultaneous-evoked emissions in the starling	103

5.2.2	Spontaneous otoacoustic emissions in birds (SOAE)	103
5.2.3	Distortion-product OAE in the chicken, starling and owl	105
5.3	Otoacoustic emissions and cochlear mechanisms in mammals	106
	<i>Manfred Kössl</i>	
5.3.1	Acoustic distortions and the cochlear amplifier	108
5.3.2	Acoustic distortions and cochlear tuning	113
5.3.3	Enhanced auditory filters in bats.....	114
5.3.4	Distortion thresholds in mammals	119
5.4	Otoacoustic Emissions in human test subjects	120
	<i>Hugo Fastl for Eberhard Zwicker[†]</i>	
5.5	Properties of $2f_1$ - f_2 distortion product otoacoustic emissions in humans.....	127
	<i>Thomas Janssen</i>	
5.5.1	Influence of frequency ratio f_2/f_1 and level difference L1-L2	127
5.5.2	Stability of the DPOAE level.....	132
5.5.3	Relationship between DPOAE and hearing threshold	133
	in normal hearing	135
5.5.4	Suppression properties.....	135
5.6	Developing clinical applications of $2f_1$ - f_2 distortion-product otoacoustic emissions	136
	<i>Thomas Janssen</i>	
5.6.1	Monitoring cochlear dysfunction during recovery	136
5.6.2	Scanning of cochlear dysfunction in hearing loss ears with and without tinnitus.....	138
5.6.3	Prediction of hearing threshold	140
5.6.4	DPOAE as a clinical tool	141
6	Neural processing in the brain	142
6.1	Auditory brainstem processing in bats	142
	<i>Marianne Vater</i>	
6.1.1	The cochlear nucleus: Origin of parallel ascending pathways	142
6.1.1.1	Cytoarchitecture of the cochlear nucleus	142
6.1.1.2	Inputs, tonotopy and intrinsic connectivity of the CN	143
6.1.1.3	Chemoarchitecture of the CN.....	145
6.1.1.4	Physiology of the cochlear nucleus	146
6.1.1.5	Central connections of the CN	147
6.1.2	Superior olivary complex: the first stage of binaural interactions	148
6.1.2.1	Anatomy and connectivity of the principal nuclei of the SOC.....	149
6.1.2.2	Physiology of the SOC.....	150
6.1.2.3	Chemoarchitecture of the SOC	150
6.1.3	Lateral lemniscus	151
6.1.4	Inferior colliculus	151
6.2	Serotonergic innervation of the auditory pathway in birds and bats – implications for acoustical signal processing	152
	<i>Alexander Kaiser and Birgit Kuhn</i>	

6.3	Temporal processing in the lower brainstem.....	153
	<i>Benedikt Grothe</i>	
6.3.1	The role of neural delays in IID-coding of LSO cells	154
6.3.2	The role of inhibition in processing periodic stimuli.....	155
6.3.3	Temporal vs. spatial processing in the lower auditory brainstem.....	159
6.4	The barn owl as a model for high-resolution temporal processing in the auditory system	161
	<i>Christine Köppl</i>	
6.4.1	Does phase locking improve in the nucleus magnocellularis?.....	161
6.4.2	Frequency-specific adaptations of neuronal brainstem circuits	163
6.4.2.1	Neuronal and synaptic morphology	163
6.4.2.2	Axonal delay lines between N. magnocellularis and N. laminaris.....	164
6.5	Cortical physiology, sensorimotor interactions.....	165
	<i>Gerd Schuller</i>	
6.5.1	Auditory cortex in the horseshoe bat	165
6.5.1.1	Primary auditory field.....	166
6.5.1.2	Anterior dorsal field.....	167
6.5.1.3	Posterior dorsal field	167
6.5.1.4	Rostral dorsal field	167
6.5.1.5	Dorsal field of the dorsal auditory cortex.....	167
6.5.1.6	Ventral auditory field	168
6.5.2	Afferent and efferent connections of auditory cortical fields	168
6.5.2.1	Thalamocortical connections	168
6.5.2.2	Connection with other brain regions	169
6.5.3	The auditory cortex in the horseshoe bat: Summary and conclusions	170
6.5.4	Audio-vocal interaction in horseshoe bats.....	171
6.5.5	Peripheral vocalization system in the horseshoe bat	173
6.5.6	Where in the brain can vocalization be elicited?	174
6.5.6.1	Paralemniscal tegmental area	175
6.5.6.2	Pretectal area	177
6.5.7	Functional implications of the acoustical afferent connections to the pretectal area	178
6.5.8	Possible control of motor actions by efferent connections of the pretectal area	180
6.5.9	Superior colliculus	181
6.5.10	Nucleus cuneiformis and adjacent lateral periaqueductal grey, and vocalization	181
6.5.11	The descending vocalization system in the horseshoe bat: summary and conclusions	183
6.6	The processing of 'biologically relevant' sounds in the auditory pathway of a non-human primate	184
	<i>Peter Müller-Preuss and Detlev Ploog</i>	
6.6.1	The relationship of the auditory pathway to structures involved in sound production: Anatomy and physiology.....	184

