

CONTENTS

Introduction to the series	v
----------------------------	---

Chapter 1

Introduction

DAVID A. HENSHER and KENNETH J. BUTTON	1
--	---

1. Introduction	1
2. Transport and the environment	3
3. The Handbook	5

Chapter 2

Environmental Concepts – Physical and Economic

WERNER ROTHENGATTER	9
---------------------	---

1. Introduction	9
2. Physical basis of environmental impacts	13
2.1. The choice of indicators	13
2.2. Physical measurement and the responsibility of the transport sector	18
3. Treatment of environmental risk by physical (hard) constraints	21
3.1. The principles of ecological economics	21
3.2. Safe minimum standards	22
3.3. Environmental legacy	22
4. Economic concepts for the evaluation of environmental impacts	24
4.1. The welfare maximization approach	24
4.2. Risk approach	27
5. A sustainable development of the transport system	30
6. Conclusions	33
References	34

Chapter 3

Climate Change

MANFRED LENZEN, CHRISTOPHER DEY and CLIVE HAMILTON	37
--	----

1. Introduction	37
1.1. The greenhouse effect and the radiative forcing of climate	38
1.2. Sources of greenhouse gas emissions	42
1.3. Equity and sustainability in the context of climate change	42
1.4. History of greenhouse gas emissions	45
1.5. International negotiations	48
2. Transport and greenhouse gas emissions	52

2.1. Mobile sources	52
2.2. History of emissions	53
3. Conclusions: the role of transport in future abatement efforts	55
References	58

Chapter 4

Air Quality	
BRITT A. HOLMÉN and DEBBIE A. NIEMEIER	61
1. Introduction	61
2. Mobile source emissions overview	64
2.1. On-road sources	65
2.2. Off-road sources	68
3. Important issues facing us	72
3.1. Fine particles	72
3.2. Toxics	74
References	76

Chapter 5

The Economics of Noise	
DAVID GILLEN	81
1. Introduction	81
2. The economics of noise	83
3. Externalities and social cost	83
4. Social cost and strategy choice	84
4.1. Property rights for noise	87
5. Airport noise measures	87
5.1. Assessing the costs of noise management strategies	88
5.2. Assessing the benefits of noise management strategies	89
6. Summary	93
References	95

Chapter 6

Safety	
IAN SAVAGE	97
1. Introduction	97
2. Estimating the risks	97
2.1. The big picture	97
2.2. Health risks versus environmental risks	99
2.3. Quantitative risk assessment	100
3. Risk assessment	102
3.1. Intolerable and negligible risks	102
3.2. ALARP risks	103

4. Market forces and failures	105
4.1. Market failures	105
4.2. The law and economics of externalities	106
5. Is liability sufficient?	108
5.1. Some types of financial harm are ineligible for compensation	108
5.2. Emergency response costs are borne by the public	109
5.3. Non-pecuniary losses	109
5.4. Liability is not accurately reflected in pricing	110
5.5. Bystanders prefer zero risk	110
5.6. Risk perceptions may differ from reality	111
5.7. Liability is an “after the fact” remedy	112
6. Public policy	113
7. Summary	115
References	116

Chapter 7

Amenity and Severance

SUSAN HANDY

1. Introduction	117
2. Defining the concepts	118
2.1. Amenity	118
2.2. Severance	120
2.3. The connection between amenity and severance	122
3. Techniques for assessing amenity and severance	123
3.1. Assessing amenity	124
3.2. Measuring severance	128
3.3. Incorporating amenity and severance into composite measures	130
4. Policies to improve amenity and reduce severance	131
4.1. Improving amenity	131
4.2. Reducing severance	134
5. Conclusions	138
References	139

Chapter 8

Transportation Fuels – A System Perspective

BENGT JOHANSSON

1. Introduction	141
2. Fuel chains – an introduction	142
3. Primary energy sources for transportation fuels	143
4. Conventional fuels in ICEVs	144
5. Alternative fuels – technologies and emissions	146
5.1. Methane gas	146

5.2. Biodiesel	146
5.3. Ethanol	146
5.4. Methanol and dimethyl ether (DME)	147
5.5. Hydrogen	147
5.6. Electricity	148
5.7. The use of alternative fuels in HEVs and FCEVs	148
6. Fuel cycle emissions	148
7. Environmental and resource aspects of renewable energy technologies	150
8. Economic issues – a focus on alternatives	152
9. Discussion	155
References	156

