Plates

1	The Champs Elysées from the Place de l'Étoile in Paris: Haussmann's transformation of Paris provided aesthetic harmony, greater transport access, and visual clarity to the city's medieval street pattern.	6
2	The Ramblas in Barcelona, Spain: Jane Jacobs' notion of "street ballet" can be found on sidewalks around the world.	78
3	Café culture at Bryant Park, New York City: Ray Oldenburg's concept of the "third place" (settings where an informal social life can thrive) is recognized most easily in sidewalk cafés and coffee houses where people can spend time with friends and meet new people.	116
4	Architectural details in Barcelona, Spain: unique building elements and public art can provide visual interest and reinforce local place identity.	150
5–8	Residential building types in the French Quarter of New Orleans: the plantation-style French Colonial House, circa mid-eighteenth century; the very adaptable Creole Cottage, circa early nineteenth century; the vertically oriented Townhouse, built throughout the nineteenth century; and the diminutive Single Shotgun, circa late nineteenth century.	228–31
9	New Urbanism at Seaside, Florida: neo-traditional building form is prescribed and regulated by means of an Urban Code as developed by Andres Duany and Elizabeth Plater-Zyberk.	288
10	Traffic congestion in Bangkok, Thailand: improvements in mass-transit infrastructure are attempting to mitigate the negative impacts of constant gridlock en-route to transforming Bangkok into a Transit Metropolis.	350
11	The Transit Mall in San Jose, California: the roles and responsibilities of redevelopment and planning agencies are having ever greater impacts on urban design outcomes, as can be seen here in San Jose's new light rail line.	440
