## PART I PROLOGUE

---

<b>Chapter 1</b>	<b>Introduction</b>	<b>1</b>
1	Smith's "invisible hand" in commodity markets	1
2	Spatial interaction in economic theory	2
3	Spatial interaction in geographical analysis	3
4	Regional market integration and famines	5
5	Organization of commodity markets	7
5.1	The twentieth century wheat market	7
5.2	Which prices?	7
5.3	Long term evolution of ocean freight rates	10
6	Spatial price differentials	15
6.1	Three examples of spatial price differentials	15
6.2	Evolution of spatial price differentials	20
7	The concept of market integration	22
8	Defining and delimiting the problems to be investigated	25
9	The methodology of our approach: parsimony as a condition of testability	27
10	Empirical findings	28
10.1	Interdependence between markets	28
10.2	Price intercorrelations	29
10.3	Variations in trade with respect to transportation costs	29
10.4	The evolution of market integration	31
10.5	The evolution of price volatility	33
11	Outline of the book	34
<b>Chapter 2</b>	<b>Pricing models</b>	<b>37</b>
1	Dynamic market models with exogenous price expectations	37

1.1	Cobweb models without inventories	38
1	Conservative price anticipation	39
2	Extrapolative price anticipation	41
3	Adaptative price anticipation	41
4	The problem of mixed time scales	42
1.2	Cobweb models with inventories	43
1	A linear model	44
2	An example: the FAO cocoa price model	45
3	Comparison with empirical evidence	46
4	Nonlinear models	49
2	Rational expectations models	50
2.1	Origins of the concept of rational expectations	50
2.2	Rational expectations in commodity markets without inventories	54
2.3	Rational expectation with inventories	57
2.4	More about expectational equations	58
3	Oligopoly theory and spatial competition	60
3.1	The monopoly optimum	60
1	The firm is able to sell all it wishes	60
2	The firm cannot sell all it wishes	60
3.2	The duopoly equilibrium	61
1	Cournot's model	61
2	Nash equilibrium	62
3	Spatial competition: two marketplaces	62
4	Spatial competition: several marketplaces	64
A	Appendix A: Conditional expectation: a mathematical reminder	66
A.1	Conditional expectation: two random variables	66
1	Definitions	66
2	Basic properties of conditional expectation	67
A.2	Conditional expectation: generalization to $n$ random variables	68
B	Appendix B: Consumption, closing stocks and prices of cocoa, sugar and wheat	70

## **PART II    Equilibrium models**

---

<b>Chapter 3</b>	<b>The stochastic Enke-Samuelson arbitrage model</b>	<b>73</b>
1	Defining the stochastic Enke-Samuelson model	74
1.1	The spatial price equilibrium model	74
1	General presentation	74
2	The spatial price equilibrium model for two markets	75

3 Algebraic solution	77
4 Variational solution	78
1.2 Possible generalizations to more than two markets	79
1 The algebraic solution	79
2 The variational solution	79
1.3 The stochastic Enke-Samuelson model	80
1 The rationale of a stochastic model	80
2 Smoothing and linearization of the model	81
3 Consistency tests of the model	82
4 Predictions of the model	83
2 The stochastic Enke-Samuelson model for two markets	83
2.1 Basic equations	86
2.2 Solutions of the linear model	88
1 Uncorrelated local shocks (identical means)	88
2 Correlated local shocks (identical means)	90
3 Correlated local shocks (different means)	90
4 Linear versus nonlinear model	92
3 Chain of markets	92
3.1 Chain of markets: direct trade relations restricted to closest neighbours	95
1 Solving the linear model	96
2 Proof	97
3 Price differentials as a function of distance	100
4 Linear versus nonlinear model	100
3.2 Chain of markets with an arbitrary exchange pattern	100
1 Equations and results	101
2 Roots of reciprocal equation	102
3 Covariance function	103
4 Variance	104
5 Trade	105
6 Discussion	105
4 Market networks	106
4.1 Solving the linear Enke-Samuelson model	106
1 Equations of the model	106
2 Solution by Fourier transformation	107
3 Integral representation of the covariance function	107
4 Asymptotic expressions of the price covariance function	109
5 Approximation formula	109
4.2 Process of market integration	110
4.3 Price differentials as a function of inter-market distance	112
A Appendix A: Covariance function of a network of markets	113