Chapter 9

Fuel Options

MUKESH KHARE and PRATEEK SHARMA	159
1. Introduction	159
2. Types of fuels	160
2.1. Gasoline	160
2.2. Gasoline fuel properties and their effects on emissions	161
2.3. Diesel	161
2.4. Type and effect of emissions from conventional fuel-driven vehicles	164
3. Alternative fuels	165
3.1. What are AFs?	166
3.2. Why are AFs important?	166
3.3. AF characteristics	167
4. Types of AFs	168
4.1. Compressed natural gas	168
4.2. Liquefied petroleum gas	170
4.3. Methanol	172
4.4. Ethanol	173
4.5. Biodiesel	174
4.6. Hydrogen	175
4.7. Electricity	177
5. Greenhouse gas emissions	178
6. Factors influencing the large-scale use of AFs	179
6.1. Cost	179
6.2. End use considerations	180
6.3. Life cycle emissions	180
7. Conclusions	181
Acknowledgments	182
References	182

*Chapter 10***Cleaner Vehicles**

DANIEL SPERLING	185
1. Introduction	185
2. Recent history of alternative fuels	185
3. Internal combustion engines	187
3.1. Spark ignition (gasoline) engines	187
3.2. Diesel engines	188
4. Toward electric-drive vehicle technology	189
4.1. Battery electric vehicles	190
4.2. Hybrid electric vehicles	191
4.3. Fuel cell vehicles and hydrogen	193
5. Conclusions	198
References	198

*Chapter 11***Carbon Dioxide Emissions from Transportation: Trends, Driving Factors, and Forces for Change**

LEE J. SCHIPPER and LEWIS FULTON	203
1. The CO ₂ problem: the policy imperative after Kyoto	203
2. Underlying factors affecting CO ₂ emissions for travel and freight	204
2.1. Passenger transport	206
2.2. Freight transport	212
2.3. Non-IEA countries	216
3. The future	219
3.1. Technology	219
3.2. Policies under development	222
References	224

*Chapter 12***Transport Energy and Emissions: Buses**

JOHN STANLEY and PAUL WATKISS	227
1. Scope	227
2. Air pollution	228
2.1. Choice of pollutants and impacts	228
2.2. Criteria emissions from heavy-duty motor vehicles	229
2.3. Diesel	232
2.4. Alternative fuels	233
2.5. Quantifying and valuing air pollution effects	236
3. Climate change	238
3.1. Emissions	238

3.2. Putting a cost on greenhouse gas emissions	239
3.3. Charges per litre	241
4. Public and private transport	242
5. Conclusions	244
References	244

Chapter 13

Transport Energy and Emissions: Urban Public Transport	
STEPHEN POTTER	247
1. Urban public transport and energy use	247
2. Measuring vehicle energy and emissions	248
3. Air quality emissions	248
4. Climate change emissions	251
5. Improving energy and emissions from public transport	256
6. Energy and emissions at the systems level	259
7. Conclusions	261
References	261

Chapter 14

Transport Energy and Emissions: Aviation	
HUGH SOMERVILLE	263
1. Background	263
1.1. The industry	263
1.2. Aviation and sustainable development	264
2. Emissions	266
2.1. Local air quality	266
2.2. Global impact	268
2.3. Aviation and global warming	269
2.4. Regulatory controls	272
2.5. Market-based measures	272
2.6. Voluntary measures	274
2.7. Inefficiencies	275
2.8. What are airlines doing	275
3. The future	276
4. Conclusion	277
References	277

Chapter 15

Environmental Impacts of Shipping	
WAYNE K. TALLEY	279
1. Introduction	279
2. Vessel oil spills	279

3. Ballast water disposal	285
4. Air pollution	287
5. Anti-fouling pollution (tributyltin)	287
6. Dredging	288
7. Vessel scrapping	289
8. Waste disposal at sea	289
9. Summary	290
References	290

