Preface V

Abbreviations XIX

1	Introduction: Chemical Biology – A New Science at the Crossroads of Chemistry and Biology	1
	<i>R. Breinbauer and H. Waldmann</i>	
1.1	Case Study 1: The Chemical Biology of Lipidated Proteins belonging to the Ras Superfamily	4
1.2	Case Study 2: Chemical Biology of Rab Proteins	7
1.3	Case Study 3: Identifying the Natural Biological Target of FK506 and the Design of Protein Dimerizers as a Research Tool in Chemical Biology	11
1.4	Case Study 4: Covalent Trapping of Protein–DNA Complexes	13
1.5	Case Study 5: Cellular Imaging and <i>In Vivo</i> Labeling of Proteins with Fluorescent Probes	15
1.6	Case Study 6: Modulating Cell Surface Architecture using Chemical Tools	17
1.7	Case Study 7: Allele-specific Inhibition of Kinases	19
1.8	Conclusions	20
1.9	Bibliography	21
2	DNA Synthesis and DNA Hybridization	23
	<i>S. Ficht, W. Hecker, A. Mattes, and O. Seitz</i>	
2.1	Abstract	23
2.2	Learning Targets	23
2.3	Theoretical Background	24
2.3.1	Basics	24
2.3.2	Chemical Synthesis of Oligonucleotides	24
2.3.2.1	Stability of Nucleic Acids	24
2.3.2.2	Protecting Groups	26
2.3.2.3	General Strategy for DNA Synthesis	28
2.3.3	Hybridization with Synthetic Oligonucleotides	29

2.3.3.1	Principles	29
2.3.3.2	Specificity of Hybridization	31
2.3.3.3	Dyeing Methods	31
2.4	Experimental Procedures	32
2.4.1	Preparations	32
2.4.2	Synthesis and Purification of an Oligonucleotide (16 bases) and Yield Determination	32
2.4.3	Determination of the T_M Value of a Match (6–8, 7–9) and a Single Mismatch Duplex (6–9, 7–8)	33
2.4.3.1	Materials	33
2.4.3.2	Preparation of DNA Solutions	33
2.4.3.3	Measurement of the Melting Temperature and Concentration of G+C	33
2.4.4	Detection of dsDNA in the Presence of ssDNA using Ethidium Bromide	33
2.4.4.1	Materials	33
2.4.4.2	Calibration	34
2.4.4.3	Determination of the Concentration of dsDNA and ssDNA	38
2.4.5	Laboratory Report	34
2.5	Bibliography	34
3	Doubly-labeled Peptide Nucleic Acids (PNAs) as Probes for the Detection of DNA Point Mutations	35
	<i>O. Köhler, S. Röttger, and O. Seitz</i>	
3.1	Abstract	35
3.2	Learning Targets	35
3.3	Theoretical Background	36
3.3.1	Basics of PNA	36
3.3.2	Synthesis of PNA	38
3.4	Experimental Procedures	40
3.4.1	Preparations	40
3.4.2	Synthesis of the PNA Beacon	42
3.4.2.1	Solid Phase Synthesis of the PNA–DABCYL Conjugate	42
3.4.2.2	Fluorescence Labeling of Ac-Lys(DABCYL)-ACCTACAGCC-HN-Lys-NH ₂	43
3.4.3	Detection of Single Nucleotide Polymorphism via Fluorescence Spectrometry	43
3.5	Bibliography	44
4	Synthesis and Characterization of a Covalent Oligonucleotide–Streptavidin Conjugate and its Application in DNA-directed Immobilization (DDI)	45
	<i>F. Kukolka, M. Lovrinovic, C. M. Niemeyer, and R. Wacker</i>	
4.1	Abstract	45
4.2	Learning Targets	45
4.3	Theoretical Background	45

