

# Contents

|                      |     |
|----------------------|-----|
| <b>Preface</b> ..... | vii |
|----------------------|-----|

|                        |      |
|------------------------|------|
| Note on Notation ..... | viii |
|------------------------|------|

## Lecture 1

### PRE-ASYMPTOTIC COMBUSTION REVISITED

|                                                       |    |
|-------------------------------------------------------|----|
| 1. Ignition .....                                     | 1  |
| 2. Spontaneous combustion .....                       | 2  |
| 3. Homogeneous explosion .....                        | 4  |
| 4. Inhomogeneous explosion .....                      | 6  |
| 5. Ignition by external agencies .....                | 10 |
| 6. Ignition by an externally generated hot spot ..... | 11 |

## Lecture 2

### GOVERNING EQUATIONS, ASYMPTOTICS, AND DEFLAGRATIONS

|                                                                |    |
|----------------------------------------------------------------|----|
| 1. Equations for dilute mixtures .....                         | 13 |
| 2. Nondimensional equations; Shvab-Zeldovich formulation ..... | 16 |
| 3. Activation-energy asymptotics .....                         | 17 |
| 4. Plane deflagration waves .....                              | 17 |
| 5. Generalizations .....                                       | 22 |

## Lecture 3

### GENERAL DEFLAGRATIONS

|                                                                     |    |
|---------------------------------------------------------------------|----|
| 1. The hydrodynamic limit .....                                     | 23 |
| 2. Governing equations for the constant-density approximation ..... | 25 |
| 3. Slow variations with loss of heat .....                          | 26 |
| 4. Multidimensional flames .....                                    | 30 |

## Lecture 4

### SVFs AND NEFs

|                                        |    |
|----------------------------------------|----|
| 1. Flame stretch .....                 | 33 |
| 2. The basic equation for SVFs .....   | 34 |
| 3. The effect of stretch on SVFs ..... | 36 |
| 4. The basic equations for NEFs .....  | 38 |
| 5. NEFs near a stagnation point .....  | 40 |

**Lecture 5****STABILITY OF THE PLANE DEFLAGRATION WAVE**

|                                        |    |
|----------------------------------------|----|
| 1. Darrieus-Landau instability .....   | 45 |
| 2. The Lewis-number effect: SVFs ..... | 48 |
| 3. The Lewis-number effect: NEFs ..... | 50 |
| 4. The role of curvature .....         | 53 |

**Lecture 6****CELLULAR FLAMES**

|                                         |    |
|-----------------------------------------|----|
| 1. Chaotic cellular structure .....     | 57 |
| 2. Effect of curvature .....            | 60 |
| 3. Flames near a stagnation point ..... | 62 |
| 4. Polyhedral flames .....              | 65 |
| 5. Other cellular flames .....          | 69 |

**Lecture 7****PULSATING FLAMES**

|                                                    |    |
|----------------------------------------------------|----|
| 1. Solid combustion .....                          | 71 |
| 2. The delta-function model .....                  | 73 |
| 3. Stability of thermite flames .....              | 74 |
| 4. Flames anchored to burners .....                | 77 |
| 5. Stability of burner flames .....                | 79 |
| 6. Pulsations for rear stagnation-point flow ..... | 81 |

**Lecture 8****COUNTERFLOW DIFFUSION FLAMES**

|                                        |    |
|----------------------------------------|----|
| 1. Basic equations .....               | 85 |
| 2. The S-shaped burning response ..... | 87 |
| 3. General extinction analysis .....   | 90 |
| 4. Partial-burning branch .....        | 92 |
| 5. Stability .....                     | 93 |
| 6. The ignition point .....            | 95 |

**Lecture 9****SPHERICAL DIFFUSION FLAMES**

|                                                   |     |
|---------------------------------------------------|-----|
| 1. Basic equations .....                          | 97  |
| 2. Nearly adiabatic burning .....                 | 100 |
| 3. General extinction and ignition analyses ..... | 102 |
| 4. Surface equilibrium .....                      | 105 |

**Lecture 10****FREE-BOUNDARY PROBLEMS**

|                                   |     |
|-----------------------------------|-----|
| 1. The hydrodynamic limit .....   | 109 |
| 2. The Burke-Schumann limit ..... | 110 |
| 3. NEF tips .....                 | 112 |

|                                     |     |
|-------------------------------------|-----|
| 4. NEF wall-quenching .....         | 115 |
| 5. Straining NEFs .....             | 119 |
| 6. Shearing NEFs .....              | 121 |
| Appendix. The method of lines ..... | 122 |
| <b>References</b> .....             | 125 |
