<i>Preface</i>	i
1. Introduction	1
1.1. Motivation	1
1.2. Scope and Objectives.....	2
1.3. Synopsis	3
PART I: PROJECT SCHEDULING UNDER RENEWABLE RESOURCES	7
2. The Resource-Constrained Project Scheduling Problem	9
2.1. Problem Setting	9
2.2. Model Formulation	11
2.3. Theoretical Analysis	13
2.3.1. Complexity Results	13
2.3.2. Classification Results	18
2.3.3. Connectedness Results	20
2.4. Algorithmic Approaches	23
3. Benchmark Instances and Reference Solutions	27
3.1. Instance Generating Approaches	27
3.2. Literature Review	32
3.3. Instance Sets and Reference Solutions	33
4. Deterministic Construction Methods	35
4.1. Scheduling Schemes	35
4.1.1. Serial Scheduling	36
4.1.2. Parallel Scheduling.....	38

4.2. Priority Rules	40
4.3. Experimental Analysis	42
4.3.1. Experimental Design	42
4.3.2. Effect of Priority Rules	43
5. Randomized Construction Methods	45
5.1. Classical Random Sampling Schemes	45
5.1.1. Pure Random Sampling (RAS)	46
5.1.2. Biased Random Sampling (BRS)	47
5.1.3. Regret-Based Biased Random Sampling (RBRS)	47
5.2. New Random Sampling Schemes	48
5.2.1. Motivation	48
5.2.2. Normalized Biased Random Sampling (NBRS)	51
5.2.3. Modified Regret-Based Biased Random Sampling (MRBRS)	52
5.3. A Note on the Rules MIN LST and MIN SLK	53
5.4. Bounding Rules	54
5.5. Experimental Analysis	56
5.5.1. Experimental Design	56
5.5.2. Effect of Alpha	57
5.5.3. Effect of Priority Rules	60
5.5.4. Effect of Alpha - Revisited	64
5.5.5. Effect of Instance Sets	66
5.5.6. Effect of Scheduling Schemes	67
5.5.7. Effect of Random Sampling Schemes	68
5.5.8. Effect of Bounding	71
5.5.9. Effect of Iterations	73
6. Class-Based Construction Methods	77
6.1. Control Schemes	77
6.2. Experimental Analysis	80
6.2.1. Experimental Design	80
6.2.2. Effect of Instance Characteristics	80

6.2.3. Effect of Sample Size	83
6.2.4. Effect of Instance Size	84
6.3. Algorithmic Design	85
6.4. Effectiveness	87
6.5. Efficiency	88
6.6. Implications for Sampling Methods	89
6.7. Excursus: Case-Based Reasoning	90
6.7.1. Motivation and Concept	90
6.7.2. Applications in Operations Research	90
6.7.3. Implementation	92
6.7.3.1. Case Library Initialization	92
6.7.3.2. Case Selection	93
6.7.3.3. Case Library Updating	93
7. Adaptive Construction Methods	95
7.1. Motivation and Concept	95
7.2. Parameterized Composite Priority Rules	96
7.3. Algorithmic Design	98
7.3.1. Randomized Cooling-Based Control	98
7.3.2. Local Search-Based Control	102
7.3.3. Randomized Local Search-Based Control	105
7.4. Experimental Analysis	105
7.4.1. Experimental Design	105
7.4.2. Randomized Cooling-Based Control	107
7.4.2.1. Effect of Gamma	107
7.4.2.2. Effect of Rule Set Cardinality and Composition	109
7.4.2.3. Effect of Beta	110
7.4.2.4. Efficiency	111
7.4.3. Local Search-Based Control	111
7.4.3.1. Effect of Sigma	111
7.4.3.2. Effect of Rule Set Cardinality and Composition	113
7.4.3.3. Efficiency	113

7.4.4. Randomized Local Search-Based Control	114
7.4.4.1. Effect of Sigma.....	114
7.4.4.2. Effect of Rule Set Cardinality and Composition.....	115
7.4.4.3. Efficiency.....	115
8. Comparison of Algorithms	117
PART II: PROJECT SCHEDULING UNDER PARTIALLY RENEWABLE RESOURCES.....	121
9. The Partially Renewable Resource-Constrained Project Scheduling Problem	123
9.1. Partially Renewable Resources	123
9.1.1. Motivation and Concept.....	123
9.1.2. Relation to Other Resource Concepts.....	126
9.1.2.1. Nonrenewable Resources	126
9.1.2.2. Renewable Resources	127
9.1.2.3. Renewable Resources with Time-Varying Capacities ..	127
9.1.2.4. Partially Renewable Resources of Icmeli Tukul, Rom.	128
9.2. Problem Setting	128
9.3. Model Formulations.....	130
9.3.1. Simple Model.....	130
9.3.2. Refined Model	131
9.3.3. Normalized Model	132
9.3.4. Assessment	133
9.4. Modelling Capabilities.....	135
9.4.1. Interpreting Logical Relations	135
9.4.2. Modelling Logical Relations.....	136
9.4.3. Modelling Practical Requirements.....	138
9.4.4. Assessment	141
9.5. Theoretical Analysis	142
9.5.1. Special Properties	142
9.5.2. Complexity Results	145

