Preface	ix
1 Introduction	1
1.1 Inventory Examples	1
1.2 Characteristics of Inventory Problems	2
1.2.1 Demand	2
1.2.2 Order	3
1.2.3 Cost	3
1.2.4 Constraints	4
1.2.5 Operating Doctrine	4
1.3 Classification of Inventory Problems	5
1.4 Inventory Systems	9
1.5 Determination of Inventory Cost Parameters	12
1.5.1 Determination of Inventory Shortage Cost	12
1.5.2 Determination of the Operating Doctrine	14
1.6 Types of Decision Problem Situations	15
1.7 Decision Oriented Processes	16
1.8 Discrete Dynamic Programming (DDP)	18
1.8.1 Bellman's Principle of Optimality	20
1.8.2 Functional Equations in Dynamic Programming	20
1.9 Stochastic Multistage Decision Processes	22
1.10 Decision Criteria in Inventory Systems	25
1.11 Balance Between Information and Decision	28
1.12 Unimodality and Strong Unimodality	31
2 Economic Criterion Models	35
2.1 Deterministic Inventory Models	35
2.2 Deterministic Inventory Models With Back logging	38
2.3 Stochastic Inventory Models	39
2.4 Critical Number Policy	40
2.5 Convex Ordering Cost	43

2.6	K -convex Functions	43
2.7	(s, S) Inventory Policy	48
2.8	Quantity Discount	51
2.9	Time Lag in Supply	57
3	Multidimensional Economic Criterion Models	61
3.1	Multicommodity Inventory Systems	61
3.2	Multivariable K -convex Functions	63
3.3	(σ, S) Inventory Policy	66
3.4	Multilocation Inventory Systems	69
3.5	Decomposition of Multidimensional Problem	70
4	Bayesian Solutions of Economic Criterion Models	75
4.1	Bayesian Updating Process	76
4.2	Inventory Models	80
4.3	Optimal Inventory Policy	81
4.4	Conditions of Dimensional Reduction	82
5	Minimax Solutions of Economic Criterion Models	85
5.1	Game Problem with Economic Criterion	86
5.2	Maximizing Distributions	87
5.3	Minimax Solutions	90
5.4	Discussion	93
6	Probability Criterion Models	95
6.1	Basic Model	96
6.2	Time Lag in Supply	98
6.3	Bounded Emergency Order	100
6.4	Nonstationary Inventory Model	104
6.5	Batch Ordering	106
7	Multistage Game with Probability Criterion	111
7.1	Game Model	111
7.2	Minimizing Distributions	112
7.3	Maximin Solutions	120
8	Fuzzy Criterion Decision Processes	125
8.1	Fuzzy Criterion Sets and Fuzzy Criterion Functions	126
8.2	Fuzzy Criterion Models	128
8.3	Basic Theorem	130
8.4	Infinite Horizon Problem	132
8.5	Stability Theorem	138
8.6	Bounded Critical Number Policy	139

8.7	Time Lag in Control	142
8.8	Inventory Control	144
8.9	Reservoir Operations	151
9	Multidimensional Fuzzy Criterion Dynamic Programming	159
9.1	Open Inventory Networks	159
9.2	Multidimensional Fuzzy Criterion Models	162
9.3	Basic Theorem	164
9.4	Existence and Uniqueness Theorem	165
9.5	Stability Theorem	171
9.6	(σ, S) Control Policy	172
9.7	Decomposition of the Multidimensional Problem	174
9.8	Multi-Reservoir Joint Operations	177
10	Further Research and Extensions	181
10.1	Constructing Fuzzy Criterion Functions	183
10.2	Adaptive Fuzzy Criterion Models	185
10.3	Fuzzy Criterion Game Models	186
10.4	Some Computational Issues	187
10.5	Additional Applications	188
Appendix		189
A.1	Compact and Convex Sets	189
A.2	Continuous and Convex Functions	189
A.3	Convergence of Sequence	190
A.4	Borel Functions and Optimization	191
Bibliography		193
Index		207
