

CONTENTS

INTRODUCTION Michael Masuch	
ARTIFICIAL INTELLIGENCE IN ORGANIZATION AND MANAGEMENT THEORY	1
1. Method-driven scientific progress	1
2. Some important AI concepts	2
4. AI for organization theory	15
CHAPTER 1 Thomas W. Malone	
ANALOGIES BETWEEN HUMAN OR- GANIZATIONS AND ARTIFICIAL INTELLIGENCE SYSTEMS: TWO EXAMPLES AND SOME REFLECTIONS	21
1. Introduction	21
2. A first example: intelligent information routing	22
2.1 Theories about lateral information flows in organizations	23
2.2 The blackboard architecture in AI systems	23
2.3 An organizational blackboard for adhocracies	25
2.4 The Information Lens – An intelligent information sharing system	26
2.5 Lessons from this example	29
3. A second example: tradeoffs in task assignment structures	30
3.1 Distributed computer systems	30
3.2 Analysis of tradeoffs in alternative coordination structures	33
3.3 Application to predicting effects of information technology on organizational structures	34
3.4 Lessons from this example	36
4. Reflections: what is coordination?	36
4.1 Defining coordination	37
4.2 Processes underlying coordination	38
4.3 Where do our examples fit?	39
4.4 Conclusions	40
CHAPTER 2 Henk W. M. Gazendam	
ORGANIZATION THEORIES AS GRAMMAR.....	41
1. Grammars, theories, and symbol systems	41
1.1 Theory component	41
1.2 Metalevel reasoning	43
1.3 Characteristics of symbol systems	44
1.4 Modeling organizations as symbol systems	45
2. The use of formal grammars	46
3. An organization grammar	47
3.1 An example grammar	49

3.2 Organization grammar specification	52
3.3 Basic category choice	52
3.4 An example: organization grammar	53
4. Grammar-based problem solvers	56
4.1 Connections between grammars	56
4.2 The necessity of multi-grammar problem solving	57
4.3 Multi-agent, multi-heuristic problem solving, and pluralism	58
4.4 The implementation of a pluralistic problem solver	60
Appendix: Notation schema	62

CHAPTER 3 Robert W. Blanning

KNOWLEDGE, METAKNOWLEDGE, AND EXPLANATION IN INTELLIGENT ORGANIZATIONAL MODELS.....	65
1. Introduction	65
2. The organizational intelligence paradigm	67
3. Human organizations as physical symbol systems	68
3.1 Organizational knowledge	69
3.2 Organizational metaknowledge and organizational heuristics	74
3.3 Metaknowledge and environment	77
4. Explanation of organizational decision processes	80
5. Conclusion: can organizations think?	82
Appendix	83

CHAPTER 4 Kathleen Carley, Johan Kjaer-Hansen, Allen Newell, Michael Prietula

PLURAL-SOAR: A PROLEGOMENON TO ARTIFICIAL AGENTS AND ORGANIZATIONAL BEHAVIOR	87
1. Introduction	87
1.1 Plural-Soar: a prolegomenon to artificial agents and organizational behavior	88
2. Organizational theory and computer simulations	91
2. The Soar architecture	94
3. Plural-Soar	97
3.1 Warehouse Task	97
3.2 Plural-Soar agents	100
3.3 Coordination scheme	105
3.4 Measuring performance and simulations	106
4. Results	107
5. Discussion	113
6. Conclusion	116

CHAPTER 5 Jonathan Bendor, Terry M. Moe

BUREAUCRACY AND SUBGOVERNMENTS - A SIMULATION MODEL.....	119
1. Introduction	119
2. The model	126

3. Simulation results: bureaucratic goals	129
3.1 Bureaucratic goals and institutional structure	130
3.2 Simulation results: imperfect learning	132
3.3 Learning and institutional structure	134
4. Concluding remarks	135
Appendix: The simulation runs	138

