## PART I THREE CONCEPTIONS OF THE NEW ECONOMY

1 What is the New Economy?	3
2 The US resurgence	7
3 Regional wellsprings	15
4 New politics (as usual)	21
5 New firm?	31
6 Digital Millennium	37

## PART II REQUIEM

7 Only yesterday: the industrial-policy debate	47
8 The law of industrial growth	53
9 Maturity and stagnation	65
10 Eurolandia	81
11 New-wave industrialization	99
12 End game: downsizing defense	111
13 Destroying the old order	127

## PART III THE REVOLUTION

14 The coming Japanese conquest	153
15 The rise of the Wild-West companies	157
16 Sea change	167
17 The US comeback, 1989-1994	175
18 The Internet decade	183
19 Postscript: State IT roles	195

## PART IV NETWORKS

20 Clusters: a primer	231
21 Venture capitalism	239
22 IPOs and Internet business models	251
23 Strategic cities	261

## PART V WHAT WENT RIGHT?

24 Schumpeter's questions, revisited	291
25 Parables of productivity	301
<i>Bibliography</i>	317
<i>Name index</i>	333
<i>Subject index</i>	337

# Figures

---

1.1	Breaking the speed limit in the 1990s	5
2.1	US industrial growth leads Japan and Europe, 1980-1997	9
2.2	Employment growth by country, 1980-1996	13
3.1	The nine division and the Manufacturing Belt	16
3.2	Manufacturing employment tilts South and West	18
3.3	Seventeen million new jobs, by region, 1990-1998	19
4.1	Home states of all elected presidents since 1964	22
4A.1	Components of divisional population change, 1990-1998	29
5.1	Business profits by sector, 1994	34
8.1	The law of industrial growth	54
8.2	Variations in the 'law' of industrial growth	58
8.3	Production and trade over the product cycle	61
8.4	Trend growth rates of manufacturing exports by group	63
9.1	A Gompertz curve of growth applied to development	68
9.2	Clustering of 'right-to-work' states in the South and West	72
9A.1	Reindustrialization of the Upper Midwest in the 1990s	79
9A.2	Non-metropolitan industrialization shapes two younger divisions	80
10.1	European Monetary Union (EMU) – the Euro Zone	82
10.2	Correlation of taxes and unemployment in the G-7 economies	83
10.3	Europe's big four lost seven million manufacturing jobs	88
10.4	Taxes as a share of GDP range highest on the continent	94
11.1	1.9 million jobs added by job-gaining sectors	99
11.2	1.9 million jobs lost in declining sectors, 1970-1990	100
11.3	US manufacturing employment held steady, 1970-1990	102
11.4	Manufacturing output doubled, 1970-1990	103
11.5	Deindustrialization? Half the states added manufacturing jobs	105
11.6	Manufacturing Belt: 1970-1990 job changes (000) in manufacturing sectors that added jobs nationwide	106
11.7	Manufacturing Belt: 1970-1990 job changes (000) in manufacturing sectors that lost jobs nationwide	106
11.8	The South and West: 1970-1990 job changes (000) in manufacturing sectors that gained jobs nationwide	108
11.9	The South and West: 1970-1990 job changes (000) in manufacturing that lost jobs nationwide	108
11.10	South and West gains in US job-adding sectors	109
12.1	Defense cutbacks and state job growth in the 1990s	113
12.2	The product-portfolio approach to strategic planning	114
12.3	Channels of structural adaptation	116
12.4	Conversion: from aerospace to entertainment employment	124
15.1	US computing's westward evolution	158

