Examining Convergence of Barrier Options	73
3.1 Introduction	73
3.2 Convergence Analysis of the CRR European Down-and-out Call Option Approximation	74
3.2.1 Introduction to Barrier Option Pricing	74
3.2.2 Passage to the Limit	77
3.2.3 Convergence Speed Analysis	81
3.3 Convergence Analysis of a Modified Binomial Approach	90
3.3.1 Definition of the Method	90
3.3.2 Passage to the Limit	94
3.3.3 Convergence Speed Analysis	98
3.4 Convergence Analysis of a Modified Trinomial Approach	101
3.4.1 Definition of the Method	101
3.4.2 Passage to the Limit	103
3.4.3 Convergence Speed Analysis	107
3.5 Flexible Binomial Trees: A New Methodology for Option Price Approximation	113
3.5.1 A New Interpretation of the Binomial Asset Price Grid	113
3.5.2 A Lattice-based Backward Induction Method	118
3.5.3 Specific Extensions	120
3.5.4 Simulations	122
4 Binomial Option Pricing with Time- and State-dependent Volatility	127
4.1 Introduction	127
4.2 Binomial Models with Time- and State-dependent Volatility Functions	129
4.2.1 The Model in the Continuous-time Setup	129
4.2.2 The Model in the Discrete-time Setup	130
4.2.3 The Model of Derman and Kani	134
4.2.4 Some Modifications to the Model of Derman and Kani	137
4.3 Proving Convergence and Stability of the Binomial Asset Price Process	140
4.3.1 Convergence Proof Part One	140
4.3.2 Convergence Proof Part Two: An Additional Assumption	144
4.4 Simulation Results	146
4.4.1 Discussion of the Simulation Results	146
4.4.2 Listing of the Simulation Results	151
