Preface	3
---------------	---

Exchange rate misalignment: macroeconomic fundamentals as an indicator of exchange rate crises in transition economies

David M. Kemme and Saktinil Roy

I. Introduction	7
II. Determinants of the equilibrium real exchange rate and measuring misalignment	9
III. Measuring exchange rate misalignment and predicting currency crises	11
IV. Empirical Results	13
V. Conclusions	27
References	28
Appendix	32

What was driving the financial crises in the Central and Eastern European transition countries? Results from a probit analysis

Axel Brüggemann and Thomas Linne

I. Introduction	33
II. Survey of the literature	34
III. Exchange rate policy	35
IV. Estimation methodology and data	36
V. Explanatory variables	37
VI. Empirical results	39
VII. Conclusions	40
References	42
Appendix	44

Determinants of financial crises: an application of a probit model on the EU candidate countries

Matthias Deschryvere

I. Introduction	49
II. How can we empirically detect the determinants of financial crises?	49

III. What are the determinants of financial crises in the candidate countries?	51
3.1 The model and data	51
3.2 Explanatory Variables	52
3.3 Empirical Results	54
3.4 Some tests of the prognostic quality of the model	56
3.5 Do our results differ from previous analyses?	57
IV. Conclusions: some policy implications	58
References	60

An FEER approach on over- or undervalued Euroland entry

Jens Hölscher and Mariusz Jarmużek

I. Introduction	65
II. The Pre-ERM-II scenario	66
2.1 Hungary: The success story	67
2.2 Poland: On edge	68
2.3 Czech Republic: Critical	69
2.4 Currency boards: Safe option	70
III. The optimal entry exchange rate: An estimation	73
3.1 Estimating FEERs	73
3.2 The model of aggregate trade	74
3.3 The model of the trend current account	75
3.4 Structural flows	75
3.5 The results	76
IV. Strategic choice under EU restrictions (= Maastricht straight jacket)	77
V. Conclusions	80
References	82
Appendix	84

Major studies by the IWH on financial crises	89
