CONTENTS

Preface iii

Contributors vii

Persistence in Lotka-Volterra Models of Food Chains and Competition 1
Thomas G. Hallam

Mathematical Models of Humoral Immune Response 13
Stephen J. Merrill

Mathematical Models of Dose and Cell Cycle Effects in Multifraction Radiotherapy 51
Howard D. Thames, Jr.

Theoretical and Experimental Investigations of Microbial Competition in Continuous Culture 107
Paul Waltman
Stephen P. Hubbell
Sze-Bi Hsu

A Liapunov Functional for a Class of Reaction-Diffusion Systems 153
Nicholas D. Alikakos

Stochastic Prey-Predator Relationships 171
Georges A. Bécus

Coexistence in Predator-Prey Systems 199
G. J. Butler

Stability of Some Multispecies Population Models 209
B. S. Goh

Population Dynamics in Patchy Environments 217
Alan Hastings

Limit Cycles in a Model of B-Cell Stimulation 225
Stephen J. Merrill

Optimal Age-Specific Harvesting Policy for a Continuous Time - Population Model 239
Chris Rorres
Wyman Fair

Models Involving Differential and Integral Equations Appropriate for Describing a Temperature Dependent Predator-Prey Mite Ecosystem on Apples 255
David J. Wollkind
Alan Hastings
Jesse A. Logan