4.3.1	(Strept)avidin–Biotin System and DNA Oligonucleotides as Molecular Tools	45
4.3.2	Covalent DNA–Streptavidin Conjugates	47
4.3.3	DNA-Directed Immobilization	48
4.4	Experimental Procedures	50
4.4.1	Conjugate Synthesis	50
4.4.1.1	Oligonucleotide Activation	50
4.4.1.2	STV Activation	50
4.4.1.3	Purification of Activated Oligonucleotide	50
4.4.1.4	Purification of Activated STV	50
4.4.1.5	Cross-linking of STV and Oligonucleotide, Quenching and Buffer Exchange	51
4.4.1.6	Purification of STV–Oligonucleotide Conjugate	51
4.4.1.7	Photometry and Conjugate Quantification	52
4.4.1.8	Buffers	53
4.4.2	Characterization of the Conjugates by Non-denaturing PAGE	53
4.4.2.1	Preparation of Separation Gel	53
4.4.2.2	Preparation of Stacking Gel	53
4.4.2.3	Sample Preparation	54
4.4.2.4	Electrophoresis	54
4.4.2.5	SybrGold Staining	54
4.4.2.6	Fixation	54
4.4.2.7	Silver Staining	55
4.4.2.8	Documentation	55
4.4.2.9	Buffers	55
4.4.3	Solid Phase Hybridization	56
4.4.3.1	Coating of Microplates with STV	56
4.4.3.2	Immobilization of Capture Oligonucleotides	56
4.4.3.3	Sample Preparation and Dilution Series	56
4.4.3.4	DNA-directed Immobilization (DDI)	57
4.4.3.5	Enzymatic Reaction	57
4.4.3.6	Fluorescence Detection	57
4.4.3.7	Buffers	59
4.5	Bibliography	59
5	Solid Phase Synthesis of Peptides: Bradykinin Analogs and the Evaluation of Calcium Mobilization in PC-12 Cells	61
	<i>C. Katzka, B. Ludolph, P. Janning, and C. Schultz</i>	
5.1	Abstract	61
5.2	Learning Targets	61
5.3	Theoretical Background	61
5.3.1	Biological Function of Bradykinin	61
5.3.2	PC-12 Cells	62
5.3.3	Calcium Measurements	62
5.3.4	Peptide Synthesis	65

5.3.4.1	Overview	65
5.3.4.2	Protecting Group Strategies	65
5.3.4.3	Choice of Peptide Sequence	67
5.3.4.4	Available Building Blocks	68
5.4	Experimental Procedures	69
5.4.1	Preparations	69
5.4.1.1	Cultivation of PC-12 Cells	69
5.4.1.2	Synthesis of the Hexameric Peptide	71
5.4.2	Peptide Synthesis	71
5.4.2.1	First Steps	71
5.4.2.2	Determination of Loading Efficiency	72
5.4.2.3	Coupling Procedure	72
5.4.2.4	Cleavage Procedure	72
5.4.2.5	Purification	72
5.4.2.6	Characterization of the Peptides	72
5.4.3	Measurement of Intracellular Ca^{2+} Levels	72
5.4.3.1	Incubation and Measurement Buffer	72
5.4.3.2	Fura-2 Loading	72
5.4.3.3	Calcium Measurements	72
5.5	Bibliography	74
6	<i>In silico</i> Protein Ligand Design	75
	<i>M. A. Koch, L. Arve, L. Kissau, and J. Gerdes</i>	
6.1	Abstract	75
6.2	Learning Targets	75
6.3	Theoretical Background	76
6.3.1	Overview	76
6.3.2	Three-Dimensional Protein Structures	77
6.3.3	Molecular Modeling	78
6.3.3.1	Molecular Mechanics (MM)	78
6.3.3.2	Quantum Mechanics (QM)	80
6.3.4	Computer-aided Drug Design	80
6.3.4.1	General Aspects	80
6.3.4.2	Program for Engineering Peptides (PEP)	81
6.3.5	Enzyme Catalysis and Inhibition	83
6.3.6	Non-Covalent Interactions	85
6.3.6.1	Electrostatic Interactions	85
6.3.6.2	Hydrophobic Interactions	86
6.3.6.3	Hydrogen Bonds	86
6.3.7	Rational Drug Design	88
6.3.7.1	Pharmacodynamics	88
6.3.7.2	Pharmacokinetics	88
6.3.7.3	Drug Optimization	89
6.3.7.4	Quantitative Structure–Activity Relationships (QSAR)	89
6.3.8	Retrosynthesis	90

6.4	Experimental Procedures	91
6.4.1	General Remarks	91
6.4.2	The General Modeling Process	92
6.4.3	Preparations	93
6.4.4	Preparation of the Seed Molecule	93
6.4.5	Minimization of the Protein Structure	97
6.4.6	Definition of the Binding Site	98
6.4.7	Generation of Peptides with PEP	99
6.4.8	Evaluation and Discussion of the Results	99
6.4.9	Retrosynthesis of a Non-Peptidic FTase Inhibitor	100
6.5	Bibliography	100
6.5.1	General Literature	100
6.5.2	Special Literature	101
6.6	Appendices	101
6.6.1	Appendix A	101
6.6.2	Appendix B	103
6.6.3	Appendix C	105
6.6.4	Appendix D	106
7	Lipidation of Proteins and Peptides: Farnesylation of the Ras Protein	107
	<i>S. Sommer, T. Voigt, I. Heinemann, B. Popkirova, R. Reents, and J. Kuhlmann,</i>	
7.1	Abstract	107
7.2	Learning Targets	107
7.3	Theoretical Background	108
7.3.1	Lipidation of Proteins	108
7.3.2	Ras Proteins	109
7.3.2.1	Signal Transduction Pathway	109
7.3.2.2	Ras Activation	111
7.3.2.3	Farnesylation	112
7.3.2.4	<i>In-Vitro</i> Farnesylation	113
7.3.2.5	Prenyl Selectivity of FTase	114
7.3.3	Techniques	114
7.3.3.1	Lyophilization	114
7.3.3.2	³¹ P-NMR	114
7.3.3.3	Triton-X114 Extraction	115
7.3.3.4	Mass Spectrometry Employing MALDI-TOF	115
7.4	Experimental Procedures	116
7.4.1	Preparations	116
7.4.2	Synthesis of Prenyl- and Alkylpyrophosphates	117
7.4.2.1	General	117
7.4.2.2	Preparation of the Ion Exchange Column	117
7.4.2.3	Preparation of Prenyl- and Alkylpyrophosphates	118
7.4.3	Farnesylation on an Analytical Scale	118
7.4.4	Farnesylation on a Preparative Scale	119