Chapter 16

Transport Energy and Emissions: Rail	
ALAIN BONNAFOUS and CHARLES RAUX	293
1. Introduction	293
2. The historical association between rail and energy efficiency	293
2.1 From the first rails ...	294
2.2 ... to spatial expansion	294
3. Energy use and pollution: some orders of magnitude	295
3.1 The energy problem	295
3.2 The problem of negative impacts	297
4. From average values to realities in the field	298
4.1 Varied energy balance sheets	299
4.2 Negative impacts and carbon dioxide emissions	300
5. So what is the optimum policy?	301
5.1 Should we attract travelers to trains?	301
5.2 A very topical example for freight	304
5.3 Evaluation still remains to be done	306
6. Conclusion	306
References	307

Chapter 17

Environmental Impact Assessment for Sustainable Transport	
SUNDER L. DHINGRA, K.V.K. RAO and V.M. TOM	309
1. Introduction	309
2. The environmental impact assessment process	311
3. The transport model	311
4. Air pollution	312
5. Noise impact assessment	314
6. Ecological impacts	316
7. Social and economic impacts	318
8. Travel impacts	320
8.1 Transport congestion indicator	321
8.2 Transport efficiency index	321

9. Implementation of EIA	322
10. A case study	322
10.1. The Mumbai Urban Transport Project	322
10.2. The EIA process	323
10.3. Transport modeling	324
10.4. Air quality impacts	324
10.5. Noise impacts	325
10.6. Ecological impacts	325
10.7. Social impacts	325
10.8. Travel impacts	326
10.9. EIA evaluation	326
10.10. Inferences	328
11. Conclusion	328
References	329

Chapter 18

Transport Investment Appraisal and the Environment	
PETER NIJKAMP, BARRY UBBELS and ERIK VERHOEF	333
1. Introduction	333
2. Transport infrastructure investment and appraisal methods	334
3. CBA in transport: some issues relevant for environmental appraisal	336
3.1. Welfare measurement in applied CBAs: social surplus	337
3.2. CBA under various “second-best” conditions	337
3.3. Discounting	341
3.4. Spatial scope of CBAs	343
3.5. Transport appraisal and environmental sustainability	344
4. The valuation of environmental effects from transport	347
4.1. Environmental effects of transport	347
4.2. The valuation of environmental externalities	348
4.3. Some recent estimates of environmental external costs of transport	351
5. Conclusion	353
Acknowledgments	354
References	354

Chapter 19

Evaluation of Environmental Impacts	
EMILE QUINET	357
1. Introduction	357
2. The scope of the analysis	357
3. The objectives of the evaluation	358

4. Methodological issues	359
5. Evaluation by type of impact	362
5.1. Non-quantifiable impacts	362
5.2. Quantifiable impacts which are non-monetizable or monetizable only with difficulty	363
5.3. Quantifiable and monetizable impacts	365
6. The presentation in perspective and results of the studies	369
7. Conclusions	371
References	373

Chapter 20

Valuation of Environmental Externalities

WIKTOR ADAMOWICZ	375
1. Introduction	375
2. The damage function approach	377
3. Value and valuation techniques	378
3.1. Change in consumer and producer surplus	379
3.2. Avoided costs	379
3.3. Averting behavior	379
3.4. Hedonic price methods	379
3.5. Contingent valuation	380
3.6. Choice experiments	380
3.7. Travel cost models	381
4. Valuation of non-health end-points	381
4.1. Valuation of agricultural and forest impacts	381
4.2. Valuation of recreation impacts	383
4.3. Valuation of other non-health impacts	385
4.4. Passive use values	386
5. Examples of non-health values	387
6. Conclusions	387
Acknowledgment	388
References	388

Chapter 21

Valuation Case Studies

JUAN DE DIOS ORTÚZAR and LUIS IGNACIO RIZZI	391
1. Introduction	391
2. Random utility and SP methods	392
3. First case study: interurban road accidents	394
3.1. The choice context	396
3.2. Discrete choice modeling	396
3.3. Introduction of socio-economic variables	399

4. Second case study: valuation of local air pollution	400
4.1. Definition of the air quality attribute	400
4.2. Identification of attributes and selection of measurement units	401
4.3. Data collection strategy	402
4.4. Modeling results	402
5. Third case study: valuation of noise	404
6. Summary	407
Acknowledgments	408
References	408

