Table of Contents

Chapter 1 Introduction 1

Chapter 2 Means and Variances 3

2.1 Mean (Expectation) and Variance of a Random Variable 3
2.2 Covariance and Correlation Coefficient 5
2.3 Mean and Variance of a Sum of Random Variables 6
2.4 Mean and Variance of a Product of Two Random Variables 7
2.5 Mean and Variance of a Quotient of Two Random Variables 7
2.6 Conditional Mean and Variance for Jointly Distributed Random Variables 8
2.7 Conditional Mean of a Constrained Random Variable 9
2.8 Mean and Variance of the Sum of a Random Number of Random Variables 10
2.9 Mean of a Function of a Random Variable 11
2.10 Approximations for the Mean and Variance of a Function of a Random Variable 11
2.11 Mean and Variance of the Maximum of Exponentially Distributed Random Variables 12
2.12 Mean and Variance of the Maximum of Normally Distributed Random Variables 13

Chapter 3 Discrete Probability Distributions 15

3.1 Bernoulli Distribution 15
3.2 Binomial Distribution 16
3.3 Geometric Distribution 18
3.4 Negative Binomial Distribution 20
3.5 Poisson Distribution 23
3.6 Hypergeometric Distribution 24
3.7 Multinomial Distribution 27

Chapter 4 Continuous Probability Distributions 29

4.1 Uniform Distribution 29
4.2 Exponential Distribution 30
4.3 Erlang Distribution 32
4.4 Gamma Distribution 35

4.5 Beta Distribution 38
4.6 Normal Distribution 40
4.6.1 Sum of Normally Distributed Random Variables 41
4.6.2 Standard Normal Distribution 41
4.6.3 Partial Moments for the Normal Distribution 42
4.6.4 Approximations for the Cumulative Normal Distribution Function 43
4.7 Lognormal Distribution 45
4.8 Weibull Distribution 47
4.9 Logistic Distribution 49
4.10 Gumbel (Extreme Value) Distribution 50
4.11 Pareto Distribution 52
4.12 Triangular Distribution 54

Chapter 5 Probability Relationships 57

5.1 Distribution of the Sum of Independent Random Variables 57
5.2 Distribution of the Maximum and Minimum of Random Variables 57
5.2.1 Example for the Uniform Distribution 58
5.2.2 Example for the Exponential Distribution 59
5.3 Change of Variable in a Probability Distribution 60
5.4 Conditional Probability Distribution for a Constrained Random Variable 62
5.5 Combination of Poisson and Gamma Distributions 63
5.6 Bayes' Formula 65
5.7 Central Limit Theorem 65
5.8 Probability Generating Function (z-Transform) 67
5.9 Moment Generating Function 68
5.10 Characteristic Function 70
5.11 Laplace Transform 72

Chapter 6 Stochastic Processes 73

6.1 Poisson Process and Exponential Distribution 73
6.1.1 Properties of the Poisson Process 73
6.1.2 "Lack of Memory" Property of the Exponential Distribution 74
6.1.3 Competing Exponentials 74
6.1.4 Superposition of Independent Poisson Processes 74
6.1.5 Splitting of a Poisson Process 74

6.1.6 Arrivals from a Poisson Process in a Fixed Interval 75
6.2 Renewal Process Results 75
6.2.1 Mean and Variance of Number of Arrivals in a Renewal Process 75
6.2.2 Distribution of First Interval in a Renewal Process 76
6.3 Markov Chain Results 77
6.3.1 Discrete-Time Markov Chains 77
6.3.2 Continuous-Time Markov Chains 77

Chapter 7 Queueing Theory Results 79

7.1 Notation for Queue Types 79
7.2 Definitions of Queueing System Variables 79
7.3 Little's Law and General Queueing System Relationships 80
7.4 Extension of Little's Law 81
7.5 Formulas for Average Queue Length L_q 82
7.6 Formulas for Average Time in Queue W_q 83
7.7 References for Formulas for Average Queue Length and Time in Queue 84
7.8 Pollaczek-Khintchine Formula for Average Time in Queue W_q 85
7.9 Additional Formulas for Average Time in Queue W_q 85
7.10 Heavy Traffic Approximation for Distribution of Time in Queue 86
7.11 Queue Departure Process 87
7.12 Distribution Results for Number of Customers in *M*/*M*/1 Queue 88
7.13 Distribution Results for Time in *M*/*M*/1 Queue 89
7.14 Other Formulas in Queueing Theory 90

