Preface	ix
A new approach to upscaling for two-phase flow in heterogeneous porous media JØRG AARNES AND MAGNE S. ESPEDAL	1
Modeling fractures as interfaces for flow and transport in porous media CLARISSE ALBOIN, JÉRÔME JAFFRÉ, JEAN E. ROBERTS, AND CHRISTOPHE SERRES	13
A family of higher-order Eulerian-Lagrangian localized adjoint methods for advection-diffusion equations MOHAMED AL-LAWATIA AND HONG WANG	25
Algorithmic aspects of a locally conservative Eulerian-Lagrangian method for transport-dominated diffusive systems CÉSAR ALMEIDA, JIM DOUGLAS, JR., FELIPE PEREIRA, LUIS C. ROMAN, AND LI-MING YE H	37
A streamline front tracking method for two- and three-phase flow including capillary forces INGA BERRE, HELGE K. DAHLE, KENNETH H. KARLSEN, AND HANS F. NORDHAUG	49
Adaptive and formfree identification of nonlinearities in fluid flow from column experiments SANDRO BITTERLICH AND PETER KNABNER	63
Overall behaviour of fractured porous media versus fractures' size and permeability ratio ALAIN BOURGEAT	75
Hysteresis and upscaling in two-phase flow through porous media MICHAEL A. CELIA AND ANDREW J. GUSWA	93
Simulation of biobarrier-protozoa interaction in porous media BENITO M. CHEN-CHARPENTIER AND HRISTO V. KOJOUHAROV	105
Mixed discontinuous FE methods and their applications to two-phase flow in porous media HONGSEN CHEN, ZHANGXIN CHEN, GUANREN HUAN, AND ZHONGXIAO WANG	113

Two-phase immiscible flow with the viscous drag in naturally fractured reservoirs ZHANGXIN CHEN, YANLI CUI, AND QIAOYUAN JIANG	127
Mixed finite element methods for multiphase flow in petroleum reservoirs with multiple wells Mixed finite element methods for multiphase flow in petroleum reservoirs with multiple wells ZHANGXIN CHEN, GUANREN HUAN, AND BAOYAN LI	141
An acceleration procedure for the spectral element ocean model formulation of the shallow water equations CRAIG C. DOUGLAS, GUNDOLF HAASE, AND MOHAMED ISKANDARANI	153
Relations between phase mobilities and capillary pressures for two-phase flows in fractured media JIM DOUGLAS, JR., FELIPE PEREIRA, AND LI-MING YEH	159
Parameter estimates for high-level nuclear transport in fractured porous media JIM DOUGLAS, JR. AND ANNA M. SPAGNUOLO	173
Overlapping grids for welltest analysis DUGALD B. DUNCAN AND YIQI QIU	185
Upscaling of biological processes and multiphase flow in porous media RICHARD E. EWING	195
A numerical simulation of multicomponent gas flow in porous media by projection methods RICHARD E. EWING, JUNPING WANG, SUZANNE L. WEEKES, AND YONGJUN YANG	217
Recent developments on modeling and analysis of flow of miscible fluids in porous media XIAOBING FENG	229
A simple model for scale up error JAMES GLIMM, YOON-HA LEE, AND KENNY YE	241
Conservative front tracking in one space dimension JAMES GLIMM, XIAO LIN LI, AND YINGJIE LIU	253
BEM with collocation for the heat equation with Neumann and mixed boundary values NORBERT HERRMANN	265
Applications of the control volume function approximation method to reservoir simulations GUANREN HUAN, ZHANGXIN CHEN, AND BAOYAN LI	279
Analysis of 1-D moment equations for immiscible flow KENNETH D. JARMAN AND THOMAS F. RUSSELL	293
Locally optimal pumping and treatment rates in uncertain environments DANIEL L. KERN, JOHN J. WESTMAN, AND FLOYD B. HANSON	305

A general multigrid framework for a class of perturbed problems DO Y. KWAK	317
Modeling horizontal wells using hybrid grids in reservoir simulations BAOYAN LI, ZHANGXIN CHEN, AND GUANREN HUAN	327
A multiblock mixed finite element method for 2D and 3D elliptic problems on mixed unstructured grids and its parallelization JICHUN LI	343
Network flow model studies and 3D pore structure W. BRENT LINDQUIST	355
Pore scale network modelling of gas slippage in tight porous media QINGJIE LIU, PINGPING SHEN, AND PUHUA YANG	367
The calculation of relative permeability by history matching and Beth network model QINGJIE LIU, JINXUN WANG, PUHUA YANG, AND PINGPING SHEN	377
Comparison between pore-level and porous medium models for natural convection in a non-homogeneous enclosure ALI A. MERRIKH, JOSÉ L. LAGE, AND ABDULMAJEED A. MOHAMAD	387
New models for predicting temperature-dependent viscous effects on flow through porous media ARUNN NARASIMHAN AND JOSÉ L. LAGE	397
Balancing domain decomposition for porous media flow in multiblock domains GERGINA PENCHEVA AND IVAN YOTOV	409
Non conforming methods for transport with nonlinear reaction BÉATRICE RIVIÈRE AND MARY F. WHEELER	421
A high order Lagrangian scheme for flow through unsaturated porous media LOUIS F. ROSSI	433
Partition of unity coarse spaces MARCUS SARKIS	445
Uncertainty reduction in reservoir modeling SAM SUBBEY, MIKE CHRISTIE, AND MALCOLM SAMBRIDGE	457
A Eulerian-Lagrangian substructuring domain decomposition method for multidimensional, unsteady-state advection-diffusion equations HONG WANG, JIANGGUO LIU, MAGNE S. ESPEDAL, AND RICHARD E. EWING	469
An ELLAM simulator for highly compressible flow in porous media with multiple wells H. WANG, W. ZHAO, R. E. EWING, S. L. LYONS, AND G. QIN	481
Single-degree freedom collocation method using Hermite polynomials LI WU AND G. F. PINDER	489

A Taylor-Galerkin finite element method for one-dimensional hyperbolic conservation laws XIJUN YU AND YONGHONG WU	501
Morphological evolution of a 3D array of particles under surface diffusion WEN ZHANG AND IAN GLADWELL	519
