

TABLE OF CONTENTS

LIST OF CONTRIBUTORS.....	xiii
PREFACE.....	xxiii
OVERVIEW.....	xxvii
ACKNOWLEDGEMENTS.....	xxxii
Chapter 1. A REVIEW OF ENTERPRISE PROCESS MODELLING TECHNIQUES.....	1
1. Introduction	1
1.1 Enterprise modelling	2
1.1.1 The GERAM Framework.....	2
1.1.2 Enterprise process modelling	2
1.2 Significance of process modelling in the context of enterprise systems	3
1.3 Outline of the chapter	4
2. Review of Process Modelling Techniques	4
2.1 Data flow diagrams (DFD).....	5
2.2 IDEF0/IDEF3	6
2.2.1 IDEF0	7
2.2.2 IDEF3	8
2.3 CIMOSA	9
2.4 ARIS and its event-based process chain method.....	11
2.5 Event-driven process chain (EPC) method in SAP R/3	11
2.6 Integrated enterprise modelling (IEM) method.....	13
2.7 Toronto virtual enterprise (TOVE) method	14
2.8 Baan's dynamic enterprise modelling (DEM) technique	15
2.9 Unified Modelling Language (UML).....	17
2.10 Workflow management	18
2.11 Evaluation of process modelling techniques – a summary .	19
3. Modelling Next-Generation Enterprises	19
3.1 Modelling and incorporating distributed computing.....	20
3.2 Integrating process description and analysis	20
3.3 Linking engineering and business processes to support process improvement initiatives.....	21
3.4 Incorporating activity-based management approaches	21

4. The Distributed Integrated modelling of enterprises (DIME) framework	22
4.1 Petri nets as a theoretical base.....	22
4.2 DIME framework development	23
4.2.1 Enterprise analysis using Petri net models.....	26
4.2.2 Current and future work on the DIME framework.....	27
5. Conclusions	28
6. Acknowledgements	29
7. References	29

Chapter 2. DESIGN AND MANUFACTURING PROCESS MANAGEMENT IN A NETWORK OF DISTRIBUTED SUPPLIERS.....33

1. Introduction	35
2. Background	36
2.1 Why not just optimize?	37
2.2 Abstracting the key dimensions of the problem: What kind of problem is this?.....	37
2.3 Adaptive planning systems.....	38
2.4 Problem space perspective on process planning	39
3. Process modeling: A brief review	40
4. Functional Requirements of Process Management: Specification and Execution.....	43
4.1 Process Specification.....	44
4.2 Execution Environment.....	45
5. Description Of Midas System	46
5.1 Process grammar	46
6. Process Flow Generation and Execution.....	48
6.1 XML-based scalability	52
7. Percolation and Sensitivity Analysis: Process Expansion.....	53
7.1 Productions for Design Task	53
7.2 Productions for Manufacturing Task.....	55
8. A simple example.....	58
9. Conclusion.....	59

Chapter 3. FINITE AUTOMATA MODELING AND ANALYSIS OF SUPPLY CHAIN NETWORKS.....65

1. Introduction	65
2. Preliminaries.....	67
2.1 Supply Chains: Tasks and Dependencies.....	67
2.2 Discrete Event System Theory - A Control Theoretic Approach	69
2.3 Supervisory Controller	71
3. Supply Chain Modeling	72
3.1 Deriving the Behavioral Model.....	72
3.2 Deriving the Specification Model	77
4. Supply Chain Analysis	78
4.1 Supply Chain Consistency	79
4.2 Redundancy Checking.....	81
4.2.1 Control Specification Redundancy.....	81
4.2.2 Event Redundancy (partial observation).....	82
4.3 Event Controllability Analysis	83
4.4 Scalability.....	84
4.4.1 Task Scalability	84
4.4.2 Specification Scalability.....	85
5. "GOURMET-TO-GO"- A Case Study	86
6. Conclusion.....	93

Chapter 4. DISTRIBUTED CONTROL ALGORITHMS FOR SCALABLE DECISION-MAKING FROM SENSORS-TO SUPPLIERS.....101

1. Introduction	101
2. Feedback Control of Discrete Event-Timing	103
3. Modeling Event Timing Control Using Discontinuous Differential Equations	111
3.1 Definitions.....	113
3.1.1 Closure of Convex Hull.....	113
3.1.2 Measure Zero.....	117
3.1.3 Piecewise Continuous Function	119
3.1.4 Absolutely Continuous Function.....	120
3.2 Solution of Discontinuous Differential Equations	121
3.3 Distributed Arrival Time Control Solution	126

3.3.1	Solution in Decoupled Region	130
3.3.2	Solution in Dead-Zone Region.....	130
3.3.3	Solution in Discontinuity Region	131
3.3.4	Convex Hull Geometry	132
3.3.5	Steady-State Arrival Time.....	138
3.3.6	Two Part, One Machine Case.....	139
3.3.7	Three-Part, One-Machine Case	147
3.4	Extensions and Generalizations of Event Timing Control.....	147
4.	Unified Modeling and Control from Sensors-to-Suppliers	148
5.	Conclusions	153
6.	References	154