6.6.2	Processing of species-specific vocalizations that are modulated in amplitude	186
6.6.2.1	Processing of sounds masked by a preceding stimulus	187
6.6.2.2	Processing of artificial amplitude-modulated sounds	189
7	Comparative animal behaviour and psychoacoustics	193
7.1	The European starling as a model for understanding perceptual mechanisms	193
	<i>Georg Klump, Ulrike Langemann and Otto Gleich</i>	
7.1.1	Auditory sensitivity: absolute thresholds	194
7.1.2	Frequency selectivity	195
7.1.3	Frequency discrimination	200
7.1.4	Temporal processing	204
7.1.4.1	Temporal resolution of the auditory system	204
7.1.4.2	Long term integration	207
7.1.4.3	Duration discrimination	208
7.1.5	Spectro-temporal integration: comodulation masking release	209
7.1.6	The processing of signals by the European starling's auditory system – conclusions	211
7.2	Mechanisms underlying acoustic motion detection	212
	<i>Hermann Wagner</i>	
7.2.1	The problem underlying acoustic-motion detection	212
7.2.2	Recent psychophysical and neurological findings on acoustic motion	213
7.2.3	Physiological correlates of acoustic motion detection in the barn owl	213
7.3	Comparative echolocation behaviour in bats	215
	<i>Gerhard Neuweiler</i>	
7.3.1	Field studies	215
7.3.1.1	Horseshoe bats	216
7.3.1.2	Gleaning bats	219
7.3.1.3	FM-bats	221
7.3.2	Insect abundance and prey selectivity	222
7.3.3	Time windows for echo perception	224
7.4	Echolocation behaviour and comparative psychoacoustics in bats ...	226
	<i>Sabine Schmidt</i>	
7.4.1	Texture perception by echolocation	226
7.4.2	Discrimination of target structure by the gleaning bat, <i>M. lyra</i>	227
7.4.3	A broadband spectral analysis model for texture perception	228
7.4.3.1	Outline of the model	228
7.4.3.2	Implications of the model	229
7.4.4	Perceptual categories for auditory imaging	230
7.4.4.1	Prevalence of absolute pitch	230
7.4.4.2	Collective pitch versus spectral pitches and timbre	232
7.4.4.3	Spontaneous classification of complex tones – evidence for collective pitch perception in the ultrasonic range	233