Chapter 8 Production Systems Modeling 91

8.1 Definitions and Notation for Workstations 91
8.2 Basic Relationships between Workstation Parameters 91
8.3 Distribution of the Time to Produce a Fixed Lot Size at a Workstation 92
8.4 Throughput of a Serial Production Line with Failures 94
8.5 Throughput of a Two-Station Serial Production Line with Variable Processing Times 95
8.5.1 Two Stations without Buffer 95
8.5.2 Two Stations with Buffer 96
8.6 Throughput of an *N*-Station Serial Production Line with Variable Processing Times 96

Chapter 9 Inventory Control 99

9.1 Economic Order Quantity (EOQ) 99
9.2 Economic Production Quantity (EPQ) 101
9.3 "Newsboy Problem": Optimal Inventory to Meet Uncertain Demand in a Single Period 104
9.4 Inventory Replenishment Policies 106
9.5 (s, Q) Policy: Estimates of Reorder Point (s) and Order Quantity (Q) 108
9.6 (s, S) Policy: Estimates of Reorder Point (s) and Order-Up-To Level (S) 111
9.7 (T, S) Policy: Estimates of Review Period (T) and Order-Up-To Level (S) 113
9.8 (T, s, S) Policy: Estimates of Review Period (T), Reorder Point (s), and Order-Up-To Level (S) 116
9.9 Summary of Results for Inventory Policies 119
9.10 Inventory in a Production/Distribution System 120
9.11 A Note on Cumulative Plots 122

Chapter 10 Distance Formulas for Logistics Analysis 123

10.1 "Traveling Salesman Problem" Tour Distance: Shortest Path through a Set of Points in a Region 123
10.2 Distribution of Distance between Two Random Points in a Circle 124
10.3 Average Rectangular Grid Distance between Two Random Points in a Circle 127
10.4 Great Circle Distance 128

Chapter 11 Linear Programming Formulations 131

11.1 General Formulation 131
11.2 Terminology 132
11.3 Example of Feasible Region 133
11.4 Alternative Formulations 134
11.4.1 Minimization vs. Maximization 134
11.4.2 Equality Constraints 134
11.4.3 Reversed Inequality Constraints 135
11.5 Diet Problem 135
11.6 Duality 136
11.7 Special Cases of Linear Programming Problems 137

11.7.1 Transportation Problem 137
11.7.2 Transshipment Problem 141
11.7.3 Assignment Problem 142
11.8 Integer Linear Programming Formulations 144
11.8.1 Knapsack Problem 144
11.8.2 Traveling Salesman Problem 146
11.9 Solution Methods 147
11.9.1 Simplex Method 147
11.9.2 Interior-Point Methods 148
11.9.3 Network Flow Methods 149
11.9.4 Cutting Planes 149
11.9.5 Branch and Bound 149

Chapter 12 Mathematical Functions 151

12.1 Gamma Function 151
12.2 Beta Function 151
12.3 Unit Impulse Function 152
12.4 Modified Bessel Functions 152
12.5 Stirling's Formula 153

Chapter 13 Calculus Results 155

13.1 Basic Rules for Differentiation 155
13.2 Integration by Parts 157
13.3 Fundamental Theorem of Calculus 157
13.4 Taylor Series 158
13.5 Maclaurin Series 158
13.6 L'Hôpital's Rule 158
13.7 Lagrange Multipliers 159
13.8 Differentiation under the Integral Sign (Leibnitz's Rule) 161
13.9 Change of Variable in an Integral 162
13.10 Change of Variables in a Double Integral 162
13.11 Changing the Order of Integration in a Double Integral 165
13.12 Changing the Order of Summation in a Double Sum 166
13.13 Numerical Integration 167

Chapter 14 Matrices 173
14.1 Rules for Matrix Calculations 173
14.2 Inverses of Matrices 174
14.3 Series of Matrices 175

Chapter 15 Combinatorics 177

Chapter 16 Summations 179
16.1 Finite Sums 179
16.2 Infinite Sums 179

Chapter 17 Interest Formulas 181

References 183