Chapter 5. COLLABORATIVE MULTIAGENT BASED INFORMATION INFRASTRUCTURE FOR TRANSPORTATION PROBLEM SOLVING.....161

1.	Introduction	162
2.	The Transportation problem.....	164
3.	AGENT Interactions	166
3.1	KQML and Logistics Language (LogL)	168
3.2	KOMI, interactions in link a	168
3.3	KQML interactions in link b	172
3.4	KQML interactions in link c	175
3.5	KQML interactions in link d	177
3.6	All Other Interaction Links	180
4.	Multiagent Model.....	181
4.1	The Model of a Master	182
4.2	The Model of a Slave	184
4.3	Putting It All Together	185
5.	Comparison with Other Research.....	187
6.	Conclusions	188

Chapter 6. IMPROVING SCALABILITY OF E-COMMERCE SYSTEMS WITH KNOWLEDGE DISCOVERY.....193

1.	Background	193
2.	Case Study: Online Auctions for Recyclable Products	195
3.	The Curse Of Dimensionality	197

3.1	Feature Selection	198
3.1.1	An Information Gain Filter	198
3.1.2	Correlation-Based Feature Selection.....	199
3.2	Clustering	200
3.2.1	Clustering Using the <i>k</i> -Means Algorithm	202
3.2.2	Clustering Using the CobWeb Algorithm.....	202
4.	Expediting the System Operations	204
4.1	Decision Trees.....	204
4.2	Support Vector Machines.....	207
4.3	Association Rule Discovery	210
5.	Improving Scalability of an Online Auction System	212
6.	Conclusions	213
	References	214

Chapter 7. A SCALABLE SUPPLY CHAIN INFRASTRUCTURE RESEARCH TEST-BED.....217

1.	Background	218
1.1	Introduction	218
1.2	Literature Review	219
2.	A Scalable SCI test-bed Architecture.....	223
2.1	Test-bed Components.....	223
2.2	SCI Test-bed Architecture.....	228
2.3	SCI Test-bed Integration Data Models.....	229
2.4	SCI Integration Business Models.....	231
3.	Advanced decision models.....	233
3.1	Available-To-Promise Decision Models.....	234
3.2.	Simulation-Based Decision Models	237
4.	Support for Other Research Projects.....	239
4.1	Performance Scalability in Supply Chain Infrastructures	239
4.2	Toshiba Global Supply Chain Model.....	242
4.3	Impact of Internet on Supply Chain Architectures.....	242
5.	Conclusions	243
6.	Acknowledgements	244
7.	References	244

Chapter 8. PUBLISH SUBSCRIBE MIDDLEWARE.....249

1.	Introduction.....	249
1.1	What is a publish subscribe system.....	250
1.2	Classification of publish subscribe system.....	251
1.2.1	Subject based.....	251
1.2.2	Content based.....	252
2.	Evolution of Publish Subscribe Systems.....	254
2.1	Internet News.....	254
2.2	Group Communication Systems.....	255
2.3	Linda.....	255
2.4	Information Bus.....	256
2.5	Tibco Rendezvous.....	257
2.6	Content Based Systems.....	258
3.	Design Issues in Content Based Systems.....	260
3.1	Event Matching and Delivery.....	262
3.2	Security in Content Based Systems.....	263
4.	Event Multicast in Content Based Systems.....	264
4.1	Ideal Algorithm.....	265
4.2	Flooding.....	266
4.3	Clustered Group Multicast (CGM).....	267
4.4	The Neighbor Matching Algorithm.....	270
4.5	Group Approximation Algorithm.....	271
4.6	Summary of Multicast Algorithms.....	273
5.	Secure end point delivery.....	274
5.1	Group Key Caching.....	275
5.1.1	Simple caching.....	277
5.1.2	Build-up cache.....	280
5.1.3	Clustered cache.....	281
5.1.4	Clustered popular cache.....	
5.1.5	Simulations.....	
5.2	Conclusions.....	
6.	Summary.....	

Chapter 9. EXPERIMENTAL STUDY OF SCALABILITY ENHANCEMENT FOR REVERSE LOGISTICS E-COMMERCE....287

1.	Introduction.....	287
2.	Description of Experimental Prototype.....	290

2.1	Roles of Manufacturer, Demanufacturer, and Recycler	290
2.2	Sealed Bid Double Auction (SBDA) Mechanism	292
3.	Experimental Design	293
3.1	Data Analysis	293
3.2	Results	296
4.	Auction Recommender	300
4.1	Constructing a Recommendation	302
5.	Conclusion.....	309

Chapter 10.. WEB-BASED DISTRIBUTED MULTI-AGENT ARCHITECTURE FOR IMPLEMENTING VALUE NETS.....313

1.	Introduction	314
2.	Literature Review	317
3.	Multi-Agent Architecture	318
4.	Agent Communication	320
4.1	Information/workflow within the multi-agent value net	320
4.2	BDI model	322
4.3	Semantics of the Valcomm Performatives	324
4.4	Multi-Agent interactions	325
4.4.1	Customer / Coordinator – Coordinator Interactions (Link A).....	326
4.4.2	Coordinator – Department (Link B).....	327
4.4.3	Internal Departmental-External Coordinator Interactions (Link C).....	327
5.	Implementation of Multi-agents for value nets	329
6.	Conclusions	331
7.	Future work	332
INDEX.....		335
