Adams,E., Cordes,D., Lohner,R.:	
Enclosure of solutions of ordinary initial value problems and applications	9
Anselone,P.M., Ansgore,R.:	
Discrete closure and asymptotic (quasi-)regularity in discretization algorithms	29
Bauch,H., Wiebigke,V.:	
On the inclusion of solutions of initial value problems for ordinary differential equations by means of intervalanalytical methods	41
Burmeister,W., Dietze,S., Heß,W., Schmidt,J.W.:	
Solution of a class of weakly coupled programs via dualization, and applications	57
Čermák,L.:	
Finite element solution of a nonlinear diffusion problem with a moving boundary	81
Fröhner,M.:	
Error estimates for solution of hyperbolic differential equations	91
Großmann,Ch.:	
Monotone discretization of two-point boundary value problems and related numerical methods	99
Hemker,P.W..	
Multigrid and improved accuracy for the Euler equations	123
Lehmann,R.:	
A computable finite element interpolation error bound in the uniform metric	137
Marek,I.:	
Aggregation and homogenization in reactor diffusion	145
Roos,H.-G.:	
The Rothe method and monotone discretization for parabolic equations	155
Scholz,S.:	
On the behaviour of m-stage ROW methods with global error estimation in the smooth phase of stiff problems	167
Sens,F.M.:	
A posteriori error estimates for semilinear parabolic equations	183

Shokin, Yu.I., Novikov, V.A., Bazarov, M.V.:	
On the construction and package realization of interval methods for solving ordinary differential equations	197
Spijker, M.N.:	
Monotonicity and contractivity phenomena in the numerical solution of stiff differential equations	207
Strehmel, K., Weiner, R.:	
Uniformly consistent and convergent linearly implicit Runge-Kutta schemes in the method of lines	219
Tobiska, L.:	
Monotone discretization methods for singularly perturbed problems and its application for enclosing solutions	235
Windisch, G.:	
A maximum principle for systems with diagonally dominant M-matrices	243
Kulisch, U.	
The development of computer arithmetic	251
