Preface

iii

Part I: Biomaterials and Biocompatibility Issues

- | | | |
|----|--|-----|
| 1. | Biocompatibility: Review of the Concept and Its Relevance to Clinical Practice
<i>J. H. Boss</i> | 1 |
| 2. | Tissue Response to Implants: Molecular Interactions and Histological Correlation
<i>M. Cannas, M. Bosetti, M. Santin, and S. Mazzarelli</i> | 95 |
| 3. | Biomaterial-Related Infection: Role of Neutrophil Peptides
<i>Sandra S. Kaplan, Robert P. Heine, and Richard L. Simmons</i> | 119 |
| 4. | Biodegradable Biomedical Polymers: Review of Degradation of and In Vivo Responses to Polylactides and Polyhydroxyalkanoates
<i>V. Hasirci</i> | 141 |
| 5. | The Role of Free Radicals in Degradation of Biodegradable Biomaterials
<i>C. C. Chu and K. H. Lee</i> | 157 |

Part II: Evaluation of Biomaterials

- | | | |
|----|--|-----|
| 6. | In Vitro Testing of Cytotoxicity of Materials
<i>G. Ciapetti, D. Granchi, C. R. Arciola, E. Cenni, L. Savarino, S. Stea, L. Montanaro, and A. Pizzoferrato</i> | 179 |
| 7. | Animal Models for Preclinical Testing of Medical Devices
<i>H. V. Mendenhall</i> | 199 |
| 8. | Blood–Biomaterial Interaction: A Review of Some Evaluation Methods
<i>E. Cenni, C. R. Arciola, G. Ciapetti, D. Granchi, L. Savarino, S. Stea, L. Montanaro, and A. Pizzoferrato</i> | 205 |
| 9. | New Optical Characterization Technique for Synthetic Biomaterials
<i>C. C. Chu</i> | 231 |

Part III: Bioactive Materials and Delivery Vehicles

- | | | |
|-----|--|-----|
| 10. | Polymeric Drug Delivery to the Brain
<i>Zvi H. Israel and Abraham J. Domb</i> | 253 |
| 11. | Tissue Adhesives for Growth Factor Drug Delivery
<i>John Bowman, Tom Barker, Barbara Blum, Deepak Kilpadi, and Dale Feldman</i> | 261 |
| 12. | Drug Delivery Systems for the Treatment of Restenosis
<i>Ilia Fishbein, Michael Chorny, Irit Gati, Laura Rabinovich, and Gershon Golomb</i> | 313 |

13.	Liposomes Coated with Bioactive Polysaccharides for Use as Drug Delivery Systems <i>Didier Letourneur and Maud Cansell</i>	337
14.	Polysaccharide Biomaterials as Drug Carriers <i>Chee-Youb Won and Chih-Chang Chu</i>	355
15.	Bone Morphogenetic Proteins and Biomaterials as Carriers <i>Kazuhisa Bessho, Joo L. Ong, and Tadahiko Iizuka</i>	373

Part IV: Ceramic and Metallic Materials in Orthopedics

16.	Pyrolytic Carbon as an Implant Material for Small Joint Replacement <i>Stephen D. Cook, Robert D. Beckenbaugh, Laura Popich Patrón, Samantha L. Salkeld, and Jerome J. Klawitter</i>	383
17.	Porous Ceramics for Intra-Articular Depression Fracture <i>Hajime Ohgushi, Masao Ishimura, Takashi Habata, and Susumu Tamai</i>	397
18.	New Insights in the Biological Effects of Wear Debris from Total Joint Replacements <i>Michael C. D. Trindade, R. Lane Smith, Joshua Jacobs, and Stuart B. Goodman</i>	407
19.	Clinical Application of Calcium Hydroxyapatite Ceramic in Bone Tumor Surgery <i>Hideki Yoshikawa and Atsumasa Uchida</i>	433
20.	Bone Development and Bone Structure Depend on Surface Roughness and Structure of Metallic Implants <i>C. M. Müller-Mai, C. Voight, G. Berger, and U. M. Gross</i>	457
21.	Improved Bearing Systems for THP Using Zirconia Ceramic <i>B. Cales, L. Blaise, and F. Villermaux</i>	483

