|                                                                                                                  |      |
|------------------------------------------------------------------------------------------------------------------|------|
| Foreword .....                                                                                                   | xi   |
| Preface .....                                                                                                    | xiii |
| Nest algebras, causality constraints, and multirate robust control .....                                         | 1    |
| <i>Tongwen Chen and Li Qiu</i>                                                                                   |      |
| Does Rantzer's convex direction theorem sound the death knell for new<br>Vertex results in robust control? ..... | 21   |
| <i>C.V. Hollot</i>                                                                                               |      |
| Robustness to bounded inputs and structured uncertainty:<br>Analysis and synthesis .....                         | 41   |
| <i>Mustafa H. Khammash</i>                                                                                       |      |
| Robust stabilization for $\ell_p$ gap perturbations .....                                                        | 55   |
| <i>Li Qiu and Daniel E. Miller</i>                                                                               |      |
| Generalized $\mathcal{H}_2/\mathcal{H}_\infty$ control .....                                                     | 81   |
| <i>Mario A. Rotea and Pramod P. Khargonekar</i>                                                                  |      |
| On the computation of suboptimal $H^\infty$ controllers for unstable<br>infinite dimensional systems .....       | 105  |
| <i>Onur Toker and Hitay Özbay</i>                                                                                |      |
| Robust stabilization for parametric uncertainty with application<br>to magnetic levitation .....                 | 129  |
| <i>Shigeru Yamamoto and Hidenori Kimura</i>                                                                      |      |
| Let's get real .....                                                                                             | 143  |
| <i>Peter M. Young, Matthew P. Newlin, and John C. Doyle</i>                                                      |      |
| Weighted approximation techniques and their applications in controller<br>reduction .....                        | 175  |
| <i>Kemin Zhou</i>                                                                                                |      |
