Preface.....	vii
Acknowledgments	xi

1 The Irreversibility of Injury	1
--	----------

1.1	Repair versus Regeneration	1
1.2	Tissues and Organs	1
1.3	Spontaneous and Induced Regeneration	2
1.4	Diversity of Spontaneously Regenerative Phenomena	3
1.5	Anatomical and Phylogenetic Focus of Regeneration	5
1.6	Wounds, Lesions, and Defects	6
1.7	All Organs Can Be Irreversibly Injured	6
1.8	Critical Size of Defect versus Nature of Injured Tissue	9
1.9	A Universal End Product of Repair Processes in All Organs?	13
1.10	Theoretical Views of Adult Failure to Regenerate	15
1.11	The Missing Organ and How to Replace It	18
1.11.1	Transplantation	19
1.11.2	Autografting	20
1.11.3	Permanent Prosthesis	20
1.11.4	Stem Cells	21
1.11.5	In Vitro Synthesis	21
1.11.6	Induced Organ Regeneration	22
1.12	Synthesis of Tissues and Organs	23
1.13	Summary	25

2	Nonregenerative Tissues	26
2.1	The Experimental Volume: In Vitro or In Vivo?	26
2.2	Critical Presence of Exudate Inside the Defect	27
2.3	Certain Tissues in an Organ Regenerate	
	Spontaneously	28
2.3.1	Epitheliocentric Viewpoint	29
2.3.2	Axonocentric Viewpoint	31
2.3.3	Spontaneously Regenerative Tissues	35
2.4	Other Tissues Are Nonregenerative	36
2.4.1	The Dermis Is Nonregenerative	36
2.4.2	The Endoneurial Stroma Is Nonregenerative	37
2.4.3	Evidence for and Against Regeneration of Other Nonneuronal Tissues	39
2.4.4	The Supporting Tissue (Stroma) of Several Organs Is Nonregenerative	41
2.5	Are Basement Membranes Regenerative?	43
2.6	Regenerative Similarity of Tissues in Different Organs	44
2.7	The Tissue Triad	46
2.8	Summary	49
3	Anatomically Well-Defined Defects	51
3.1	Spatial Parameters of an Experiment in Induced Regeneration	51
3.2	Generation of the Experimental Volume	52
3.3	Deletion of Nonregenerative Tissues	53
3.4	Anatomical Boundaries	54
3.5	Magnitude of Experimental Volume	57
3.6	Physical Containment	59
3.7	The Anatomically Well-Defined Defect	60
3.8	Widely Used Animal Models	60
3.9	Summary	62
4	The Defect Closure Rule	63
4.1	Measuring the Outcome of a Regenerative Process	63
4.2	Mechanism of Healing versus Total Resulting Change	64

4.3	Initial and Final States of a Healing Process	65
4.4	Configuration of the Final State	69
4.5	Three Modes of Defect Closure in Organs	70
4.5.1	Closure of Defects in Organs by Contraction	70
4.5.2	Measurement of Contraction in Skin and Nerve Defects	76
4.5.3	Closure by Epithelialized Scar (Skin) and by Neuroma (Nerve)	77
4.5.4	Closure by Regeneration	82
4.6	Defect Closure Rule	82
4.7	Relative Importance of the Three Modes of Defect Closure in Different Species	84
4.8	A Transition in Healing Behavior with Development	88
4.9	Summary	91

5 Regeneration of Skin 93

5.1	Parameters for Study of Healing Skin Defects	93
5.1.1	Anatomically Well-Defined Skin Defects	94
5.1.2	Timescale of Observations	94
5.1.3	Assays of Configuration of the Final State	95
5.2	Synthesis of an Epidermis and a Basement Membrane	95
5.2.1	Morphology and Function of the Epidermis	96
5.2.2	Synthesis of an Epidermis In Vitro	96
5.2.3	Structure of Basement Membranes	99
5.2.4	Synthesis of a Skin Basement Membrane	101
5.2.5	Origins of Mechanical Failure of the Dermo-Epidermal Junction	105
5.2.6	Synthetic Potential and Limitations of Keratinocyte Sheet Grafts	109
5.3	Synthesis of the Dermis	110
5.3.1	Structure and Function of the Dermis	110
5.3.2	Sequential In Vivo Synthesis of a Dermis and an Epidermis	111
5.3.3	Synthetic Potential and Limitations of the Cell-Free Dermis Regeneration Template	115
5.4	Partial Synthesis of Skin	115
5.4.1	Structure and Function of Skin	115

