M. G. Krein, THE BASIC PROPOSITIONS OF THE THEORY OF λ -ZONES OF STABILITY OF A CANONICAL SYSTEM OF LINEAR DIFFERENTIAL EQUATIONS WITH PERIODIC COEFFICIENTS	1
Introduction	1
§ 1. Auxilliary propositions from matrix theory. . .	7
§ 2. The canonical system of differential equations with periodic coefficients.	18
§ 3. Selfadjoint boundary value problems for the canonical system.	25
§ 4. Multipliers of the first and second kind of a canonical system of positive type	35
§ 5. Zones of stability of a canonical system with a parameter	45
§ 6. The central zone of stability of a canonical system (0.1) of positive type	54
§ 7. Tests for λ to belong to the central zone of stability.	66
§ 8. The case of a second-order canonical system . .	72
§ 9. The zones of stability of a system of second- order differential equations.	89
§10. The critical frequencies of an ϵ -parametrically perturbed system.	98
 M. G. Krein, ON CERTAIN NEW STUDIES IN THE PERTURBATION THEORY FOR SELFADJOINT OPERATORS	 107
First Lecture.	107
Second Lecture	119
Third Lecture.	127

Fourth Lecture	136
Fifth Lecture.	145
Sixth Lecture.	154

M. G. Krein, ON NONLINEAR INTEGRAL EQUATIONS WHICH PLAY A ROLE IN THE THEORY OF WIENER-HOPF EQUATIONS. I,II. .	173
Introduction	173
§ 1. The fundamental solution of equation (!). . . .	175
§ 2. The simplest properties of the solutions to equation (!).	178
§ 3. Nonlinear equations related to equation (!) . .	182
§ 4. Additional properties of the solutions to equation (!).	185
§ 5. Auxilliary lemmas from analytic function theory.	199
§ 6. A more detailed analysis of the case $w(0) < 0$	208
§ 7. The case $w(0) = 0$	217
§ 8. The case when $k(t)$ is an absolutely monotonic function of $ t $	228

I. C. Gohberg and M. G. Krein, ON A PAIR INTEGRAL EQUATION AND ITS TRANSPOSE	243
Introduction	243
§ 1. Auxilliary propositions	246
§ 2. The pair integral equation and its transpose. .	252
§ 3. The pair and transposed integral equations with zero index.	255
§ 4. The integral equation with positive index . . .	261
§ 5. The integral equations with negative index. . .	267
§ 6. The spectrum of the operator K_{π}	270
§ 7. A remark concerning the discrete analogues of equations (!) and (! ^T).	272

I. C. Gohberg and M. G. Krein, NEW INEQUALITIES FOR THE CHARACTERISTIC NUMBERS OF INTEGRAL EQUATIONS WITH SMOOTH KERNELS	275
--	-----

Introduction	275
§ 1. A theorem about a lower bound for the eigenvalues of products of operators.	277
§ 2. A direct proof or relation (1.7).	280
§ 3. The case of nonselfadjoint operators.	282
§ 4. Applications to integral equations.	283
§ 5. Integral equations having a positive definite $\delta(G)$	287
§ 6. Applications to integral equations with a weight.	288
§ 7. Applications to higher-dimensional equations. .	291

M. G. Krein and F. E. Melik-Adamyany, A CONTRIBUTION TO THE THEORY OF S-MATRICES OF CANONICAL DIFFERENTIAL EQUATIONS WITH SUMMABLE POTENTIAL.	295
