

Table of Contents

Introduction	1
Part A. Pure Logic	5
Chapter I. Fundamentals	7
§ 1. Classical Sentential Calculus	7
1. Truth Functions	7
2. Sentential Forms	8
3. Complete Systems of Connectives	8
4. A Formal Language for the Sentential Calculus	9
5. Positive and Negative Parts of Formulas	10
6. Syntactic Characterization of Valid Formulas	12
§ 2. Formal Systems	13
1. Fundamentals	13
2. Deducible Formulas	14
3. Permissible Inferences	15
4. Sentential Properties of Formal Systems	16
5. The Formal System CS of the Classical Sentential Calculus	17
Chapter II. Classical Predicate Calculus	19
§ 3. The Formal System CP	19
1. Primitive Symbols	19
2. Inductive Definition of the Formulas	20
3. P-Forms and N-Forms	20
4. Positive and Negative Parts of a Formula	20
5. Axioms	20
6. Basic Inferences	20
§ 4. Deducible Formulas and Permissible Inferences	21
1. Generalizations of the Axioms	21
2. Weak Inferences	22
3. Further Permissible Inferences	24
4. Defined Logical Connectives	25

§ 5. Semantics of Classical Predicate Calculus	26
1. Classical Models	27
2. The Consistency Theorem	28
3. The Completeness Theorem	28
4. The Satisfiability Theorem	32
5. Syntactic and Semantic Consequences	35
Chapter III. Intuitionistic Predicate Calculus	36
§ 6. Formalization of Intuitionistic Predicate Calculus	36
1. The Formal System IP1	36
2. The Formal System IP2	38
3. Left and Right Parts of Formulas	39
4. The Formal System IP3	40
§ 7. Deducible Formulas and Permissible Inferences in the System IP3	42
1. Generalizations of the Axioms	42
2. Weak Inferences	42
3. More Permissible Inferences	44
4. Special Features of Intuitionistic Logic	46
5. Properties of Negation	47
6. Syntactic Equivalence	47
§ 8. Relations between Classical and Intuitionistic Predicate Calculus	48
1. Embedding IP3 in CP	48
2. Interpretation of CP in IP3	49
§ 9. The Interpolation Theorem	51
1. Interpolation Theorem for the System IP3	51
2. Interpolation Theorem for the System CP	54
3. Finitely Axiomatisable Theories	54
4. Beth's Definability Theorem	55
Chapter IV. Classical Simple Type Theory	56
§ 10. The Formal System CT	56
1. The Formal Language	56
2. Chains of Subterms	57
3. Axioms and Basic Inferences	60
4. Deducible Formulas and Permissible Inferences	60
5. The Cut Rule	62
§ 11. Deduction Chains and Partial Valuations	62
1. Definition of Deduction Chains	62
2. Partial Valuations	63
3. Principal Lemmata	64
§ 12. Semantics	65
1. Total Valuations over a System of Sets	65
2. Soundness Theorem	66

3. Extending a Partial Valuation	67
4. Completeness Theorem and Cut Rule	69
Part B. Systems of Arithmetic	71
Chapter V. Ordinal Numbers and Ordinal Terms	73
§ 13. Theory of Ordinals of the 1st and 2nd Number Classes	73
1. Order Types of Well-Ordered Sets	73
2. Axiomatic Characterization of the 1st and 2nd Number Classes	74
3. Zero, Successor and Limit Numbers and Supremum	75
4. Ordering Functions	76
5. Addition of Ordinals	79
6. α -Critical Ordinals	81
7. Maximal α -Critical Ordinals	84
§ 14. A Notation System for the Ordinals $< \Gamma_0$	86
1. Definition of Ordinal Terms	86
2. The Ordering of the Ordinal Terms	88
3. Addition of Ordinal Terms	89
4. Ordinal Terms $\phi\alpha\beta$	90
5. Ordinal Terms ω^α , $\omega^\alpha \cdot n$ and $\omega^\alpha \cdot \beta$	92
6. Ordinal Terms $n \cdot \beta$, 2^α and $2^\alpha \cdot \beta$	94
7. Ordinal Terms ε_α , $\omega_n(\alpha)$ and ζ_n	95
8. A Mapping onto the Natural Numbers	96
Chapter VI. Functionals of Finite Type	98
§ 15. The System of Terms of Finite Type.	98
1. Types	98
2. Terms	98
3. Interpretation	99
4. Reduction Procedure for Terms	100
5. Characterization of Numerals	101
6. Substitution Properties	101
7. The Normal Form of a Term	104
§ 16. Orders of Terms	105
1. Natural Sum and Natural Product of Ordinal Terms	105
2. Assigning Ordinal Terms to Terms	106
3. Estimates of the Order of Terms	108
4. Equality of Terms	112
§ 17. The Formal System FT of Functionals of Finite Type.	113
1. The Formal Language	113
2. Deduction Procedures	114
3. The Consistency of the System FT	115
4. Fundamental Deduction Rules	117

