

## TABLE OF CONTENTS

Introduction . . . . .	1
I. Formally normal and symmetric subspaces . . . . .	7
1. Linear relations and subspaces . . . . .	7
2. Formally normal and normal subspaces . . . . .	10
3. Symmetric and self-adjoint subspaces . . . . .	13
II. Extensions of formally normal and symmetric subspaces . . . . .	17
1. Formally normal and normal extensions of a formally normal subspace . . . . .	17
2. Symmetric and self-adjoint extensions of a symmetric subspace . . . . .	25
3. The Friedrichs extension of a semibounded symmetric subspace . . . . .	37
4. An example . . . . .	41
III. Extensions of formally normal and symmetric subspaces in larger Hilbert spaces . . . . .	45
1. Normal extensions of a formally normal subspace in larger Hilbert spaces . . . . .	45
2. Self-adjoint extensions of a symmetric subspace in larger Hilbert spaces . . . . .	56
IV. Applications . . . . .	63
1. Extensions of non-densely defined operators . . . . .	63
2. Subspaces of an orthogonal sum of two Hilbert spaces . . . . .	70
3. Subspaces generated by pairs of symmetric operators . . . . .	75
References . . . . .	79