A.1	Development for vanishing transportation costs	113
A.2	Asymptotic expression for large transportation costs	115
A.3	Approximation formula	116
<b>Chapter 4</b>	<b>Empirical evidence about transport costs</b>	<b>119</b>
1	Transportation costs	120
1.1	European nineteenth century wheat markets	120
1	Inter-regional trade	120
2	International trade	121
1.2	Twentieth century commodity markets	123
1	Inter-regional trade in the United States	123
2	International trade	125
1.3	Long term evolution of transportation costs	125
1	Rail and waterways freight rates	126
2	Ocean freight rates	127
3	Tariffs	128
2	The spatial patterns of price differentials	129
2.1	European nineteenth-century wheat markets	129
1	Comparison between the evolution of price differentials and of transportation costs	129
2	Methodology for the observation of price differentials	130
3	Price differentials at the regional level	132
4	Price differentials at the national level	135
5	Price differentials at the international level	136
2.2	Twentieth-century commodity markets	138
1	Wheat market in the United States	138
2	Potato market in the United States	138
2.3	Is the spatial distribution of prices Gaussian?	141
1	$\chi^2$ test versus cumulant tests	141
2	The spatial distribution of prices	142
3	The reduction in spatial price differentials and its implications	142
3.1	Evidence of long term price convergence	144
1	How to measure spatial price dispersion?	144
2	Spatial price convergence	145
3.2	The relationship between price convergence and decrease in price volatility	146
3.3	The relationship between price convergence and trade development	147
1	Trade development at the level of single commodities	147
2	Trade development at the macroeconomic level	151
4	Estimation of the Enke-Samuelson trade model	152

4.1	Methodology	152
4.2	Results	152
A	Appendix A: Dispersion measures for spatial distributions	154
A.1	The mean difference	154
1	Existence	154
2	Relation with Gini's coefficient	155
3	Sampling properties	155
A.2	The range of the sample	155
1	The limiting distributions	155
2	Sampling properties	156
B	Appendix B: Trade and wheat differentials between England and Prussia 1828-1859	157
C	Appendix C: Conversion tables for volumes, weights and currencies	158
<b>Chapter 5</b>	<b>Grain markets and demographic phenomena</b>	<b>159</b>
1	The green-belt model for city-size distributions	159
1.1	The finite Pareto distribution	162
1	Cumulated distribution of the finite Pareto distribution	162
2	Expectation of the finite Pareto distribution	164
3	Concentration of a finite Pareto distribution	165
1.2	Evolution of urban systems in the Pareto plane	166
1	The transportation constraint in the green-belt model	167
2	Graphical representation in the Pareto plane: possible trajectories	172
1.3	Confronting the implications of the model with empirical evidence	174
1	Sources	174
2	Empirical trajectories in the Pareto plane	176
3	Prices of commodities in small versus large cities	176
1.4	Conclusion	178
2	The impact of price fluctuations on vital rates	180
2.1	The methodology	180
1	Selecting the data	181
2	Alternative options for estimating the correlation	181
2.2	Results	182
1	Nineteenth century	182
2	Discussion of the period after World War I	188
A	Appendix A: Measure of concentration for a finite Pareto distribution	190
A.1	Expression of Gini's coefficient	190
A.2	Application to finite Pareto distributions	191

B Appendix B: First moments of a finite Pareto distribution	193
---	-----

## PART III DYNAMIC MODELS

---

<b>Chapter 6 Interdependence between markets and autoregressive modelling</b>	<b>195</b>
1 Analysing market interdependence	196
1.1 From price differentials to correlation analysis	196
1.2 General methods for measuring market interdependence	197
1 Model-independent measures of market integration	197
2 Model-dependent measures of market integration	197
1.3 Simulations of autoregressive modelling	200
1 Adjusting ARMA processes to a simulated multivariate process	200
2 Estimation of a multivariate autoregressive process	201
3 Inadequate sampling time	203
2 Correlation analysis	204
2.1 Methodology	204
1 The influence of foreign trade	204
2 Structural versus temporary interdependence	204
3 The data	207
2.2 Local interdependence	207
1 Regional level	209
2 National level	210
3 International level	210
2.3 Global measure of interdependence: the correlation length	214
1 The correlation length	214
2 The correlation length of precipitation	219
3 Evolution of the correlation length during the nineteenth century	220
3 Autoregressive modelling: dominant markets and satellite markets	220
3.1 Multivariate autoregressive models: identification and estimation	220
3.2 Application of multivariate autoregressive models	222
1 Direction of interaction	222
2 Satellite markets	225
4 Conclusion	226
A Appendix A: Technicalities of correlation analysis	227
A.1 Prewhitening or not	227

A.2	Differentiating or not	227
1	Confidence intervals and tests	229
B	Appendix B: Technicalities of autoregressive modelling	230
B.1	Definition of the models	230
B.2	Estimating the model	230
C	Appendix C: Wheat prices in England, Finland, France, Germany and the United States: 1801-1913	232
<b>Chapter 7</b>	<b>Spatial and space-time autoregressive processes</b>	<b>235</b>
1	Spectral functions and covariance functions of spatial processes	236
1.1	Spatial versus time dependent autoregressive processes	236
1	Causality condition	236
2	Boundary conditions	237
1.2	Green's functions of recurrence equations	238
1	Fundamental property	238
2	Green's functions of first-order equations	238
1.3	Spectral theory of autoregressive processes	239
1	The Fourier formalism	239
2	Applications	241
2	Stationarity conditions for spatial processes	245
2.1	Time dependent processes	245
1	Recurrence reasoning	245
2	The Schur theorem	246
2.2	Spatial processes	249
1	An illustrative example	249
2	Stationarity conditions in terms of roots of the characteristic equation	254
3	Stationarity conditions in terms of parameters of the process: second order processes	256
4	Stationarity conditions in terms of parameters of the process: symmetric processes	257
3	Maximum likelihood estimation in spatial autoregressive processes	260
3.1	Time dependent processes	260
3.2	Spatial processes	262
1	The nonlinear equations for the estimates	262
2	Discussion	264
3	The variance of the disturbances is unknown	265
4	Simulation	265
4	Space-time autoregressive processes	266
4.1	Multivariate autoregressive processes	266
1	The Green's matrix of a system of recurrence equations	267