7.4.4.4	Frequency resolution and auditory filter shape in <i>M. lyra</i>	235
7.4.4.5	Perception of spectral pitches – corroboration of the broadband spectral-analysis model	237
7.4.4.6	Focused perception of single partials in complex tones	239
7.4.5	Psychoacoustical frequency and time-domain constants in bats	240
7.4.5.1	Discrimination performance in the frequency domain	240
7.4.5.2	Time constants in echolocating bats	241
8	The human aspect I: Human psychophysics	246
8.1	The presentation of stimuli in psychoacoustics	246
	<i>Hugo Fastl</i>	
8.2	Masking effects	247
	<i>Hugo Fastl</i>	
8.2.1	Post masking (forward masking)	247
8.2.2	Binaural Masking-Level Differences	249
8.3	Basic hearing sensations	251
	<i>Hugo Fastl</i>	
8.3.1	Pitch	251
8.3.2	Pitch strength	255
8.3.3	Fluctuation strength	257
8.4	Loudness and noise evaluation	258
	<i>Hugo Fastl</i>	
8.4.1	Loudness evaluation	258
8.4.2	Physical measurement of loudness and psychoacoustic annoyance .	261
8.4.3	Loudness of speech	262
8.4.4	Evaluation of road traffic noise	263
8.4.5	Evaluation of aircraft noise	264
8.4.6	Evaluation of railway noise	266
8.5	Perceived differences and quality judgments of piano sounds	268
	<i>Miriam N. Valenzuela</i>	
8.5.1	Perceived differences between piano sounds	268
8.5.2	Influence of sharpness on quality judgments of piano sounds	272
8.6	Identification and segregation of multiple auditory objects	274
	<i>Uwe Baumann</i>	
8.7	The role of accentuation of spectral pitch in auditory information processing	278
	<i>Claus von Rücker</i>	
8.7.1	Spectral pitch as a primary auditory contour	278
8.7.2	Accentuation as a cue for segregation	279
8.7.3	Physical signal parameters evoking accentuation	279
8.7.4	Improved perception of vowels by accentuation	280
8.7.5	Thresholds for the accentuation of part tones in harmonic sounds ...	283
8.7.6	Accentuation of pitch – discussion and outlook	285

9	Hearing impairment: Evaluation and rehabilitation	286
	<i>Karin Schorn and Hugo Fastl</i>	
9.1	Psychoacoustic tests for clinical use	286
9.1.1	Amplitude resolution – ΔL -test	286
9.1.2	Frequency selectivity – psychoacoustical tuning curves	288
9.1.3	Frequency discrimination – Δf measurement	290
9.1.4	Temporal integration	290
9.1.5	Temporal resolution.....	291
9.1.6	Melodic pattern discrimination test.....	293
9.2	Objective tests for clinical use	294
9.2.1	Delayed evoked otoacoustic emissions (DEOAE) for screening	294
9.2.2	Delayed-evoked and distortion-product otoacoustic emissions for hearing threshold determination.....	295
9.2.3	Delayed-evoked and distortion-product otoacoustic emissions as an objective TTS measurement	295
9.2.4	Evoked-response audiometry (ERA) for hearing threshold determination	296
9.2.5	Evoked-response audiometry (ERA) for hearing aid fitting	298
9.3	Rehabilitation with hearing aids, cochlear implants and tactile aids	299
9.3.1	Psychoacoustic basis of hearing aid fitting.....	299
9.3.2	Hearing aid fitting with in-situ measurement	299
9.3.3	Hearing aid fitting – earmold modifications with vents and horns....	301
9.3.4	Hearing aid fitting with loudness scaling	302
9.3.5	Hearing aid fitting with speech in noise	304
9.3.6	Experimental Hearing Aid.....	307
9.3.7	Cochlear implantation – Preliminary test, intra- and postoperative control.....	308
9.3.8	Speech processing with cochlear implant	309
9.3.9	Tactile Hearing Aids.....	310
10	References (Work of the collaborative research centre 204).....	312
11	References (Work outside the collaborative research centre 204).....	337
12	Appendices	349
12.1	Institutes involved in the collaborative research centre 204	349
12.2	Projects supported by the collaborative research centre 204.....	350
12.3	Members and coworkers of the collaborative research centre 204 ...	352
12.4	Doctoral (D) and habilitation (H) theses of the collaborative research centre 204.....	355
12.5	Guest scientists of the collaborative research centre 204.....	358
12.6	International and industrial cooperations of the collaborative research centre 204.....	360
