

Contents

Preliminaries	9
Chapter 1	
The Möbius Function	11
1. Incidence Algebra	12
2. The Principle of Inclusion-Exclusion	14
3. Möbius Inversion	16
4. Möbius Numbers	18
5. Ideal Relations	22
6. Galois Connections	26
7. Euler-Poincaré Formula	30
Chapter 2	
Diagram Cohomology of Posets	33
1. A Short Review of Homological Algebra	33
2. Cohomology of Diagrams	43
3. The Grothendieck Spectral Sequence	55
4. The Leray Spectral Sequence	64
Chapter 3	
Quillen's Theorem	68
1. Geometric Realization	69
2. Topological Preliminaries	72
3. First Applications of the Topological Concepts ..	76
4. Order-Homotopy Maps	78
5. Crapo's Complementation Theorem	80
6. Quillen's Theorem	81
7. Dismantlable Posets	84
8. Rota's Cross-Cut Theorem	86
Chapter 4	
Möbius Algebras and a Riemann-Roch-Type Theorem .	88
1. Möbius Algebras	88
2. A Riemann-Roch-Type Theorem	98

Chapter 5

Cohen-Macaulay and Shellable Posets	105
1. Cohen-Macaulay K-Algebras	105
2. Stanley-Reisner Rings	108
3. The Theorem of Reisner	113
4. The Upper Bound Conjecture for Spheres	118
5. Shellability	122
6. Lexicographic Shellability	127
7. Examples and Concluding Remarks	135

Appendix

Homological Properties of Classification Problems	139
1. Basic Properties of Classification Problems	139
2. Colored Posets	142
3. Topology of $\text{Cond}(S)$, $\text{Pure}(K)$ and $\text{Mix}(K)$	146
4. Decision Graphs and Connections to the Topology of $\text{Mix}(K)$ and $\text{Cond}(S)$	147
5. The Euler-Poincaré Characteristic	149
6. Examples	151
Literature	159
Index	163