CHAPTER 6 Serge Taylor

A CLASSIFIER MODEL OF THE EVOLUTION OF ORGANIZATIONAL STRUCTURE: THE EVOLVING LEGISLATURE.....	143
1. Introduction	143
1.1 Organizational dynamics from adaptive learners	143
2. Modeling the evolution of beliefs	146
2.1 From "good notions" to "better ideas"	148
3. Modeling the evolution of legislative structure	150
4. What experiments with the evolving legislature might tell us ..	156
5. Conclusions	167
Appendix	170

CHAPTER 7 Michael D. Cohen

WHEN CAN TWO HEADS LEARN BETTER THAN ONE? RESULTS FROM A COMPUTER MODEL OF ORGANIZATIONAL LEARNING ..	175
1. Introduction	175
1.1 Learning through features	176
2. The task setting	177
2.1 The learning model to be studied	178
2.2 Simulation results	180
3. Analysis of performance patterns	182
3.1 Assessing the generality of the two forces	186
Appendix: Summary of model cycle	188

CHAPTER 8 Massimo Warglien

EXIT, VOICE, AND LEARNING: ADAPTIVE BEHAVIOR AND COMPETITION IN A HOTELLING WORLD	189
1. Introduction	189
2. Life in a Hotelling world	190
3. An adaptive model of exit, voice, and competition in a Hotelling world	194
4. Reasons of the heart and reasons of interest	201
5. Adaptation within a multidimensional feature space	205
6. Intraorganizational competition and the emergence of policy cycles	210
7. Concluding remarks	212

CHAPTER 9 Kevin Crowston

MODELING COORDINATION IN ORGANIZATIONS.....	215
1. Introduction	215
1.1 An example: computer software company	216

2. Data-flow models	219
2.1 Data collection	220
2.2 Example	222
3. Intentional models	225
3.1 Representing knowledge about actions	226
3.2 An example	227
3.3 Uses of models	229
3.4 Designing computer-support systems	229
3.5 New organizational designs	230
4. Coordination and organization theory	231
4.1 Alternative coordination strategies	232
5. Conclusion	234

CHAPTER 10 Bernardo A. Huberman

THE VALUE OF COOPERATION	235
1. Distributed intelligence	235
2. Cooperative problem solving	237
3. Combinatorial implosions	241

CHAPTER 11 Helmy H. Baligh, Richard M. Burton, Børge Obel

ORGANIZATIONAL CONSULTANT: LEARNING BY DOING	245
1. Introduction	245
1.1 An expert system for the contingency theory of organization	246
2. Microlink International	250
2.1 History and product	250
2.2 Microlink International: structure and markets	251
3. Input to <i>Organizational Consultant</i>	254
4. Analysis by the <i>Organizational Consultant</i>	271
4.1 The <i>Organizational Consultant's</i> recommendations and sensitivity analysis	272
4.2 Implications for Microlink International	272
4.3 What can we learn by doing?	275
4.4 Further development	276
4.5 Conclusion	277

CHAPTER 12 D.S. Brée, A. Brand, J.F. Schreinemakers, J.H.M. Verheijden

ANIMAL FARM: AN INTELLIGENT KNOWLEDGE-BASED COMPUTER SYSTEM	279
1. Introduction	279
1.1 Modern information processing: the possibilities	280
2. The intelligent knowledge-based system: ANIMAL FARM	280
2.1 The <i>health manager</i>	282
2.2 The <i>production manager</i>	284
2.3 The <i>financial manager</i>	286
2.4 A day in the life of ANIMAL FARM	288
2.5 The required information	289
3. Economic and social aspects	291

CHAPTER 13 Dennis A. Gioia
COMMON GROUND?
THE INTERSECTION OF ARTIFICIAL INTELLIGENCE AND
ORGANIZATION AND MANAGEMENT THEORY 295

1. Introduction295

2. An ethnographic approach to the intersection of AI and OMT297

3. Questions as food for thought 301

4. Questions from a wider perspective307

5. Conclusion309
