	Introduction: More Interesting Times The Hammer Principle Flaws of Technical Analysis Overview of Advanced Trading Technology What Makes This Book Unique?	xxiii
Part One	Trading with Neural Networks	1
	1 Neural Network Techniques Casimir C. "Casey" Klimasauskas What Are Neural Networks? Time-Series Prediction Measuring Performance Neural Network Development Methodology Summary References	3
	2 Pre- and Postprocessing of Financial Data Guido J. Deboeck and Masud Cader Setting Objectives Data Collection, Analysis, and Transformations Sample Scripts for Data Transformations Types of Data and Data Scaling Identification of Output Indicators Preparing Training and Test Data Sets Testing and Evaluation of Neural Trading Systems Summary References	27
	3 Adaptive Selection of U.S. Stocks with Neural Nets James W. Hall Style-based Stock Portfolios The Deere & Company Style-Rotation Portfolio Sizing Up the Problem Guidelines for Modeling Evolutionary Complex System	45 ns

		Summary References	
	4	Predicting the Tokyo Stock Market Morio Yoda Can the Tokyo Stock Market Be Predicted? The Neural Net Prediction System Testing and Evaluation of the System Comparison of a Neural Versus Mechanical System Trading in Noisy Markets Summary References	66
	5	Intelligent Trading of an Emerging Market Gia-Shu Jang and Feipei Lai Problem Statement Stock Trading Using Adaptive-Structure Neural Networ Stock Data Modeling System Architecture Performance Evaluation Summary References	80 ks
	6	Trading U.S. Treasury Notes with a Portfolio of Neural Models Guido J. Deboeck and Masud Cader Daily Returns of U.S. Treasury Securities Trends in U.S. Treasuries Design of Neural Net Models Model Performance and Sensitivity of Results Performance of a Portfolio of Neural Net Models Summary References	Net 102
	7	Neural Nets for Foreign Exchange Trading Henry Green and Michael Pearson Foreign Exchange Markets Design Strategy References	123
Part Two	Si	trategy Optimization with Genetic Algorithms	131
	8	Genetic Algorithms and Financial Applications Laurence Davis The Origin of Genetic Algorithms Genetic Algorithms and Financial Applications Application Principles Conclusions References	133

9	Genetic Algorithms for Financial Modeling Andrew M. Colin Background Using a Genetic Algorithm Example 1: A Trend-Following Trading Model Example 2: Strategy Acquisition Example 3: Optimizing Combinations of Rules Commercially Available GA Packages Exercises References	
10	Using GAs to Optimize a Trading System Guido J. Deboeck Building a Hybrid Trading System Conclusions References	174
Part Three	Portfolio Management Using Fuzzy Logic	189
11	Why Use Fuzzy Modeling? Guido J. Deboeck Neural Versus Fuzzy Models Basic Math with Fuzzy Sets Creating a Fuzzy Rule Base Defuzzifying Results Practical Applications References	191
12	A Fuzzy System for Trading the Shanghai Stock Market Zhongxing Ye and Liting Gu Introduction Data Selection, Preprocessing, and Classification Fuzzy Rules Selection Fuzzy Decision and Trend Forecasting Empirical Results References	207
13	Smart Trading with FRET Dalila Benachenhou Fuzzy Systems for Trading Fuzzifying a Time Series Formulating or Extracting Fuzzy Rules How Do Fuzzy Systems Work? Letting FRET Trade Conclusions Appendix: An Object-Oriented Approach to Building FRE References	215 ET

	14	Hybrid Neural, Genetic, and Fuzzy Systems Francis Wong and Clarence Tan Strengths and Weaknesses of Advanced Techniques Hybrid Systems Conclusions References	243
Part Four	. 1	ionlinear Dynamics and Chaos	263
	15	and Chaos Theory Mark Embrechts What Is a Fractal? Methods for Computing Fractal Dimensions What Is Chaos? Methods for Detecting Chaos Methods for Determining Predictability Methods for Measuring Memory References	265
	16	Nonlinear Data Analysis Techniques Ted Frison Financial Time Series as Dynamic Systems Nonlinear Data Analysis Techniques Data Processing Guidelines References	280
	17	Nonlinear Dimensions of Foreign Exchange, Stock, and Bond Markets Mark Embrechts, Masud Cader, and Guido J. Deboeck Introduction Antipersistent Trends of U.S. Fed Fund Returns Biased Random Walk of U.S. Treasury Notes Predictability of Treasury Yields Analysis of Swiss Franc/U.S. Dollar Returns Analysis of the Japanese Stock Market Conclusions and Implications References	297
art Five	Ri	sk Management and the Impact of Technology	315
		Risk Management Measures Henry Green, Robert Mark, and Michael Pearson Financial Risk Defined Risk Management Strategies Position Management and Strategies Improving Portfolio Risk Management Summary References	317

19	The Impact of Technology on Financial Markets Guido J. Deboeck A Historical Perspective A Taxonomy of Market Hypotheses New Market Paradigms Based on Rational Beliefs Impact of Neural, Genetic, and Fuzzy Modeling Conclusions References	329
20	The Cutting Edge of Trading Technology Guido J. Deboeck Virtual Reality Robotic Trading Conclusions	344
	ssary liography ex	353 363 373