Part V: Absorbable Orthopedic Fixation Devices

22.	Biodegradable Fracture Fixation Devices <i>M. van der Elst, C. P. A. T. Klein, P. Patka, and H. J. Th. M. Haarman</i>	509
23.	Resorbable Buffered Internal Fixation Devices <i>Yu Wang, Donald L. Wise, and Yung-Yueh Hsu</i>	525
24.	In Vitro Study of Buffered Biodegradable Fracture Fixation Devices <i>Yankai Zhang, Donald L. Wise, and Yung-Yueh Hsu</i>	553
25.	In Vitro and In Vivo Degradation Studies of Absorbable Poly(orthoester) Proposed for Internal Tissue Fixation Devices <i>Kirk P. Andriano, A. U. Daniels, and Jorge Heller</i>	577
26.	Buffered Biodegradable Internal Fixation Devices <i>Debra J. Trantolo, Kai-Uwe Lewandrowski, Joseph D. Gresser, and Donald L. Wise</i>	603
27.	Biocompatibility of Self-Reinforced Poly(lactide-co-glycolide) Implants <i>Debra J. Trantolo, Kai-Uwe Lewandrowski, Joseph D. Gresser, Kevin J. Bozic, and Donald L. Wise</i>	619

Part VI: Biomaterials for Reconstruction of Bony Defects

28.	Coating of Cortical Allografts with a Bioresorbable Polymer Foam for Surface Modification by Periosteal Cell Seeding <i>Kai-Uwe Lewandrowski, Maurice V. Cattaneo, Joseph D. Gresser, Debra J. Trantolo, Lawrence Bonassar, Donald L. Wise, and William W. Tomford</i>	639
-----	---	-----

29.	Repair of Articular Cartilage Defects Using Biomaterials and Tissue Engineering Methods <i>Todd D. Bell, Yuehuei H. An, and Richard J. Friedman</i>	659
30.	Engineering of Resorbable Grafts for Craniofacial Reconstruction <i>Joseph D. Gresser, Kai-Uwe Lewandrowski, Debra J. Trantolo, and Donald L. Wise</i>	675
31.	Preclinical Evaluation of Bone Graft Substitutes <i>Christopher V. Bensen, Yuehuei H. An, and Richard J. Friedman</i>	699

Part VII: Collagen-Based Biomaterials

32.	Stabilization of Collagen in Medical Devices <i>John A. M. Ramshaw, Veronica Glattauer, and Jerome A. Werkmeister</i>	717
33.	Immunology of Collagen-Based Biomaterials <i>Jerome A. Werkmeister and John A. M. Ramshaw</i>	739
34.	Collagen Scaffolds for Tissue Regeneration <i>Frederick H. Silver and David L. Christiansen</i>	761

Part VIII: Considerations for Biomaterials in Skin Applications

35.	Tissue Assessment of Skin Substitutes <i>Dale Feldman, Tom Barker, Barbara Blum, John Bowman, Deepak Kilpadi, and Robert Redden</i>	773
36.	Biomaterial-Enhanced Regeneration for Skin Wounds <i>Dale Feldman, Tom Barker, Barbara Blum, John Bowman, Deepak Kilpadi, and Robert Redden</i>	807
37.	Ultrasound for Modulation of Skin Transport Properties <i>Samir Mitragotri, Robert Langer, and Joseph Kost</i>	843

Part IX: Biomaterials: Past and Future

38.	Properties and Clinical Applications of Shape Memory Alloys <i>F. J. Gil and J. A. Planell</i>	855
39.	Chitin and Its Derivatives <i>Mutsuhiro Maeda, Yukio Inoue, Kazuo Kaneko, Tsuyoshi Sugamori, Hideaki Iwase, and Ryouichi Tsurutani</i>	867
40.	Biological Activity of Hydroxamic Compounds <i>Constantin V. Uglea and Daniela Spridon</i>	881
41.	Development of a Modified Fibrin Adhesive: What Can We Learn from Biological Adhesion Mechanisms? <i>Frederick H. Silver, Russell T. Kronengold, Ming-Che Wang, Dominick Benedetto, and David L. Christiansen</i>	893