5.4.2	Simultaneous Synthesis of a Dermis and an Epidermis	116
5.4.3	Distinction Between In Vitro and In Vivo Synthesis	122
5.4.4	In Vitro to In Vivo Synthetic Routes	123
5.4.5	Evidence for Synthesis of a Partly Complete Skin Organ	127
5.5	Summary of Protocols	129
5.6	Simplest Conditions for Synthesis	132
5.7	Relative Regenerative Activity of Growth Factors, Cells, and Scaffolds	133
5.8	Summary	137
6	Regeneration of a Peripheral Nerve	138
6.1	Parameters for Study of Peripheral Nerve Regeneration	138
6.1.1	Anatomically Well-Defined Defects in Peripheral Nerves	139
6.1.2	Timescale of Observations: Short-Term and Long-Term Assays	139
6.1.3	Short-Term Quantitative Assays (< 20 wk): Frequency of Reinnervation	142
6.1.4	Correction for Differences in Gap Length and Animal Species: Critical Axon Elongation	143
6.1.5	Relation Between Critical Axon Elongation Data and the Defect Closure Rule	146
6.1.6	Long-Term Assays (>20 wk): Fidelity of Regeneration	149
6.1.7	Summary Description of Assays	149
6.2	Synthesis of Myelinated Nerve Fibers	151
6.2.1	Structure of Myelinated and Nonmyelinated Axons and of the Endoneurium	152
6.2.2	Synthetic Pathways to Myelinated Axons and Basement Membrane	155
6.2.3	Observations Related to Synthesis of an Endoneurial Stroma	157
6.3	Synthesis of a Perineurium; the Epineurium	159
6.3.1	Structure and Function of the Perineurium	159
6.3.2	The Epineurium	161

6.3.3	In Vitro and In Vivo Studies of Synthesis of a Perineurium	162
6.4	Synthesis of a Nerve Trunk	164
6.4.1	Exogenous Supply of Soluble Regulators	164
6.4.2	Schwann Cell Addition to the Tubulated Gap	167
6.4.3	Filled and Unfilled Silicone Tubes	168
6.4.4	Biodurable Tubes Other than Silicone Tubes	172
6.4.5	Degradable Synthetic Polymeric Tubes	172
6.4.6	Degradable Tubes Based on Natural Polymers	175
6.4.7	Semipermeable Tubes	179
6.4.8	Long-Term Evidence for Synthesis of a Conducting Nerve Trunk	181
6.5	Regenerative Activity for Various Tubulated Configurations	183
6.6	Summary	184

7 Irreducible Processes for Synthesis of Skin and Peripheral Nerves 186

7.1	Reaction Diagrams	186
7.1.1	Reactants and Products; Irreducible Processes	187
7.1.2	Approximations Underlying the Use of Reaction Diagrams	188
7.1.3	Tabulation of Reaction Diagrams	193
7.2	Irreducible Reaction Diagrams for Synthesis of Skin	201
7.3	In Vitro versus In Vivo Conditions	205
7.4	Conditions for Synthesis of Peripheral Nerves	208
7.5	A Fresh Look at the Tissue Triad	211
7.6	Toward Simple Protocols for Synthesis of the Entire Organ	214
7.7	Summary	216

8 The Antagonistic Relation Between Contraction and Regeneration 219

8.1	Contraction and Scar Formation Versus Induced Regeneration	219
-----	--	-----

8.1.1	Reduction in Extent of Contraction in the Final State Coincided with Induced Regeneration	220
8.1.2	Delay in Closure by Contraction in Regenerating and Nonregenerating Defects	225
8.1.3	Spontaneously Healing Defects: Relation Between Contraction and Regeneration	227
8.1.4	Scar Synthesis Was Abolished When Contraction Was Inhibited	229
8.1.5	Suppression of Contraction Did Not Suffice to Induce Regeneration	229
8.1.6	Summary of Data; a Theory Relating Inhibition of Contraction and Induction of Regeneration	233
8.2	Nondiffusible Regulators as Probes of Contraction	234
8.2.1	Diffusible and Nondiffusible Regulators	234
8.2.2	Nondiffusible Regulators Are Insoluble Macromolecular Solids	234
8.2.3	Homologous Series of ECM Analogs as Probes of Induced Regeneration	235
8.2.4	Biological Activity of Certain ECM Analogs	236
8.2.5	Strong Dependence of Contraction-Delaying Activity on Structure of ECM Analogs	239
8.3	Summary	242

