1	Introduction	1
	LARRY L. HENCH, Imperial College London, UK	
1.1	Book and CD module	1
1.2	Aims and objectives	2
1.3	Integrated use of book and CD module	5
1.4	Introduction to the CD	6
1.5	Recommendations for self-study	6
1.6	Overview	7
1.7	Are transplants the solution to spare parts?	8
1.8	Implants and prostheses as spare parts	9
1.9	The limitations of implants	10
 Part I Introduction to materials (living and non-living)		
2	Metals	15
	E. JANE MINAY and ALDO R. BOCCACCINI, Imperial College London, UK	
2.1	Introduction	15
2.2	The metallic bond	15
2.3	Microstructure	16
2.4	Mechanical properties	17
2.5	Fatigue properties	19
2.6	Hardness and wear	19
2.7	Shape memory effect and superelasticity	20
2.8	Corrosion	21
2.9	Effects of processing on structure, properties and reliability	23
2.10	Clinical requirements	24
2.11	Summary	24
2.12	Reading list	24

3	Ceramics	26
	ALDO R. BOCCACCINI, Imperial College London, UK	
3.1	Introduction	26
3.2	Atomic bonds and atomic arrangements in ceramics	27
3.3	Microstructure of ceramics	30
3.4	Mechanical properties of ceramics	30
3.5	Processing of ceramics	33
3.6	Impact of fabrication on microstructure and properties	34
3.7	Clinical requirements	34
3.8	Summary	36
3.9	Reading list	36
4	Polymers	37
	ROBERT G. HILL, Imperial College London, UK	
4.1	Introduction	37
4.2	Polymer configuration and conformation	41
4.3	Tacticity	42
4.4	Glass transition temperature	42
4.5	Polymer processing	42
4.6	Polymer properties	44
4.7	Polymer composites	46
4.8	Summary	46
4.9	Reading list	46
5	Biocomposites	48
	IAN D. THOMPSON, Imperial College London, UK	
5.1	Introduction	48
5.2	Bioactive ceramic polymer composites	50
5.3	Design criteria for biocomposites	53
5.4	Inert ceramic composites	55
5.5	Resorbable polymer matrices	56
5.6	Conclusions	57
5.7	Summary	58
5.8	Reading list	58
6	Cells and tissues	59
	JUNE WILSON HENCH, Imperial College London, UK	
6.1	Introduction	59
6.2	Definitions	59
6.3	Epithelium	62
6.4	Connective tissue	66
6.5	Muscle	67

6.6	Nervous tissue	68
6.7	Summary	70
6.8	Reading list	70
7	Inflammation and wound healing	71
	JUNE WILSON HENCH, Imperial College London, UK	
7.1	Introduction	71
7.2	Definitions	71
7.3	Effects of implantation	72
7.4	Normal wound healing	72
7.5	Wound healing and implants	74
7.6	Implant–tissue interactions	75
7.7	Summary	76
7.8	Reading list	76
Part II	Clinical needs and concepts of repair	
8	The skeletal system	79
	LARRY L. HENCH, Imperial College London, UK	
8.1	Introduction	79
8.2	The structural components of bone	80
8.3	Microstructural features of bone	82
8.4	Biomechanics of bone: anisotropy of bone properties	83
8.5	Effect of age on bone	84
8.6	Effect of strain rate on bone	84
8.7	Fatigue failure of bone	85
8.8	Fracture of bone	85
8.9	Structure of tendons and ligaments	85
8.10	Mechanical behaviour of tendons and ligaments	86
8.11	Cartilage	88
8.12	Summary	89
8.13	Reading list	89
9	The cardiovascular system	90
	M. JOHN LEVER, Imperial College London, UK	
9.1	Introduction	90
9.2	Cardiovascular pathology	91
9.3	Control and treatment of cardiovascular pathologies	94
9.4	Summary	95
9.5	Reading list	96

10	Biomedical polymers	97
	ROBERT G. HILL, Imperial College London, UK	
10.1	Introduction	97
10.2	Bioinert polymers	97
10.3	Bioresorbable polymers	102
10.4	Summary	106
10.5	Reading list	106
11	Biomedical hydrogels	107
	JASON A. BURDICK, University of Pennsylvania, USA and MOLLY M. STEVENS, Imperial College London, UK	
11.1	Introduction	107
11.2	Mechanisms of hydrogel formation	107
11.3	Hydrogel properties	109
11.4	Types of hydrogels	110
11.5	Hydrogels for tissue engineering applications	112
11.6	Summary	115
11.7	Reading list	115
Part III Applications		
12	Repair of skeletal tissues	119
	LARRY L. HENCH, Imperial College London, UK	
12.1	Introduction	119
12.2	Mechanisms and rates of bone repair	119
12.3	Fracture fixation objectives	120
12.4	Orthopaedic metals	122
12.5	Fracture fixation devices	123
12.6	Bioactive materials as bone graft supplements	126
12.7	Summary	127
12.8	Reading list	127
13	Joint replacement	129
	LARRY L. HENCH, Imperial College London, UK	
13.1	Introduction	129
13.2	Hip joint replacement	130
13.3	Failure mechanisms	132
13.4	Survivability of total hip replacements	133
13.5	New developments to improve survivability	135
13.6	Knee joint replacements	136
13.7	Ankle joint replacements	138
13.8	Shoulder joint replacements	138