Chapter 22

The Health Effects of Motor Vehicle-related Air Pollution

DONALD R. McCUBBIN and MARK A. DELUCCHI	411
1. Introduction	411
2. Air emissions from motor vehicle use	412
3. Exposure to ambient air pollution related to motor vehicle use	413
4. Health effects of exposure to motor vehicle air pollution	414
4.1. Particulate matter	415
4.2. Ozone	418
4.3. Carbon monoxide	418
4.4. Nitrogen dioxide	419
4.5. Sulfur dioxide	419
4.6. Toxic air pollutants	420
5. Valuing the health effects of motor vehicle air pollution	421
5.1. Valuing health effects using damage function approach	421
6. Analyses of the social cost of the health effects of motor vehicle air pollution	423
7. Unanswered questions	424
References	425

Chapter 23

Environmental Externalities of Motor Vehicle Use

MARK A. DELUCCHI	429
1. Introduction	429
2. Definitions and scope	430
2.1. What is an externality?	430
2.2. Scope of the chapter	431
3. External environmental costs of motor vehicle use	432
3.1. General method	432
3.2. Air pollution: health effects	433
3.3. Air pollution: reduced visibility	434

3.4. Air pollution: crop losses	437
3.5. Air pollution: material damage	438
3.6. Air pollution: forest damage	439
3.7. Climate change	440
3.8. Noise	441
3.9. Water pollution: large oil spills	444
3.10. Water pollution: other	444
3.11. Other external environmental costs of motor vehicle use	445
3.12. Summary of environmental external costs of motor vehicle use	445
4. Some applications	445
4.1. Evaluating alternative fuels	445
4.2. Mode choice	446
4.3. Trade-offs between urban air pollution and climate change	447
4.4. Motor vehicle pricing, land use, and transit	447
4.5. Optimal pricing, taxation, and investment	447
5. Conclusion	448
References	448

Chapter 24

Valuation of Safety	
MICHAEL JONES-LEE and GRAHAM LOOMES	451
1. Introduction	451
2. Valuing safety: issues of principle	452
3. Empirical estimates of WTP-based values of safety	455
4. WTP-based values of road safety	456
5. WTP-based values of rail safety	457
6. The valuation of safety by Railtrack	458
7. Summary and conclusion	460
References	462

Chapter 25

Location Externalities: Effects on Modeling, Infrastructure Provision and Optimal Planning	
FRANCISCO MARTÍNEZ	463
1. Introduction	463
2. The land use theoretical model	465
3. An operational model	468
4. Scenarios and benefits	469
5. Optimal planning	471
5.1. Social prices for land expropriation	472
5.2. Optimal land pricing	475
6. Summary	477

Acknowledgments	477
References	478

Chapter 26

Macroeconomic Policies and the Environment	
STEIN HANSEN	481
1. Introduction	481
2. Do we need a “green GDP”?	481
3. Environmental impacts of macroeconomic policies	485
4. Macro-impacts of environmental policies and technological progress	491
5. Mainstreaming environmental impacts into macroeconomic analyses	493
References	494

Chapter 27

History of Environmental Legislation	
PETER R. STOPHER	497
1. Introduction	497
2. The emergence of modern environmental legislation	499
3. US legislation on transport and the environment	502
3.1. The National Environmental Protection Act of 1969	502
3.2. Subsequent US federal legislation	505
3.3. Other legislation in the USA	509
4. Legislation on transport and the environment in other countries	509
5. Australian legislation on transport and the environment	510
6. Conclusions	513
References	513

Chapter 28

International Coordination of Environmental Policies and Multilateral Environmental Agreements	
JEROEN C.J.M. VAN DEN BERGH and NURIA CASTELLS	515
1. The need for international coordination of environmental policies	515
2. Environmental policy theory: from a national to an international perspective	516
3. Theories of multilateral environmental agreements	518
4. MEAs in practice	521
5. Conclusions	526
Acknowledgment	526
References	526

Chapter 29

Environmental Pricing in Transport	
EDWARD CALTHROP and STEF PROOST	529
1. Introduction	529
2. Rationale for environmental taxes	529
2.1. Efficient outcome	530
2.2. Choice of instruments	531
2.3. No intervention	532
2.4. Emissions tax	532
2.5. Emissions subsidy	533
2.6. A product tax (or kilometer tax)	534
2.7. Technological standard	535
2.8. Comparing instruments	535
3. Implementation issues	538
3.1. Unavailability of emissions tax	538
3.2. Variability in air pollution damage	539
4. Comparison with multiple distortions	540
4.1. Road congestion and air pollution	540
4.2. Interactions between transport markets and distorted labor markets	542
4.3. Equity impacts and institutional issues	543
5. Conclusions	543
Acknowledgements	544
References	544