9 Kinetics and Mechanism I: Spontaneous Healing 244

9.1	Mechanism versus Final State of Spontaneous Healing	244
9.2	Cell Phenotypes Exhibited During Spontaneous Healing	244
9.3	Go-Stop Signals for Skin Defect Closure in Adults	247
9.3.1	Injury to the Dermis: A Signal for Generation of the Cytokine Field	247
9.3.2	Synthesis of a Provisional Matrix and of Granulation Tissue	249
9.3.3	Identity of Contractile Cells	250
9.3.4	Generation of Local Stress by an Individual Contractile Cell	253

9.3.5	Mechanisms of Closure by Contraction	254
9.3.6	Directional Closure of Defects; Translation of Perilesional Dermis	258
9.3.7	Synthesis of Scar	259
9.3.8	Mechanism of Contraction Arrest	260
9.3.9	Summary of Mechanisms for Initiation, Propagation, and Termination of Skin Defect Contraction	266
9.4	Skin Defect Closure in Fetal Models	267
9.5	Spontaneously Healing Defects in Peripheral Nerves	269
9.5.1	Signal for Irreversible Healing Response of a Peripheral Nerve	270
9.5.2	Proximal Stump; Traumatic Degeneration of the Myelin Sheath	271
9.5.3	Sprouting of Axons from the Proximal Stump; Minifasciculation	272
9.5.4	Long-Term Degenerative Processes in the Distal Stump	272
9.5.5	Fibrosis and Angiogenesis in the Stump	273
9.5.6	Presence of Myofibroblasts in Peripheral Nerve Stumps	273
9.5.7	Mechanism of Closure of Nerve Stump	274
9.5.8	Healing of the Nerve Defect in the Fetal Model	275
9.6	Summary	276

10 Kinetics and Mechanism II: Induced Regeneration 278

10.1	Induced Regeneration versus Spontaneous Healing	278
10.2	Kinetics of Skin Regeneration	278
10.2.1	Kinetics of Synthesis of the Epidermis and Basement Membrane	279
10.2.2	Synthesis of Rete Ridges and the Dermis	282
10.2.3	Synchronization Between the Processes for Synthesis of Epithelia and Stroma	284
10.3	Mechanism of Synthesis of the Dermis	284
10.3.1	Depletion of Cells, Including Contractile Cells, in the Defect	285

10.3.2	Delay in Onset of Contraction	286
10.3.3	Delay in Contraction Half-Life	290
10.3.4	Persistence of the Regulator in a Nondiffusible State	294
10.3.5	Mechanism for Contraction Arrest	296
10.3.6	Blocking of Scar Synthesis. Synthesis of the Dermis	298
10.3.7	Summary: Mechanism of Induced Regeneration of the Dermis	298
10.4	Kinetics of Synthesis of Peripheral Nerves	299
10.4.1	Synthesis of Regenerative Tissues: Nerve Fibers	300
10.4.2	Evidence for Synthesis of an Endoneurium and a Perineurium	303
10.5	Mechanism of Peripheral Nerve Regeneration	305
10.5.1	Length and Diameter of Regenerated Nerve Trunk	305
10.5.2	Contractile Cell Capsule Around Stumps and Regenerated Nerve Trunk	306
10.5.3	The Pressure Cuff Hypothesis	310
10.5.4	Dependence of L_c on Macroscopic Experimental Configurations	311
10.5.5	Hypothetical Synthesis of Basement Membrane Microtubes	314
10.5.6	Substrate Preferences of Schwann Cells and Elongating Axons	316
10.5.7	Mechanistic Considerations for Synthesis of Nonregenerative Tissues in Nerves	318
10.5.8	Summary of Mechanisms for Nerve Regeneration	319
10.6	Similarities and Differences of Induced Regeneration in Skin and Nerves	320

Appendix	Method of Estimation of Critical Axon Elongation of an Arbitrary Tubulated Device Bridging Two Nerve Stumps	322
