List of Figures

4.1	1885–1981	21
2.2	Number of automobile manufacturers in France and	
	Germany, 1885–1981	22
2.3	Number of full-license and off-shore commercial banks in	
	Singapore, 1840–1990	23
2.4	Number of brewing firms in the United States, 1633–1995	24
2.5	Number of disk drive manufacturers in the world and in	
	North America, 1957–1996	24
2.6	General structure of demographic explanations	31
3.1	Distribution of durations in automobile production in the	
	U.S. industry	46
3.2	Annual entries into the U.S. automobile industry,	
	1885–1980	49
4.1	Decomposition of a localized set of organizations into	
	populations	76
6.1	Illustrative life-history data on organizations	103
6.2	Cumulative count of entries in historical time	105
6.3	Cumulative count of foundings in historical time	106
6.4	Proportion of interfounding times that exceed u	106
6.5	Proportion of organizational lifetimes that exceed u	107
6.6	Number of banks in the Tokyo prefecture, 1873-1945	120
6.7	Flow of Tokyo bank foundings over time, 1873-1926	121
6.8	Product-limit survivor function for interfounding times of	
	Tokyo banks, 1873–1926	124
6.9	Product-limit survivor function for mortality of Tokyo banks,	
	1873–1945	125

6.10	Cumulative hazard of founding by duration for Tokyo banks
6.11	Cumulative hazard of mortality for Tokyo banks
7.1	Estimated piecewise-exponential model for founding rates of Tokyo banks
7.2 7.3	Illustration of spell splitting
8.1	Entries for Evansville, Ind. in N.W. Ayer and Son's American Newspaper Annual and Directory, 1910
8.2	Entries for Evansville, Ind. in N.W. Ayer and Son's American Newspaper Annual and Directory, 1911
8.3	Entries for Evansville, Ind. in N.W. Ayer and Son's American Newspaper Annual and Directory, 1912
8.4	Illustrative entries in <i>The Standard Catalog of American Cars</i> , type 1 and type 3 entries
8.5	Illustrative entries in <i>The Standard Catalog of American Cars</i> , type 2 entries
10.1	Predicted relationship between density and the founding rate of banks in Singapore
10.2	Predicted relationship between density and the mortality rates of banks in Singapore
11.1	Estimated relationship of the entry rate with density and industry age for the French automobile industry
12.1	Number of U.S. brewing companies by organizational form, 1975–1995
12.2	Resource space available under various scenarios about competition with lower concentration
12.3	Resource space available under various scenarios about competition with higher concentration
12.4 12.5	Distribution of niches in a two-dimensional resource space Transformation of organizational size used in modeling
	scale competition
	Estimated age dependence in the mortality process for Tokyo banks
	Schematic representation of the expanded version of the core formalization for organizations lacking immunity
13.3	Schematic representation of the liability of newness for organizations lacking immunity
13.4	Schematic representation of the liability of senescence for organizations lacking immunity

List of Figures	xiii

14.1	Predicted relationships between relative size, tenure, and mortality for European automobile manufacturers	328
14.2	Predicted relationships between absolute size, tenure, and mortality for U.S. automobile manufacturers	329
14.3	Implied pattern of age dependence in the hazard of mortality for unendowed organizations with fragile positions	
14.4	in drifting environments	336 336
14.5	Implied pattern of age dependence in mortality hazards for unendowed organizations with robust positions for $\tau < \sigma$	337
15.1	Numbers of producers and preproducers in U.S. automobile manufacturing, 1885–1981	343
15.2	Entries of producers and preproducers into U.S. automobile manufacturing, 1885–1981	347
16.1	Two scenarios for the effect of transformation at age u_c on mortality with negative age dependence \dots	372
17.1 17.2	Illustration of three mechanisms for alignment Variations in the speed and directionality of processes	390
	generating alignment	394
18.1 18.2	Mass of banking populations in New York State, 1960–1990 Predicted masses of financial institutions in New York State	416
	before deregulation, 1960–1980	417
10.3	after deregulation, 1981–1990	417
19.1	General structure of corporate-demographic effects on jobs	429

List of Tables

2.1	Counts of U.S. business organizations, 1970–1990	18
2.2	Size distribution of U.S. corporations, 1990	19
2.3	Estimates of average business size in the United States,	
	1960–1990	20
3.1	Starting events among automobile makers in four	
	countries	43
3.2	Ending events among automobile makers in four	
	countries	45
5.1	Design features of research published in the Administrative	
	Science Quarterly, 1960-1995	87
5.2	Typical features of observation plans	94
5.3	Cross-sectional correlations between the coefficient of	
	variation in tenure and turnover	96
5.4	Coefficient of variation in tenure over time for a team with	
	demographic events	98
6.1	Narrative history of an organizational population with two	
	forms	102
6.2	Illustrative data file for population members described in	
	Table 6.1 and Figure 6.1	108
6.3	Estimates of constant-hazard models of mortality in the	
	French automobile industry, 1885–1981	114
6.4	Estimates of multiple-origin, multiple-destination hazards of	
	mortality in the French automobile industry, 1885-1981	117
6.5	Actuarial estimates of the life table for foundings of Tokyo	
	banks, 1873–1926	122
6.6	Actuarial estimate of the life table for mortality of Tokyo	
	banks, 1873–1945	123
	···,	

7.1	Estimates of constant and piecewise-exponential models of duration dependence in the founding rates of banks	
7.2	in Tokyo	137 157
7.3	Quality of estimates of a mortality function under left truncation and size truncation	158
7.4	Quality of estimates of an organizational-structure function	161
9.1	Effects of environmental conditions on the number of telephone companies by type across states	196
10.1	Estimates of density dependence in vital rates for Singapore banks, 1840–1990	220
	Hierarchical model contrasts involving the effects of density and industry age on entry rates in European automobile industries, 1886–1981	250
	model for entry rates of automobile manufacturers in Belgium, Britain, France, Germany, and Italy, 1886–1981	257
	Estimates of alternative specifications of age dependence in the mortality rates of banks in Tokyo Notation for predicates, functions, and key parameters used	286
	in the logical formalizations in Chapters 13 and 14	297
14.1	Estimates of baseline proportional-hazard models of the effects of age and size on the rate of exit of automobile manufacturing firms	325
14.2	Estimates of nonproportional-hazard models of the effects of age and size on the rate of exit of automobile manufacturing	<i>34</i> 0
14.3	firms	327 335
15.1	Estimates of effects on the rate of entry into production in	330
	the U.S. automobile industry	351
15.2	Estimates of effects on the rate of entry into preproduction in the U.S. automobile industry	352
15.3	Estimates of effects on moving from preproduction into production in the U.S. automobile industry based on	
	piecewise-exponential and log-logistic specifications	354

List of Tables	xvii

16.1	Overview of studies of effects of organizational change on mortality	369
16.2	Effects of innovation on the hazard of mortality for U.S. automobile producers	377
17.1	Experimental settings and outcomes of simulation experiments on historical efficiency	399
18.1	Estimates of organizational interdependence by	
	interconnection law status	405
18.2	Estimates of organizational interdependence before, during,	
	and after the Kingsbury agreement	409
18.3	Estimates of growth models of New York credit unions by regulatory period, 1914–1990	420
19.1	Estimates of jobs created and eliminated by corporate	
	demography	428