Contents

7.4.5	Determination of Protein Concentration	120
7.4.6	SDS-PAGE-Analysis of the Farnesylated Samples	121
7.4.7	Mass Spectrometry	121
7.5	Bibliography	122
7.5.1	Textbooks	122
7.5.2	Special Literature	122
8	Insertion of Lipidated Peptides into Model Membranes	123
	<i>D. Gottlieb and A. Watzke</i>	
8.1	Abstract	123
8.2	Learning Targets	123
8.3	Theoretical Background	124
8.3.1	Biological Membranes	124
8.3.2	Lipidation of Proteins	126
8.3.3	Biophysical Properties of Lipidated Peptides in Model Membranes	126
8.3.4	Basic Concepts of Fluorescence and Fluorescence Markers	130
8.4	Experimental Procedures	130
8.4.1	Preparations	136
8.4.2	Determination of the Partition Coefficient K_p	132
8.4.2.1	Preparation of the Peptide-Vesicle Solution	132
8.4.2.2	Preparation of Solutions of Empty Vesicles of Different Concentrations	132
8.4.2.3	Measurements by Fluorescence Spectroscopy	132
8.4.2.4	Interpretation of the Measurements	132
8.4.3	Vesicle Transfer	134
8.4.3.1	Synthesis of Vesicles Containing Fluorescence Quencher and Lipidated Peptides	134
8.4.3.2	Preparation of Empty Vesicles	134
8.4.3.3	Measurements	134
8.4.3.4	Interpretation of the Measurements	134
8.4.4	Determination of the Flip-Flop Exchange	135
8.4.4.1	Measurements	135
8.4.4.2	Interpretation of the Measurements	135
8.5	Bibliography	135
8.5.1	Textbooks	135
8.5.2	Special Literature	135
9	Isolation of Potato Phosphorylase and Enzymatic Synthesis of Amylose	137
	<i>M. Scheck, M. Manger, and N. Bisek</i>	
9.1	Abstract	137
9.2	Learning Targets	137
9.3	Theoretical Background	137
9.3.1	Overview	137

9.3.2	Principle of Polysaccharide Synthesis	139
9.3.3	Isolation of the Potato Phosphorylase	141
9.3.4	Synthesis of Amylose	141
9.3.5	Principle of the Phosphate Test	142
9.4	Experimental Procedures	142
9.4.1	Preparations	142
9.4.2	Isolation of the Potato Phosphorylase	143
9.4.3	Synthesis of Amylose and Colorimetric Determination	143
9.5	Bibliography	144
9.5.1	Textbook	144
9.5.2	Special Literature	144
10	Proteome Analysis: Identification of Proteins Isolated from Yeast	145
	<i>H. Prinz, D. Goehrke, P. Janning, and K. Reinecke</i>	
10.1	Abstract	145
10.2	Learning Targets	145
10.3	Theoretical Background	146
10.3.1	Introduction	146
10.3.2	MALDI Mass Spectrometry	146
10.3.3	Electrospray Mass Spectrometry using Ion Trap Analyzers	148
10.3.3.1	Principle	148
10.3.3.2	Controlled Fragmentation (MS/MS)	149
10.3.4	MS/MS Fragmentation of Peptides	149
10.3.5	High Performance Liquid Chromatography (HPLC)	149
10.3.6	Two-dimensional Gel Electrophoresis	150
10.3.6.1	First Dimension: Isoelectric Focusing	150
10.3.6.2	Second Dimension: SDS-PAGE	150
10.3.7	Proteolytic Digestion	151
10.3.7.1	Principle	151
10.3.7.2	Characterization by Mass Spectrometry	151
10.4	Experimental Procedures	151
10.4.1	Preparations	151
10.4.2	Cell Disruption	152
10.4.2.1	Principle	152
10.4.2.2	Preparation of Cell Lysate	152
10.4.3	Two-dimensional Gel Electrophoresis	152
10.4.3.1	Introduction	152
10.4.3.2	First Dimension: Isoelectric Focusing	152
10.4.3.3	Second Dimension: SDS-PAGE	153
10.4.4	<i>In-gel</i> Digestion of Proteins Separated by Polyacrylamide Gel Electrophoresis	154
10.4.5	MALDI Mass Spectrometry	155
10.4.6	Alternative: HPLC ESI-MS/MS	156
10.4.6.1	Principle	156
10.4.6.2	Protein Quantification	156

