List of tables	vii
Acknowledgements	xi
1 Household subsistence in the Russian economic crisis	1
2 Secondary employment	10
Definition and data sources	10
Scale of secondary employment	16
Kinds of secondary employment	26
Characteristics of secondary employment	41
The incidence of secondary employment	61
Income from secondary employment	79
Secondary employment as an element of a household survival strategy	85
3 The Russian dacha and the myth of the urban peasant	113
The Russian crisis and the rise of self-sufficiency	113
How extensive is the use of land by urban households in Russia?	114
How much of Russia's food is home-grown?	118
Deciding to use a dacha	125
Testing the hypotheses	131
Why do people use dachas?	144
Dachas and the domestic production of food	150
The dynamics of dacha use	158
The costs and benefits of domestic food production	159
The myth of the urban peasant?	167
Conclusion	176
4 Social networks and private transfers	178
Are gift networks symmetrical?	185
How much do households rely on the help of others?	188
Private transfers: charity or reciprocity?	195
Conclusion	206

5 Do Russian households have survival strategies?	236
The notion of a 'household survival strategy'	237
Do households have <i>survival strategies</i> ?	239
Do <i>households</i> have survival strategies?	247
Do households pursue distinctive survival strategies?	252
The gender dimension of survival strategies	256
Conclusion	266

Index	279

Tables

2.1	Incidence of secondary employment and desire for additional work	18
2.2	Incidence of secondary employment and individual economic activity by employment status	19
2.3	Scale of secondary employment, 1993–97	22
2.4	Percentage engaged in secondary employment by employment status	24
2.5	Branch distribution of secondary employment, 1997–2000 and primary employment, 1999	42
2.6	Percentage of respondents with their second job in the same branch as their first and distribution of first and second jobs by branch	43
2.7	Forms of secondary employment 1994–99	44
2.8	RLMS 1998–2000 distribution of secondary occupations by sphere of occupational activity	45
2.9	Percentage distribution of secondary employment by employers' area of activity	46
2.10a	Incidence of secondary employment by occupational status in primary job (men)	48
2.10b	Incidence of secondary employment by occupational status in primary job (women)	49
2.11	How is your secondary employment formalised?	50
2.12	Type of registration by sector of secondary employment	51
2.13	Distribution of hours worked in the previous month in second job by employment status	52
2.14	When do you normally engage in your secondary employment?	54
2.15	Professional demands of supplementary job	58
2.16	Skill demands of supplementary job	58
2.17	Intensity of supplementary job	59
2.18	Percentage of household income contributed by supplementary earnings, by household income ranking	82
2.19	Percentage of household money income contributed by supplementary earnings, by household income ranking	83

2.20	Percentage of household money income contributed by supplementary earnings, by household income ranking	84
2.21	Who has secondary employment? (couple-based households in which both partners are working)	91
2.22	OLS regressions – dependent variables: log of earnings in main job and log of hourly earnings in second job	97
2.23	OLS regression – dependent variable: log of hours worked last month in supplementary job	99
2.24	Multinomial logistic regression – probability of having permanent, regular or occasional secondary employment; those with a primary job	101
2.25	Multinomial logistic regression – probability of having permanent, regular or occasional secondary employment; those without a primary job	103
2.26	Logistic regression – probability of having a second job and individual economic activity	105
2.27	Multinomial logistic regression – probability of having regular or occasional secondary employment; those with no primary employment	108
2.28	Multinomial logistic regression – probability of having regular or occasional secondary employment; those with primary employment	110
3.1	Percentage of population of urban census districts in each region with each type of plot and median size of plots	115
3.2	Land holding in four large cities	117
3.3	Percentage of urban and rural households using land	117
3.4	Percentage of agricultural production by value by category of producer at current prices	119
3.5	Number of producers, land under cultivation and production of various products on personal plots	120
3.6	Percentage of households buying some or all of their needs and average percentage produced themselves for food products	124
3.7	Logistic regression – dependent variable: probability of having a dacha	133
3.8	Logistic regression – dependent variable: probability of possessing a plot of land (All-Russia, urban population)	135
3.9	Logistic regression – dependent variable: probability of household using land in the last year	137
3.10	Reasons cited for having and for not having a dacha	145

3.11	Mean household income per head by main reasons for having or not having a dacha	148
3.12	Hours worked on the dacha and amount produced by hobbyists and subsistence producers	149
3.13	Methods of provisioning	151
3.14	Logistic regressions – probability of home-production of at least 50 percent of consumption of various products	155
3.15	Expenditure on food of households with and without a dacha	165
3.16	OLS regression – dependent variable: proportion of potatoes in oblast home grown	174
4.1	Private transfers of money and goods	180
4.2	Percentage distribution of help provided to households	182
4.3	Percentage distribution of help provided by households	183
4.4	Characteristics of relatives and friends who are recipients and donors of help.	184
4.5	Number of significant others identified by individual household members who were also in help relationships with the household	185
4.6	Median percentage of household income given and received as gifts and loans by households which are net donors and net recipients, by income quintiles	190
4.7	Percentage of households receiving help and net help received by net beneficiaries	191
4.8	Impact of private transfers on the incidence of poverty	193
4.9	Percentage of total transfers given and received by household income quintiles, 1992–2000	194
4.10	Logistic regression – probabilities of being a recipient, both recipient and donor and being a donor of all forms of help	209
4.11	Logistic regression – probabilities of being a recipient, both recipient and donor and being a donor of money	212
4.12	Logistic regression – probabilities of being a recipient, both recipient and donor and being a donor of food	215
4.13	Logistic regression – probabilities of being a recipient, both recipient and donor and being a donor of goods	218
4.14	Logistic regression – probabilities of being a recipient, both recipient and donor and being a donor of loans	221
4.15	Logistic regression – probabilities of being a recipient, both recipient and donor and being a donor of help	224

4.16	Logistic regression – probabilities of household being a lender, lender and borrower or borrower	227
4.17	OLS regressions – gross value of help and of loans given and received	231
4.18	OLS regressions – value of all forms of help given and received and variable means	234
5.1	Actions taken by respondents in the past twelve months	241
5.2	Actions taken by respondents in the past twelve months	242
5.3	Actions taken by respondents in the past two years	243
5.4	Steps taken by members of households which had experienced financial difficulties in the past two years	244
5.5	What you would do if you had to increase your earnings? (Percentage distribution of responses of those in work)	245
5.6	Assessment of the material situation of the household by household heads	245
5.7	Did you consult with members of your family when you left your last job?	249
5.8	OLS regression – weekly hours worked by high and low earners, couple-based households	250
5.9	OLS regression – monthly hours worked by high and low earners, couple-based households	251
