

CONTENTS

Series Editor's Introduction	v
Preface	viii
1. Introduction	1
1.1 Conceptualizations of Interaction Effects	2
1.1.1 Interaction Effects as the Difference Between Mean Differences	3
1.1.2 Interaction Effects as Treatment Effects	6
1.1.3 A Statistical Model for Classic Analysis of Variance	10
1.1.4 Factorial Designs and Mean Contrasts	12
1.1.5 What to Interpret: Differences Between Mean Differences or Treatment Effects/Residualized Means?	15
1.2 Subsidiary Analyses and Issues	20
1.2.1 Simple Main-Effects Analysis	20
1.2.2 The Choice of Error Terms	21
1.2.3 Graphical Representations of Interactions in 2×2 Designs	22
1.2.4 Multiple Contrasts and Experimentwise Error Rates	26
1.2.5 Statistical Power of Contrasts	31
2. Magnitude Estimation and Interval Estimation Approaches	33
2.1 Criticisms of Null Hypothesis Testing	33
2.2 Magnitude Estimation Approaches	34
2.2.1 Difference in Raw Means	35
2.2.2 Standardized Mean Difference	36
2.2.3 Percentage of Variance Accounted For	37
2.2.4 Unbiased Estimators	39
2.2.5 Criticisms of Indexes of Effect Size	41

2.3	Interval Estimation Approaches	45
2.3.1	Simultaneous Confidence Intervals	50
2.3.2	Criticisms of Interval Estimation Approaches	50
2.3.3	Defining a Small Confidence Interval	55

3. A Complete Numerical Example **56**

4. Designs With More Than Two Levels and Higher Order Designs **62**

4.1	A 3×2 Factorial Design	62
4.1.1	Testing the Omnibus Interaction	67
4.1.2	Conducting Interaction Contrasts	68
4.1.3	Simple Main-Effects Analysis	70
4.1.4	Additional Contrasts	71
4.1.5	Variance Partitioning	72
4.2	A $2 \times 2 \times 2$ Factorial Design	73
4.3	Four-Factor Designs	79
4.4	Graphical Presentations	80

5. Additional Considerations **81**

5.1	Violation of Model Assumptions	81
5.2	Unequal Sample Sizes	85
5.3	Measurement Error	86
5.4	Computer Analysis	88
5.5	Concluding Comments	89

Appendix: Parameter Estimates in the General Linear Model **91**

Notes **95**

References **97**

About the Author **103**