5. Addition and Multiplication	120
6. The Identity Functional I_τ and λ -Abstraction	121
7. The Predecessor Functional and the Arithmetic Difference	122
8. The Recursor	124
9. Simultaneous Recursion	126
10. The Characteristic Term of a Basic Formula	129
 Chapter VII. Pure Number Theory	134
§ 18. The Formal System PN for Pure Number Theory	134
1. The Formal Language	134
2. The Deduction Procedure	135
3. Basic Properties of Deducibility	136
4. Properties of Negation	138
5. Positive and Negative Parts of Formulas	142
6. The Consistency of the System PN	147
§ 19. Interpretation of PN in FT	148
1. Sequences of Terms of the System FT	148
2. The Formal System QFT	149
3. Interpreting Formulas	155
4. Interpretations of the Axioms of the System PN	157
5. Interpretations of the Basic Inferences in the System PN	158
 Part C. Subsystems of Analysis	165
 Chapter VIII. Predicative Analysis	167
§ 20. Systems of Δ_1^1 -Analysis	167
1. The Formal Language of Second Order Arithmetic	167
2. The Formal System DA	170
3. Deducible Formulas and Permissible Inference of the System DA	171
4. The Semi-Formal System DA*	174
5. Embedding DA in DA*	175
6. General Properties of Deduction in the System DA*	176
7. Subsystems of DA and DA*	176
§ 21. Deductions of Transfinite Induction	177
1. Formalisation of Transfinite Induction	177
2. Deductions in EN	179
3. Deductions in EN*	181
4. Deductions in EA and EA*	182
5. The Formula $\mathcal{R}[P, Q, t]$	184
6. Deductions in DA	188
7. Deductions in DA*	192
§ 22. The Semi-Formal System RA* for Ramified Analysis	197
1. The Formal Language	197

2. The Deduction Procedures	200
3. Weak Inferences	201
4. Elimination of Cuts	201
5. Further Properties of Deductions	204
6. Interpretations of EA^* and DA^* in RA^*	207
§ 23. The Limits of the Deducibility of Transfinite Induction	209
1. Orders of Deductions of Induction in RA^*	209
2. The Limiting Numbers of the Systems EN , EA and DA	211
3. The Autonomous Ordinal Terms of the Systems EN^* , EA^* and DA^*	213
4. The Autonomous Ordinal Terms of the System RA^*	217
5. The Limits of Predicativity	220
Chapter IX. Higher Ordinals and Systems of Π_1^1 -Analysis	221
§ 24. Normal Functions on a Segment $\mathbb{O}^*$ of the Ordinals	221
1. Axiomatic Characterization of the Segment $\mathbb{O}^*$ of the Ordinals	221
2. Basic Properties of $\mathbb{O}^*$	222
3. Definition of the Functions θ_α	224
4. Properties of the θ Functions	225
5. The Sets $\bar{In}(\alpha)$ and Functions $\bar{\theta}_\alpha$	230
§ 25. A Notation System for Ordinals Based on the θ_α Functions	234
1. The Set $\bar{\theta}(\Omega)$ of Ordinals	234
2. Sets of Coefficients	234
3. The Systems T^* and OT^* of Terms	236
4. Subsystems $\bar{\theta}(\tau)$ of $\bar{\theta}(\Omega)$	238
5. The Ordinal A_0	239
6. Relations between $Cr(\alpha)$ and $In(\alpha)$	240
§ 26. Level-Lowering Functions of the Ordinals	241
1. Basic Concepts	242
2. Properties of the Sets of Coefficients	242
3. The Ordinal Term $d_{i\alpha}$	245
4. The Natural Sum	248
5. Deduction Functions	248
§ 27. The Formal System GPA for a Generalized Π_1^1 -Analysis	252
1. The Formal Language	252
2. Axioms, Basic Inference and Substitution Inferences	253
3. Deductions	255
4. Orders of Normal Deductions	257
5. Transformations of Normal Deductions	258
6. Reducible Normal Deductions	259
7. Singular Normal Deductions	261
8. Reduction of a Suitable Cut	262
9. The Consistency of the System GPA	268
10. The Subsystem PA of GPA	268

§ 28. The Semi-Formal System PA^*	269
1. Axioms and Basic Inferences of the System PA^*	269
2. The Strength of a Formula	270
3. Basic Deductions in the System PA^*	271
4. Embedding of PA in PA^*	272
5. Elimination of Strong Cuts in PA^*	273
6. Normal Deductions in the System PA^*	275
7. Reducible Normal Deductions	277
8. Elimination of Cuts in PA^*	278
§ 29. Proof of Well-Ordering	281
1. A Constructive Proof of Well-Ordering for Subsystems of $\bar{\theta}(\Omega)$	281
2. The Formal System ID_n of n -Fold Iterated Inductive Definitions	285
3. Formalization of the Proof of Well-Ordering of $\bar{\theta}(N)$ in ID_N	287
4. Embedding ID_n in a Subsystem of PA	289