16.1	Grove's transformation curve for Intel in 1985	171
16.2	Grove on how IT firms compete	172
17.1	The US resurgence in global market shares for chips	176
17.2	Global PC market shares in 1999	178
19.1	US job counts in three core IT components, 1986 and 1996	195
19.2	Changes in total IT shares by state, 1986-1996	197
19.3	Swing states in the IT realignment, 1986-1996	199
19.4	US computer manufacturing employment, 1958-1998	200
19.5	Electronics (including semiconductor) employment, 1972-1998	204
19.6	Changes in electronics employment by state, 1986-1996	206
19.7	Computer services employment in the US, 1988-1998	208
19.8	Percent change in computer services jobs, 1986-1996	211
19.9	Software location quotients in 1996	212
19.10	State IT location quotients in 1996	215
19.11	Hardware and software specialists in 1996	217
20.1	Job growth in Route 128 and Silicon Valley, 1975-1996	235
20.2	Similarity of job growth in the two clusters	236
21.1	Venture capital funding soars, 1995-2000	240
21.2	The capital-gap hypothesis	241
21.3	Valley of death	243
21.4	Destinations of VC placements, Quarter 2 of 2000	245
23.1	The regional clustering of the old cities	266
23.2	Brisk late 1990s job growth in older areas still lags . . .	268
23.3	. . . The faster expansion of younger areas	269
23.4	The ten metro areas with largest net domestic in-migration	273
23.5	Patent growth in the ten states with the most patents	283
23.6	Strategic cities: 12 large North American centers	285
24.1	US per capita GDP, 1900-1990, in constant (1995) dollars	291
24.2	Living standards doubled in the 40 years, 1959-1999	293
25.1	Productivity surged and black poverty fell 10 points	302
25.2A	Moore's Law and Gilder's Law: 1970-1999	308
25.2B	The falling costs of data storage and transmission, 1970-1999	308
25.3	Contributions to output growth, 1974-1999	310
25.4	Contributions to labor productivity growth, 1974-1999	311
25.5	Dissecting the one-point gain in labor productivity	313

# Tables

---

3.1	Regional maturity and business climates	17
5.1	<i>Forbes Magazine's</i> estimates for the 15 richest Americans	31
6.1	Long waves of creative destruction	41
9.1	The halt in Britain's total factor productivity growth	66
9.2	Britain's decline in relative per capita output, 1950-1981	67
9.3	South and West metros grew fastest, 1990-1998	74-5
10.1	The competitiveness of the 'Anglophones,' 1999	85
12.1	US defense firms led the global list in 1995	118
13.1	Replacement of vacuum tube leaders by semiconductor firms	128
13.2	Top ten semiconductor firms in 1982 and 1999	129
13.3	Chandler's stages of US industrial evolution	132
13.4	Major innovations, 1900-1969	134-5
13.5	Major innovations, 1971-1998	138
14.1	Reversal of fortunes: US computer giants, 1987-1997	154
15.1	Major IT innovations, 1971-1995	160
18.1	Changes in regional advantage over the life cycles of mainframe, mini, PC and internet-enabled systems	183
18.2	<i>PC Magazine's</i> 100 most influential PC companies	186-7
18.3	Competitor scores on Porter's diamond in IT	190
18.4	An avant-garde list of the 100 top IT firms	191-3
19.1	US employment changes in three IT components, 1986-1996	196
19.2	Computer location quotients: changes and 1996 values	202
19.3	Software and total IT location quotients in 1996	213-4
19.4	Top 25 states: location quotients versus the PPI index	219
19A.1	Explaining changes in computer employment by state	224-5
19A.2	Determinants of electronics location quotients in 1996	226-7
22.1	Ritter list of IPOs that doubled in price the first day	252
22.2	IPOs from 2000 with largest rates of return, by product line	255
22.3	Cohan's hierarchy of Internet profitability	256
23.1	1950 employment structure and post-1970 industrial growth	265
23.2	In hardware, specialized areas lost most	270
23.3	In software, specialized areas gained most	275
23.4	Areas with the most active VC base in 1997	276
23.5	Areas ranked by digital IPOs per million residents	278
23.6	The determinants of IPO formation rates, 1996-99	280
24.1	IT giants among the world's 20 largest public companies	298
24.2	Getting it right: policies for market-based growth	300