9.5.3. Classification Results	148
9.5.4. Connectedness Results	149
9.6. Algorithmic Approaches	150
10. Benchmark Instances and Reference Solutions.....	155
10.1. Literature Review	155
10.2. Instance Generating	155
10.2.1. Project Data	156
10.2.2. Precedence Relations	157
10.2.3. Period Subsets.....	159
10.2.4. Resource Demand	162
10.2.5. Resource Capacities	163
10.3. Issues of Instance Feasibility	163
10.3.1. Infeasible Instance Clusters	164
10.3.2. Promising Instance Clusters.....	167
10.4. Instance Sets and Reference Solutions	167
11. Deterministic Construction Methods	169
11.1. Scheduling Scheme	169
11.2. Priority Rules	172
11.3. Experimental Analysis	176
11.3.1. Experimental Design	176
11.3.2. Effect of Priority Rules.....	178
12. Randomized Construction Methods.....	181
12.1. Bounding Rules.....	181
12.2. Experimental Analysis	183
12.2.1. Experimental Design	183
12.2.2. Effect of Priority Rules.....	183
12.2.3. Effect of Alpha.....	187
12.2.4. Effect of Bounding	189
12.2.5. Effectiveness	190

13. Class-Based Construction Methods	193
13.1. Experimental Analysis	193
13.1.1. Experimental Design	193
13.1.2. Effect of Instance Characteristics	193
13.1.3. Effect of Sample Size	195
13.1.4. Effect of Instance Size.....	196
13.2. Algorithmic Design	196
13.3. Effectiveness.....	197
14. Adaptive Construction Methods	199
14.1. Algorithmic Design	199
14.2. Experimental Analysis	199
14.2.1. Experimental Design	199
14.2.2. Local Search-Based Control.....	201
14.2.2.1. Effect of Sigma.....	201
14.2.2.2. Effect of Rule Set Cardinality and Composition.....	203
14.2.2.3. Efficiency	206
14.2.3. Randomized Local Search-Based Control.....	206
14.2.3.1. Effect of Sigma.....	206
14.2.3.2. Effect of Rule Set Cardinality and Composition.....	207
14.2.3.3. Efficiency	210
15. Iterative Improvement Methods	211
15.1. Algorithmic Design	212
15.1.1. Local Left-Shifting	212
15.1.2. Global Left-Shifting	219
15.1.3. Hybrid Left-Shifting	221
15.1.4. Some Roads Not Travelled.....	225
15.2. Experimental Analysis	226
15.2.1. Experimental Design	226
15.2.2. Effectiveness	227
15.2.3. Efficiency.....	229

16. Tabu Search Methods.....	231
16.1. Solution Encoding.....	232
16.2. Neighborhood.....	233
16.3. Tabu Status.....	235
16.4. Move Selection.....	237
16.5. Initial Solution	237
16.6. Diversification	238
16.7. Some Roads Not Travelled	240
16.8. Experimental Analysis	241
16.8.1. Experimental Design	241
16.8.2. Effect of Neighborhood Parameters.....	241
16.8.3. Effect of Tabu Tenure	243
16.8.4. Effect of Penalty Weight	243
16.8.5. Effect of Initial Solutions.....	244
16.8.6. Effect of Diversification	245
16.9. Algorithmic Design.....	246
16.10. Effectiveness.....	247
17. Comparison of Algorithms	249
PART III: APPLICATIONS.....	255
18. A Case Study from Lufthansa Technical Training	257
18.1. Problem Setting.....	258
18.2. Operational Instance	262
18.3. Algorithmic Design.....	262
18.4. Computational Results	263
18.5. The Decision Support System	264
18.6. Conclusions and Outlook	267
19. A Case Study from Lufthansa Flight Training	269
19.1. Problem Setting.....	270
19.2. Operational Instance	274

19.3. Algorithmic Design	274
19.4. Computational Results	276
19.5. Conclusions and Outlook	277
20. Summary and Conclusions	279
<i>Notation</i>	283
<i>References</i>	285