13.9	Elbow joint replacements	139
13.10	Finger joint replacements	139
13.11	Prosthetic intervertebral disc	139
13.12	Summary	140
13.13	Key definitions	140
13.14	Reading list	140
14	Artificial organs	142
	JULIAN R. JONES, Imperial College London, UK	
14.1	Introduction	142
14.2	Kidney	142
14.3	Heart	143
14.4	Lung	144
14.5	Liver	144
14.6	Pancreas	145
14.7	Skin	146
14.8	The ear	147
14.9	The eye	149
14.10	The nose	150
14.11	The voice box	150
14.12	Summary	151
14.13	Reading list	152
15	Mass transport processes in artificial organs	153
	M. JOHN LEVER, Imperial College London, UK	
15.1	Introduction	153
15.2	Convective transport	153
15.3	Diffusional transport	160
15.4	Interaction of convection and diffusion	164
15.5	Dispersion	165
15.6	Reading list	166
16	Artificial exchange systems	167
	M. JOHN LEVER, Imperial College London, UK	
16.1	Introduction	167
16.2	Blood viscosity	168
16.3	Effects of shear on blood cells	169
16.4	Blood–air interactions	170
16.5	Blood flow in artificial devices	171
16.6	Exchangers	172
16.7	Dialysis	176
16.8	Summary	177

x	Contents	
16.9	Key definitions	177
16.10	Reading list	178
17	Cardiovascular assist systems	179
	M. JOHN LEVER, Imperial College London, UK	
17.1	Introduction	179
17.2	Heart valves	180
17.3	Pumps	183
17.4	Vascular prostheses	187
17.5	Summary	188
17.6	Key definitions	189
17.7	Reading list	190
 Part IV Tissue engineering		
18	Introduction to tissue engineering	193
	LEE D.K. BUTTERY, University of Nottingham, UK and ANNE E. BISHOP, Imperial College London, UK	
18.1	Introduction	193
18.2	The challenge	193
18.3	Cell sources	194
18.4	Culture conditions	196
18.5	Three-dimensional interactions	197
18.6	Cell reprogramming	197
18.7	The way forward	198
18.8	Summary	199
18.9	Key definitions	199
18.10	Reading list	200
19	Scaffolds for tissue engineering	201
	JULIAN R. JONES, Imperial College London, UK	
19.1	Introduction	201
19.2	Classes of potential scaffold materials	201
19.3	The criteria for an ideal scaffold	202
19.4	Polymer scaffolds	204
19.5	Bioactive ceramic scaffolds	207
19.6	Bioactive glass scaffolds	209
19.7	Composites	211
19.8	Control of architecture	212
19.9	Summary	213
19.10	Reading list	213

20	A guide to basic cell culture and applications in biomaterials and tissue engineering	215
	JAMUNA SELVAKUMARAN and GAVIN JELL, Imperial College London, UK	
20.1	Introduction	215
20.2	Sterilisation	217
20.3	Cell culture protocols	221
20.4	Basic techniques for assessment of cell viability	224
20.5	Summary	225
20.6	Reading list	226
21	Immunochemical techniques in tissue engineering and biomaterial science	227
	GAVIN JELL and JAMUNA SELVAKUMARAN, Imperial College London, UK	
21.1	Introduction	227
21.2	Basic immunological principles	228
21.3	Common immunochemical techniques used in biomaterials	230
21.4	Immunochemical applications in biomaterial science and tissue engineering research	238
21.5	Summary	239
21.6	Key definitions	239
21.7	Reading list	239
22	Clinical applications of tissue engineering	241
	LARRY L. HENCH and JULIAN R. JONES, Imperial College London, UK	
22.1	Introduction	241
22.2	Skin	243
22.3	Cartilage	243
22.4	Tendons, ligaments and bone	244
22.5	Pancreas (islets of Langerhans)	244
22.6	Liver	245
22.7	Kidney	245
22.8	The cardiovascular system	246
22.9	Nerves	247
22.10	Summary	247
22.11	Reading list	247

Part V Societal, regulatory and ethical issues

23	Regulatory classification of biomaterials and medical devices	251
	DAVID C. GREENSPAN, US Biomaterials, USA and LARRY L. HENCH, Imperial College London, UK	
23.1	Introduction	251
23.2	How are medical devices regulated?	252
23.3	Classification of medical devices	252
23.4	History of regulatory agencies	253
23.5	What is the CE mark?	255
23.6	Differences between FDA and EU regulations	256
23.7	How do companies get through the FDA process?	257
23.8	Summary	257
23.9	Reading list	257
24	Technology transfer	258
	LARRY L. HENCH, Imperial College London, UK	
24.1	Introduction	258
24.2	Technology transfer paths	258
24.3	Efficient technology transfer	260
24.4	Factors affecting rapid technology transfer	262
24.5	Alternative routes to commercialisation of biomaterials	263
24.6	Summary	263
24.7	Reading list	264
25	Ethical issues	265
	LARRY L. HENCH, Imperial College London, UK	
25.1	Introduction	265
25.2	The ethical problem	266
25.3	Moral uncertainties	267
25.4	General moral principles	269
25.5	Principles of distributive justice	269
25.6	Consequences of the theoretical problem	271
25.7	Sources of conflict	271
25.8	Specific ethical concerns about biomaterials	273
25.9	Summary	274
25.10	Reading list	274
	<i>Index</i>	275
