|                                                                       |     |
|-----------------------------------------------------------------------|-----|
| Chapter 0. Prerequisites . . . . .                                    | 1   |
| Chapter I. Vector spaces . . . . .                                    | 5   |
| § 1. Vector spaces . . . . .                                          | 5   |
| § 2. Linear mappings . . . . .                                        | 16  |
| § 3. Subspaces and factor spaces . . . . .                            | 22  |
| § 4. Dimension . . . . .                                              | 32  |
| § 5. The topology of a real finite dimensional vector space . . . . . | 37  |
| Chapter II. Linear mappings . . . . .                                 | 41  |
| § 1. Basic properties . . . . .                                       | 41  |
| § 2. Operations with linear mappings . . . . .                        | 51  |
| § 3. Linear isomorphisms . . . . .                                    | 54  |
| § 4. Direct sum of vector spaces . . . . .                            | 55  |
| § 5. Dual vector spaces . . . . .                                     | 62  |
| § 6. Finite dimensional vector spaces . . . . .                       | 75  |
| Chapter III. Matrices . . . . .                                       | 82  |
| § 1. Matrices and systems of linear equations . . . . .               | 82  |
| § 2. Multiplication of matrices . . . . .                             | 88  |
| § 3. Basis transformation . . . . .                                   | 91  |
| § 4. Elementary transformations . . . . .                             | 94  |
| Chapter IV. Determinants . . . . .                                    | 98  |
| § 1. Determinant functions . . . . .                                  | 98  |
| § 2. The determinant of a linear transformation . . . . .             | 101 |
| § 3. The determinant of a matrix . . . . .                            | 105 |
| § 4. Dual determinant functions . . . . .                             | 108 |
| § 5. Cofactors . . . . .                                              | 110 |
| § 6. The characteristic polynomial . . . . .                          | 116 |
| § 7. The trace . . . . .                                              | 122 |
| § 8. Oriented vector spaces . . . . .                                 | 127 |
| Chapter V. Algebras . . . . .                                         | 139 |
| § 1. Basic properties . . . . .                                       | 139 |
| § 2. Ideals . . . . .                                                 | 153 |
| § 3. Change of coefficient field of a vector space . . . . .          | 158 |
| Chapter VI. Gradations and homology . . . . .                         | 162 |
| § 1. $G$ -graded vector spaces . . . . .                              | 162 |
| § 2. $G$ -graded algebras . . . . .                                   | 169 |
| § 3. Differential spaces and differential algebras . . . . .          | 173 |
| Chapter VII. Inner product spaces . . . . .                           | 181 |
| § 1. The inner product . . . . .                                      | 181 |
| § 2. Orthonormal bases . . . . .                                      | 186 |

|                                                                        |            |
|------------------------------------------------------------------------|------------|
| § 3. Normed determinant functions . . . . .                            | 190        |
| § 4. Duality in an inner product space . . . . .                       | 198        |
| § 5. Normed vector spaces . . . . .                                    | 200        |
| <b>Chapter VIII. Linear mappings of inner product spaces . . . . .</b> | <b>204</b> |
| § 1. The adjoint mapping . . . . .                                     | 204        |
| § 2. Selfadjoint mappings . . . . .                                    | 209        |
| § 3. Orthogonal projections . . . . .                                  | 214        |
| § 4. Skew mappings . . . . .                                           | 217        |
| § 5. Isometric mappings . . . . .                                      | 220        |
| § 6. Rotations of the plane and of 3-space . . . . .                   | 225        |
| § 7. Differentiable families of linear automorphisms . . . . .         | 232        |
| <b>Chapter IX. Symmetric bilinear functions . . . . .</b>              | <b>244</b> |
| § 1. Bilinear and quadratic functions . . . . .                        | 244        |
| § 2. The decomposition of $E$ . . . . .                                | 248        |
| § 3. Pairs of symmetric bilinear functions . . . . .                   | 255        |
| § 4. Pseudo-Euclidean spaces . . . . .                                 | 264        |
| § 5. Linear mappings of Pseudo-Euclidean spaces . . . . .              | 271        |
| <b>Chapter X. Quadrics . . . . .</b>                                   | <b>279</b> |
| § 1. Affine spaces . . . . .                                           | 279        |
| § 2. Quadrics in the affine space . . . . .                            | 284        |
| § 3. Affine equivalence of quadrics . . . . .                          | 293        |
| § 4. Quadrics in the Euclidean space . . . . .                         | 299        |
| <b>Chapter XI. Unitary spaces . . . . .</b>                            | <b>308</b> |
| § 1. Hermitian functions . . . . .                                     | 308        |
| § 2. Unitary spaces . . . . .                                          | 310        |
| § 3. Linear mappings of unitary spaces . . . . .                       | 314        |
| § 4. Unitary mappings of the complex plane . . . . .                   | 320        |
| § 5. Application to the orthogonal group . . . . .                     | 324        |
| § 6. Application to Lorentz-transformations . . . . .                  | 331        |
| <b>Chapter XII. Polynomial algebra . . . . .</b>                       | <b>338</b> |
| § 1. Basic properties . . . . .                                        | 338        |
| § 2. Ideals and divisibility . . . . .                                 | 344        |
| § 3. Products of relatively prime polynomials . . . . .                | 353        |
| § 4. Factor algebras . . . . .                                         | 357        |
| § 5. The structure of factor algebras . . . . .                        | 360        |
| <b>Chapter XIII. Theory of a linear transformation . . . . .</b>       | <b>368</b> |
| § 1. Polynomials in a linear transformation . . . . .                  | 368        |
| § 2. Generalized eigenspaces . . . . .                                 | 375        |
| § 3. Cyclic spaces and irreducible spaces . . . . .                    | 382        |
| § 4. Application of cyclic spaces . . . . .                            | 397        |
| § 5. Nilpotent and semisimple transformations . . . . .                | 406        |
| § 6. Applications to inner product spaces . . . . .                    | 419        |
| <b>Bibliography . . . . .</b>                                          | <b>428</b> |
| <b>Subject Index . . . . .</b>                                         | <b>430</b> |