2 Spectral theory: from Green's matrices to covariance functions	268
3 Stationarity conditions	269
4.2 Bidimensional processes	269
1 Definitions	269
2 Stationarity of diffusion and propagation processes	270
3 Maximum likelihood parameter estimation for space-time processes	271
A Appendix A: Validity of Fourier expansion for a system of finite size	275
B Appendix B: Stability of partial difference equations	276
B.1 Stability threshold in forward Euler's method	276
B.2 Stiff systems	277
B.3 The diffusion equation	277
B.4 The wave equation: Von Neumann's method and Courant ratio	278
<b>Chapter 8 Time dependent Enke-Samuelson trade models</b>	<b>281</b>
1 The equations of the dynamic Enke-Samuelson arbitrage models	282
1.1 Equations for two markets	284
1 The nonlinear model	284
2 The linear model	285
1.2 Equations for market networks	287
1 Connection to nearest neighbours	287
2 Long range interdependence	289
2. Stationary solutions of the Enke-Samuelson model	291
2.1 Stability in a set of spatially interdependent markets	291
2.2 Two markets	293
1 General expressions	294
2 Variance and coefficient of correlation	296
3 Behaviour of prices and of trade for large, respectively small transportation costs	296
4 Graphical representation	298
2.3 Three markets	298
1 General expressions	298
2 Developments to first and second order	301
3 Comment	301
2.4 Chain of markets	302
1 Slope of the covariance function in the vicinity of $t = 0$	302
2 Development to first order of the covariance function	304
3 Transient behaviour of trade and prices	305
3.1 Evolution of trade during the Great Depression	306

1 Qualitative discussion	306
2 Evolution of prices and trade expectations	307
3 The transient stochastic model	310
4 Statistical evidence	313
5 Clark's analysis of spatial price dispersion before and after the crash of 1929	313
4 The ergodic assumption: ensemble averages versus time averages	315
4.1 Definitions and criteria of ergodicity	315
4.2 Ergodicity and non stationarity	317
4.3 Ergodicity and Mandelbrot's scaling principle	318
 <b>Chapter 9 Dynamic random field models</b>	 <b>323</b>
1 Introduction	324
1.1 From discrete to continuous space-time equations	324
1 The continuous Enke-Samuelson model	324
2 Trade and price differentials	325
3 Generalizations and comments	326
1.2 The spectral theory in the continuous case	327
1.3 A special case	328
1 The covariance function	328
2 Qualitative features of the covariance function	330
3 Covariance function of regional price averages	332
2 Field equations	333
2.1 Classification of spatial differential equations of the second order	333
2.2 Source terms and boundary conditions	334
2.3 Diffusion versus wave equations	335
1 Linear equations	335
2 Nonlinear diffusion: the porous media equation	338
3 Correlation function of hyperbolic and parabolic random fields	338
3.1 The passage theorems	340
1 White noise	340
2 Comments	342
3 Spatially autocorrelated noise	342
4 Numerical computation	343
3.2 One and two-dimensional hyperbolic fields	344
1 White noise	344
2 Spatially autocorrelated noise	347
3.3 One and two dimensional parabolic fields	349
1 One spatial dimension	350
2 Two spatial dimensions	351

3.4	Random fields on one and two-dimensional spheres	352
1	Economic rationale of the introduction of fields on compact manifolds	352
2	Dynamic random field on the circumference of a circle	352
3	Dynamic random field on the sphere	355
4	Estimating the random field model	357
4.1	Selecting appropriate price data	357
4.2	Identification: qualitative analysis of statistical evidence	357
1	Modifications of intercorrelation functions with distance	357
2	Wave models versus diffusion models	359
3	Specifying the disturbance term	360
4.3	Estimating a random wave equation	361
1	Procedure	361
2	Hypothesis tests of the model	362
3	Time evolution of estimated parameters	364
4	Epidemic velocities	366
A	Appendix A: Expression of $c(x, 0)$ for a wave equation	369
B	Appendix B: Existence, continuity and differentiability of the Fourier integral	372
B.1	Continuity	372
B.2	Continuity and differentiability in $R^{n+1} - (0, 0)$	372
C	Appendix C: Green's functions of wave equations on one and two dimensional spheres	374
C.1	Green's function on $S_1$	374
C.2	Green's function on $S_2$	375
D	Appendix D: Checking the correlation function as a solution of the field equation	378

## PART IV EPILOGUE

---

<b>Chapter 10</b>	<b>Conclusion and perspectives</b>	<b>379</b>
1	"A study in analytical economics"	379
1.1	The two purposes of economics	379
1.2	"Collectors of facts"	382
2	Perspectives	383
2.1	Tests of quantitative models	383
2.2	Construction of qualitative models	383
	References	385
	Index	403