10.4.6.3	Preparation of a Peptide Mix	157
10.4.6.4	HPLC/MS	158
10.4.7	Data Analysis	158
10.5	Bibliography	159
11	Lectins: Determination of the Sugar Specificity of Jacalin by a Sugar–Lectin Binding Assay (SLBA)	161
	<i>E. Gourzoulidou and S. Schlummer</i>	
11.1	Abstract	161
11.2	Learning Targets	161
11.3	Theoretical Background	162
11.3.1	Lectins	162
11.3.2	Sugar–Lectin Binding Assay (SLBA)	164
11.4	Experimental Procedures	167
11.4.1	Preparations	167
11.4.1.1	Periodate-treated BSA	167
11.4.1.2	Composition of Buffers	167
11.4.2	Synthesis of Biotin–Galactose (BG) Conjugate	168
11.4.3	Sugar–Lectin Binding Assay (SLBA)	168
11.4.4	Calculations	169
11.5	Bibliography	170
12	Combinatorial Synthesis and Genetic Algorithm	171
	<i>T. Lessmann, S. Eichhorn, and J. Huber</i>	
12.1	Abstract	171
12.2	Learning Targets	171
12.3	Theoretical Background	172
12.3.1	Introduction	172
12.3.2	Multi-component Reactions	179
12.3.3	Genetic Algorithm	173
12.3.3.1	Overview	173
12.3.3.2	Encoding the Compounds	174
12.3.3.3	Recombination	174
12.3.3.4	Mutation	175
12.3.4	Biological Activity	175
12.3.5	Course of the Experiment	177
12.4	Experimental Procedures	177
12.4.1	Synthesis of the α -Amino Amides	177
12.4.2	Thrombin Assay	177
12.4.2.1	Reagents	177
12.4.2.2	Procedure	178
12.4.3	Data Analysis	178
12.4.4	Tasks and Questions	179
12.5	Bibliography	179

12.5.1	Textbook	179
12.5.2	Special Literature	179
13	Solid Phase Synthesis of an Antibiotic	181
	<i>C. Peters, C. Rosenbaum, and F. Stieber</i>	
13.1	Abstract	181
13.2	Learning Targets	181
13.3	Theoretical Background	181
13.3.1	Combinatorial Synthesis of Low Molecular Weight Compound Libraries	181
13.3.2	Linkers for Solid-phase Synthesis	182
13.3.3	The Hydrazide Linker: An Oxidation Labile Traceless Linker	183
13.3.4	Acid-functionalized Resins	184
13.3.5	Solid-phase Synthesis of Antibiotics	185
13.4	Experimental Procedures	187
13.4.1	Project A: Synthesis of Functionalized Resin	187
13.4.1.1	Procedure for the Preparation of Adipic Acid Monomethyl Ester-functionalized Supports	187
13.4.1.2	Hydrolysis of Polymer-bound Methyl ester to Yield Acid-functionalized Polymeric Support 9	187
13.4.1.3	Esterification of Acid-functionalized Resin with 2-Methoxy-5-nitrobenzylester 10 (Determination of Loading)	187
13.4.1.4	Determination of Loading by Means of UV-spectroscopic Analysis of 2-Methoxy-5-nitrobenzyl Alcohol 12	188
13.4.2	Project B: Synthesis of an Antibiotic	188
13.4.2.1	Synthesis of 4-Iodophenylhydrazine 13	188
13.4.2.2	Polystyrene-bound 4-Iodophenylhydrazide 14	189
13.4.2.3	Polystyrene-bound Biphenylaldehyde 20	189
13.4.2.4	Synthesis of 4'-biphenylmethyl-(4-Thiomorpholin-4-ylmethyl-phenyl)-amine 21 a	189
13.4.2.5	General Procedure for the Oxidative Cleavage of the Phenylhydrazide Linker Utilizing Cu(OAc) ₂ , Methanol and Pyridine	190
13.4.2.6	Synthesis of 4-(4-Nitrobenzyl)thiomorpholine 17a	190
13.4.2.7	Synthesis of 4-Thiomorpholinomethylaniline 18a	190
13.5	Bibliography	191

Appendix	193