Chapter 30

Planning for Sustainable Environmental Futures	
DAVID GILLINGWATER and STEPHEN ISON	547
1. Introduction	547
2. Planning and sustainable development – principles	547
3. Planning sustainable environmental futures	552
3.1. Case study – local transport plans and planning policy guidance	554
3.2. Case study – new settlement plans	558
4. Conclusions	561
References	562

Chapter 31

Environmental Justice Applications in Transport: The International Perspective	
RAHAF ALSNIH and PETER R. STOPHER	565
1. Introduction	565
2. Background	566
2.1. Definition	568

3. Legislation	569
4. The need to address environmental justice in transport planning	570
5. Transport and land use interrelationships	572
6. Transport and environmental justice: current practices	573
7. Data issues and model estimates	575
7.1. Data limitations and recommendations	577
8. International applications for environmental justice	579
9. Conclusion	580
Appendix. Assessing Title VI capability – review questions: an attachment to the Federal Highway Administration and Federal Transit Administration memorandum <i>Implementing Title VI Requirements in Metropolitan and Statewide Planning</i> , October 1999	581
References	583

Chapter 32

Winners and losers in Transport Policy: on Efficiency, Equity, and Compensation

PIET RIETVELD	585
1. Introduction	585
2. A politico-economic model of transport policy	586
3. Compensation in transport policy.	591
4. A joint framework for equity and efficiency in transport policy	593
5. Equity concepts	595
6. Conclusion	599
References	600

Chapter 33

Unintended Effects of Policies

PHIL GOODWIN	603
1. Background	603
2. Examples of problems	604
2.1. Does road building to divert traffic from environmentally sensitive areas result in an overall increase in traffic?	604
2.2. Does town center pedestrianization reduce trade?	606
2.3. Does transport investment discourage economic growth and regeneration?	607
2.4. Do park-and-ride schemes divert people from public transport?	609
2.5. Does reallocating road space for environmental improvements cause traffic chaos in neighboring areas?	610
3. Conclusions	611
References	612

*Chapter 34***Global Warming and Emission Trading**

TRUONG PHUOC TRUONG	615
1. Introduction	615
2. Global warming as a technological and climate change issue	617
3. Global warming as an economic issue	618
4. Emission trading as an instrument for coordinating GHG emission reduction activities	619
4.1. Determination of the initial volume of permits	620
4.2. Distribution of emission permits	623
4.3. Emission trading and efficiency gains	624
4.4. Other issues relating to emission trading	626
4.5. Free trade in goods and free trade in emission permits	629
References	631

*Chapter 35***Travel, Tourism, and the Environment**

KENNETH J. BUTTON	633
1. Introduction	633
2. Background	634
2.1. The history	634
2.2. The magnitude	635
2.3. Transportation	637
3. Transportation–tourism–environmental linkages	637
4. The environmental implications	639
4.1. The consumption effect	639
4.2. The access effect	640
4.3. The tourist effect	640
4.4. Ecotourism	643
5. Policy responses	644
6. Conclusions	645
References	645

*Chapter 36***Gender, Transportation, and the Environment**

AMANDA ROOT and LAURIE SCHINTLER	647
1. Introduction	647
2. Women and transport	648
2.1. Distance traveled	649
2.2. Licensing and auto ownership	650
2.3. Mode of transportation	651

2.4. Trip purpose and complexity of trip-making	652
3. Women and environmentalism	653
3.1. Mobility needs of women	654
3.2. Women and traffic management	656
4. Transportation planning and modeling	658
5. Policy implications and conclusions	660
References	662

Chapter 37

Logistics and the Environment

ALAN C. MCKINNON	665
1. Introduction	665
2. Reducing transport intensity	667
2.1. Reconfiguring production and distribution systems	670
2.2. Pattern of sourcing	671
2.3. Vehicle routing	672
3. Transferring freight to less environmentally damaging modes	673
4. Improving vehicle utilization	674
4.1. Empty running	674
4.2. Load factors on laden trips	675
4.3. Legal limits on vehicle size and weight	679
5. City logistics	680
6. Conclusion	682
References	683

Chapter 38

Reverse Logistics: An Overview and a Causal Model

SHAMS RAHMAN	687
1. Introduction	687
2. Motivation for reverse logistics	688
2.1. Environmental considerations	689
2.2. Government policy and legislation	689
2.3. Economic considerations	690
2.4. Shift toward buying sets of services	690
3. Characteristics of reverse logistics	690
3.1. Supply–demand balance	692
3.2. Accumulation and shortage of parts	692
3.3. Logistical network	692
3.4. Transportation	693
4. Recovery processes and its hierarchy	693
5. Modeling reverse logistics systems	695
5.1. Network models for reuse	696

5.2. Network models for remanufacturing	697
5.3. Network models for recycling	698
6. An effective reverse logistics system	700
7. Conclusion	704
References	704

Chapter 39

Transportation of Hazardous Goods and Materials	
WILLIAM G. WATERS II	707
1. Introduction	707
2. Hazardous materials and transportation	707
2.1. Regulatory obligations and incident reporting	708
2.2. Rationales for regulation	709
3. Hazmat studies	710
3.1. Aggregate studies of hazmat incidents and their costs	710
3.2. QRA of hazmat shipments and regulations	715
3.3. Reducing risks or their consequences	721
4. Challenges in risk analysis of hazmat transportation	722
5. Conclusions	723
Acknowledgements	724
References	724

Chapter 40

Public Attitudes	
TOMMY GÄRLING, PETER LOUKOPOULOS and MARTIN LEE-GOSSELIN	725
1. Introduction	725
2. Attitude concepts	725
3. Environmental values	728
4. Changing public attitudes related to travel behavior	730
5. Summary and conclusions	735
References	735

Chapter 41

Travel Behavior Change through Individual Engagement	
GEOFF ROSE and ELIZABETH AMPT	739
1. Introduction	739
2. Evolution of travel behavior change programs	740
3. The nature of existing travel behavior change programs	743
3.1. IndiMark	743
3.2. Travel Blending	745
4. Impacts of travel behavior change programs	747
4.1. At the level of the individual	748

4.2. Aggregate changes	748
4.3. Financial and economic evaluation	751
5. What remains to be learned	753
6. Conclusions	754
References	754

Chapter 42

Packaging Policies to Address Environmental Concerns	
ERAN FEITELSON	757
1. Introduction	757
2. Generating effective packages	759
2.1. Single-goal packages	759
2.2. Multiple-goal policy packages	761
3. Politically acceptable packages	762
4. Institutional, temporal and spatial considerations	764
4.1. Spatial scale and time horizons	765
4.2. Institutional aspects	766
5. Conclusions	768
References	769

Chapter 43

The Street: Integrating Transport and Urban Environment	
STEPHEN MARSHALL	771
1. Introduction	771
2. The street as a microcosm	772
3. Recognition and prioritization of street users	773
3.1. Recognition	774
3.2. Prioritization	777
3.3. Provision of road space	778
3.4. Provision for people	779
4. Street typology and road hierarchy	780
4.1. Conventional road hierarchy	780
4.2. Contemporary evolution	781
5. Toward the sustainable street	782
6. Conclusions	783
References	785

Chapter 44

Integrated Transport Models for Environmental Assessment	
DAVID A. HENSHER	787
1. Introduction	787

2. Some key building blocks for ILUTMSs and IMSM systems for passenger travel	789
2.1. Policy relevance	789
2.2. Behavioral response relevance	790
2.3. Spatial detail relevance	790
2.4. Decision-maker relevance	791
2.5. Output relevance	792
3. The profile of two ILUTMSs	793
3.1. TRESIS	793
3.2. IRPUD	799
4. Conclusions	803
Acknowledgments	803
References	804

Chapter 45

Transportation Demand Management and “Win-win” Transportation Solutions

TODD A. LITMAN	805
1. What is transportation demand management?	805
2. Consumer impacts of TDM	806
3. TDM evaluation and planning	807
4. Market distortions and reforms	809
5. Win-win transportation solutions	809
6. Examples of win-win solutions	811
6.1. Federal	811
6.2. Regional and local	812
7. Conclusions	814
References	814
